## SOLUTION MANUAL FOR

Data Analytics for Accounting, 3rd Edition Richardson

### Chapter 1-9

#### Solutions Manual – Chapter 1

##### Solutions to Multiple Choice Questions

1. (LO 1-1) Big Data is often described by the four Vs, or

- a. volume, velocity, veracity, and variability.
- b. volume, velocity, veracity, and variety.
- c. volume, volatility, veracity, and variability.
- d. variability, velocity, veracity, and variety.

Answer: b

2. LO 1-4) Which data approach attempts to assign each unit in a population into a small set of classes (or groups) where the unit best fits?

- a. Regression
- b. Similarity matching
- c. Co-occurrence grouping
- d. Classification

Answer: d

3. (LO 1-4) Which data approach attempts to identify similar individuals based on data known about them?

- a. Classification
- b. Regression
- c. Similarity matching
- d. Data reduction

Answer: c

4. (LO 1-4) Which data approach attempts to predict connections between two data items?

- a. Profiling
- b. Classification
- c. Link prediction
- d. Regression

DumpTorrent offers authentic and actual Analytics-Arch-201 dumps that every candidate can rely on for good preparation. Our top priority is to give you the most reliable prep material that helps you pass the Analytics-Arch-201 Exam on the first attempt. In addition, we offer up to three months of free Salesforce Certified Tableau Architect questions updates.

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Monitor and Maintain a Tableau Deployment:</b> This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Deploy Tableau Server:</b> This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li> </ul>

## Salesforce Certified Tableau Architect Sample Questions (Q192-Q197):

### NEW QUESTION # 192

When configuring an external repository for Tableau Server, which of the following steps is essential for ensuring secure and efficient access to the repository?

- **A. Use a dedicated service account with restricted permissions for repository access**
- B. Configure a direct VPN connection between the Tableau Server and the external repository
- C. Implement repository partitioning based on user roles and permissions in Tableau
- D. Set the repository to allow anonymous access for ease of connectivity

**Answer: A**

Explanation:

Use a dedicated service account with restricted permissions for repository access Utilizing a dedicated service account with restricted permissions is crucial for maintaining security while accessing an external repository. This ensures that Tableau Server interacts with the repository in a controlled manner, reducing the risk of unauthorized access or data breaches. Option A is incorrect because allowing anonymous access compromises security and is not recommended for external repositories. Option B is incorrect as a direct VPN connection, while secure, is not a necessary step for configuring an external repository in Tableau Server. Option C is incorrect because repository partitioning based on user roles and permissions is not a standard feature or requirement for Tableau Server's external repository configuration.

### NEW QUESTION # 193

After installing Tableau Server on a Windows system, you find that the server is not accessible from client machines in the network. What should be your first step in troubleshooting this network accessibility issue?

- A. Upgrading the client machines to a compatible operating system version
- **B. Configuring a static IP address for the Windows server hosting Tableau Server**

- C. Reinstalling the network drivers on the Windows server hosting Tableau Server
- **D. Checking the Windows server's firewall settings to ensure the necessary ports for Tableau Server are open**

**Answer: D**

Explanation:

Checking the Windows server's firewall settings to ensure the necessary ports for Tableau Server are open When Tableau Server on a Windows system is not accessible from client machines, the first troubleshooting step should be to check the server's firewall settings. Ensuring that the necessary ports for Tableau Server are open is crucial for network accessibility. Firewall settings that block these ports can prevent client machines from accessing the server. Option A is incorrect because reinstalling network drivers, while it can solve some connectivity issues, is not the first step to check for server accessibility problems. Option C is incorrect as upgrading client machines' operating systems does not directly address server accessibility issues. Option D is incorrect because setting a static IP address for the server, while helpful for network management, is not the primary concern in addressing accessibility issues.

#### NEW QUESTION # 194

During the installation of Tableau Server on Linux, which action is crucial to ensure proper system group and file system permissions are set?

- A. Disabling the Linux system's firewall to prevent it from interfering with file permissions
- **B. Creating a dedicated Tableau user and group, and setting appropriate ownership and permissions on the Tableau directories**
- C. Assigning the Tableau Server user to the root group to ensure full system access
- D. Configuring all users on the Linux system to have administrative privileges for the duration of the Tableau Server installation

**Answer: B**

Explanation:

Creating a dedicated Tableau user and group, and setting appropriate ownership and permissions on the Tableau directories For a successful Tableau Server installation on Linux, it's crucial to create a dedicated Tableau user and group. Setting appropriate ownership and permissions on the Tableau directories ensures that Tableau Server has the necessary access rights to operate correctly while maintaining the security and integrity of the system. Option A is incorrect because assigning the Tableau Server user to the root group poses significant security risks and is not recommended. Option C is incorrect as giving all users administrative privileges is unnecessary for Tableau Server installation and could compromise system security. Option D is incorrect because disabling the firewall does not affect file system permissions and is not a recommended practice during installation.

#### NEW QUESTION # 195

A large enterprise with high user concurrency and extensive data analysis needs is configuring its Tableau Server. What is the most appropriate process count configuration for this scenario?

- A. Maximizing the number of Data Server processes while minimizing other processes
- B. Focusing solely on increasing the number of Backgrounder processes
- **C. Balancing the number of VizQL, Data Server, and Backgrounder processes to support user concurrency and data analysis needs**
- D. Configuring a minimal number of backgrounders and VizQL processes to reduce server load

**Answer: C**

Explanation:

Balancing the number of VizQL, Data Server, and Backgrounder processes to support user concurrency and data analysis needs A balanced configuration of VizQL, Data Server, and Backgrounder processes ensures efficient handling of high user concurrency and data processing demands, optimizing performance and responsiveness. Option A is incorrect because a minimal configuration could lead to performance bottlenecks due to high user demand. Option B is incorrect as focusing only on Data Server processes neglects the needs for visualization and background tasks. Option D is incorrect because focusing solely on Backgrounder processes ignores the needs for user interaction and data querying.

#### NEW QUESTION # 196

When installing and configuring the Resource Monitoring Tool (RMT) server for Tableau Server, which aspect is crucial to ensure

effective monitoring?

- A. Setting up RMT to automatically restart Tableau Server services when performance thresholds are exceeded
- **B. Installing RMT agents on each node of the Tableau Server cluster**
- C. Configuring RMT to monitor all network traffic to and from the Tableau Server
- D. Ensuring RMT server has a dedicated database for storing monitoring data

**Answer: B**

Explanation:

Installing RMT agents on each node of the Tableau Server cluster For the Re-source Monitoring Tool to effectively monitor a Tableau Server deployment, it is essential to install RMT agents on each node of the Tableau Server cluster. This ensures comprehensive monitoring of system performance, resource usage, and potential issues across all components of the cluster. Option A is incorrect because monitoring all network traffic is not the primary function of RMT; it is focused more on system performance and resource utilization. Option B is incorrect as having a dedicated database for RMT is beneficial but not crucial for the basic monitoring functionality. Option C is incorrect because automatic restart of services is not a standard or recommended feature of RMT and could lead to unintended disruptions.
