

Exam EXIN CDCP Score & CDCP Latest Practice Questions

DOWNLOAD the newest Actual4dump CDCP PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1bDm-1s2NheXe3G1YbUfUX1DVu047tRzv>

Our CDCP study materials are the best choice in terms of time and money. And all contents of CDCP training prep are made by elites in this area. Furthermore, CDCP Quiz Guide gives you 100 guaranteed success and free demos. To fit in this amazing and highly accepted CDCP Exam, you must prepare for it with high-rank practice materials like our CDCP study materials. We can ensure your success on the coming exam and you will pass the CDCP exam just like the others.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Fire Safety• Protection: This topic gives an understanding of standards for fire suppression, detection systems, total flooding fire suppression techniques, and handheld extinguishers. Additionally, it covers Signage and safety.
Topic 2	<ul style="list-style-type: none">• Power Infrastructure: It focuses ATS and STS systems, redundancy levels and techniques, static and dynamic UPS systems, battery types, thermo-graphics, and renewable energy factor (REF).
Topic 3	<ul style="list-style-type: none">• Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.
Topic 4	<ul style="list-style-type: none">• Equipment Racks: It discusses power rail• strip options, security considerations, and rack standards, properties and selection criteria.
Topic 5	<ul style="list-style-type: none">• Water Supply: This topic is all about water supply techniques and application areas.
Topic 6	<ul style="list-style-type: none">• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 7	<ul style="list-style-type: none">• Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 8	<ul style="list-style-type: none">• Auxiliary Systems: The topic covers water leak detection systems, data centre monitoring requirements, EMS, BMS and DCIM.

Topic 9	<ul style="list-style-type: none"> • Raised Floor • Suspended Ceiling: The topic discusses applicable standards, signal reference grid, and disability act and regulations.
Topic 10	<ul style="list-style-type: none"> • Designing a Scalable Network Infrastructure: It covers ANSI • TIA-942 cabling hierarchy, network redundancy, structured Cabling System, and planning considerations.

CDCP Actual Lab Questions & CDCP Certification Training & CDCP Pass Ratio

The EXIN CDCP certification examination is an essential component of professional development, and passing this EXIN CDCP test can increase career options and a rise in salary. Nonetheless, getting ready for the Certified Data Centre Professional (CDCP) (CDCP) exam may be difficult, and many working professionals have trouble locating the EXIN CDCP practice questions they need to succeed in this endeavor.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q46-Q51):

NEW QUESTION # 46

What is the minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems?

- A. 64 cm / 25 inches
- B. 120 cm / 47 inches
- C. 60 cm / 24 inches
- **D. 46 cm / 18 inches**

Answer: D

Explanation:

The minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems is 46 cm / 18 inches, according to the CDCP Preparation Guide¹ and OSHA regulation 29 CFR

1910.159 (10)². This clearance space is necessary to ensure that the sprinkler spray or gas discharge can reach the fire and cover the protected area effectively. Any material or obstruction below this clearance space can interfere with the sprinkler or gas distribution and reduce the fire suppression performance. Therefore, building owners and managers should ensure that all storage and objects in the data centre are kept below this clearance space, and that the clearance space is maintained at all times.

NEW QUESTION # 47

When dealing with glass door racks, cool air is injected into the rack from:

- A. The front door in a downflow direction.
- B. The bottom of the rack.
- **C. The rear door in a downflow direction.**
- D. The top of the rack through the fans and vents mounted inside the rack.

Answer: C

Explanation:

Glass door racks are a type of rack that have solid glass front doors and rear door heat exchangers (RDHx).

RDHx are devices that use facility coolant to absorb heat from the exhaust air of the IT equipment and return cool air to the room.

RDHx can be either passive or active, depending on the fan configuration. In general, IT hardware within the rack is air-cooled and the door heat exchanger uses facility coolant to absorb heat from exhaust air to return air to the facility at or near inlet air temperature

to the rack. This rear door heat exchanger can either be a passive or active solution. When dealing with glass door racks, cool air is injected into the rack from the rear door in a downflow direction. This means that the cool air flows from the top to the bottom of the rack, following the natural convection of the hot air rising. This way, the cool air can reach all the IT equipment in the rack and prevent hot spots or overheating.

NEW QUESTION # 48

The three elements of the fire triangle are, and. (Choose three.)

- A. Earth
- B. Fuel
- C. Heat
- D. Oxygen
- E. Water

Answer: B,C,D

Explanation:

The fire triangle is a simple model that illustrates the three elements that a fire needs to ignite and sustain:

oxygen, heat, and fuel. Oxygen is the oxidizing agent that enables the combustion reaction, heat is the energy source that raises the temperature of the fuel to its ignition point, and fuel is the material that reacts with oxygen and releases heat and light. Removing any one of these elements can extinguish a fire. For example, water can reduce the heat and the oxygen, sand or soil can smother the fuel and the oxygen, and fire extinguishers can displace the oxygen or lower the temperature.

NEW QUESTION # 49

What type of heat does ICT equipment generate?

- A. Radiant heat
- B. Both latent and sