

# CWSP-208 Relevant Answers | Valid CWSP-208 Test Voucher

## Question: 3

What 802.11 WLAN security problem is directly addressed by mutual authentication?

- A. Wireless hijacking attacks
- B. Weak password policies
- C. MAC spoofing
- D. Disassociation attacks
- E. Offline dictionary attacks
- F. Weak Initialization Vectors

Answer: A

## Question: 4

ABC Company uses the wireless network for highly sensitive network traffic. For that reason, they intend to protect their network in all possible ways. They are continually researching new network threats and new preventative measures. They are interested in the security benefits of 802.11w, but would like to know its limitations.

What types of wireless attacks are protected by 802.11w? (Choose 2)

- A. RF DoS attacks
- B. Layer 2 Disassociation attacks
- C. Robust management frame replay attacks
- D. Social engineering attacks

Answer: B, C

## Question: 5

You are configuring seven APs to prevent common security attacks. The APs are to be installed in a small business and to reduce costs, the company decided to install all consumer-grade wireless routers. The wireless routers will connect to a switch, which connects directly to the Internet connection providing 50 Mbps of Internet bandwidth that will be shared among 53 wireless clients and 17 wired clients. To ensure the wireless network is as secure as possible from common attacks, what security measure can you implement given only the hardware referenced?

- A. WPA-Enterprise
- B. 802.1X/EAP-PEAP
- C. WPA2-Enterprise
- D. WPA2-Personal

2026 Latest SureTorrent CWSP-208 PDF Dumps and CWSP-208 Exam Engine Free Share: <https://drive.google.com/open?id=1RmtE2fpJKQm0Rv3KDO2P06RxBIUvH7Jv>

We stress the primacy of customers' interests on our CWSP-208 training quiz, and make all the preoccupation based on your needs. We assume all the responsibilities our CWSP-208 practice materials may bring. They are a bunch of courteous staff waiting for offering help 24/7. You can definitely contact them when getting any questions related with our CWSP-208 Study Materials. And our staffs will help you in the first time with the most professional knowledge.

The SureTorrent is committed to helping you crack the CWNP CWSP-208 certification exam on the first attempt. To get this objective we offer the most probable, real, and updated CWNP Certified Wireless Security Professional (CWSP) exam dumps in three user-friendly formats. These formats of Certified Wireless Security Professional (CWSP) in Procurement and Supply CWNP updated practice material are, Certified Wireless Security Professional (CWSP) CWSP-208 in Procurement and Supply CWNP PDF file, desktop CWNP CWSP-208 practice test software, and CWNP CWSP-208 web-based practice test.

## Valid CWSP-208 Test Voucher, Pass Leader CWSP-208 Dumps

Comparing to the training institution, our website can ensure you pass the CWNP actual test with less time and money. You just need to use spare time to practice the CWSP-208 exam questions and remember key points of test answers. If you get a bad result in the CWSP-208 Practice Test, we will full refund you to reduce the loss of your money.

## CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q12-Q17):

### NEW QUESTION # 12

When used as part of a WLAN authentication solution, what is the role of LDAP?

- A. A data retrieval protocol used by an authentication service such as RADIUS
- B. An Authentication Server (AS) that communicates directly with, and provides authentication for, the Supplicant.
- C. An IEEE X.500 standard compliant database that participates in the 802.1X port-based access control process
- D. A role-based access control protocol for filtering data to/from authenticated stations.
- E. A SQL compliant authentication service capable of dynamic key generation and distribution

**Answer: A**

Explanation:

LDAP (Lightweight Directory Access Protocol) is used to query and retrieve user credential information from a directory service (like Microsoft Active Directory).

It's not an authentication protocol itself but is used by services like RADIUS to validate user credentials during the EAP authentication process.

Incorrect:

B). LDAP is not directly compliant with X.500-it uses a simplified subset.

C). LDAP is not a SQL-compliant protocol.

D). LDAP is not a role-based access control mechanism.

E). LDAP is not an Authentication Server by itself.

CWNP AAA Architecture Overview

### NEW QUESTION # 13

The IEEE 802.11 Pairwise Transient Key (PTK) is derived from what cryptographic element?

- A. Group Master Key (GMK)
- B. Group Temporal Key (GTK)
- C. Pairwise Master Key (PMK)
- D. Phase Shift Key (PSK)
- E. PeerKey (PK)
- F. Key Confirmation Key (KCK)

**Answer: C**

Explanation:

The PTK (Pairwise Transient Key) is derived during the 4-Way Handshake using:

PMK (from PSK or EAP authentication)

ANonce and SNonce (nonces from authenticator and supplicant)

MAC addresses of client and AP

The PTK is then split into keys used for encryption and integrity protection.

Incorrect:

A). PSK can derive the PMK, but not the PTK directly.

B). GMK is used to derive the GTK, not PTK.

D). GTK is for group traffic encryption.

E & F. PK and KCK are components of PTK or alternate key usage-not used to derive PTK.

CWSP-208 Study Guide, Chapter 3 (PTK Derivation and Usage)

IEEE 802.11i-2004 Key Hierarchy

### NEW QUESTION # 14

When using a tunneled EAP type, such as PEAP, what component is protected inside the TLS tunnel so that it is not sent in clear text across the wireless medium?

- A. X.509 certificates
- **B. User credentials**
- C. RADIUS shared secret
- D. Server credentials

**Answer: B**

Explanation:

In tunneled EAP types (e.g., PEAP, EAP-TTLS):

A secure TLS tunnel is first established using the server's certificate.

Then, user credentials (e.g., username/password) are sent through the encrypted tunnel to ensure confidentiality.

Incorrect:

A). Certificates are exchanged during tunnel establishment, not protected within it.

C). Server credentials are used to establish the tunnel, not protected inside it.

D). The RADIUS shared secret secures communication between AP/controller and RADIUS server-not sent via the tunnel.

IEEE 802.1X and EAP Specifications

### NEW QUESTION # 15

Given: XYZ Hospital plans to improve the security and performance of their Voice over Wi-Fi implementation and will be upgrading to 802.11n phones with 802.1X/EAP authentication. XYZ would like to support fast secure roaming for the phones and will require the ability to troubleshoot reassociations that are delayed or dropped during inter-channel roaming.

What portable solution would be recommended for XYZ to troubleshoot roaming problems?

- A. WIPS sensor software installed on a laptop computer
- B. Spectrum analyzer software installed on a laptop computer
- C. An autonomous AP mounted on a mobile cart and configured to operate in monitor mode
- **D. Laptop-based protocol analyzer with multiple 802.11n adapters**

**Answer: D**

Explanation:

For troubleshooting fast roaming (e.g. 802.11r) across channels, a portable protocol analyzer with dual- or multi-band 802.11n adapters enables:

Simultaneous packet capture on different channels

Capturing handoff-related frames and timing analysis in roaming scenarios This setup allows detailed capture of reassociation, authentication, and 4-Way Handshake processes, essential for diagnosing roaming delays.

Other options (WIPS, spectrum analyzer, autonomous AP) do not support detailed 802.11 frame capture across multiple channels during roaming events.

CWSP#207 Study Guide, Chapter 6 (Roaming Troubleshooting)

### NEW QUESTION # 16

A WLAN is implemented using WPA-Personal and MAC filtering.

To what common wireless network attacks is this network potentially vulnerable? (Choose 3)

- **A. MAC Spoofing**
- **B. DoS**
- **C. Offline dictionary attacks**
- D. ASLEAP

**Answer: A,B,C**

Explanation:

This network uses WPA-Personal (Pre-Shared Key) and MAC filtering. While it does offer some basic protections, it is still vulnerable to several well-known attack vectors:

A). Offline dictionary attacks: An attacker can capture the 4-way handshake and perform offline dictionary or brute-force attacks to guess the PSK.

B). MAC Spoofing: Since MAC filtering is based on easily observed MAC addresses, attackers can spoof an authorized MAC address.

D). DoS: Attacks such as deauthentication floods or RF jamming can deny users access without needing to break encryption.

Incorrect:

C). ASLEAP: This is specific to LEAP (a weak EAP type), which is not used in WPA-Personal.

## NEW QUESTION # 17

.....

The data for our CWSP-208 practice materials that come up with our customers who have bought our CWSP-208 actual exam and provided their scores show that our high pass rate is 98% to 100%. This is hard to find and compare with in the market. And numerous enthusiastic feedbacks from our worthy clients give high praises not only on our CWSP-208 Study Guide, but also on our sincere and helpful 24 hours customer services online. You will feel grateful to choose our CWSP-208 learning quiz!
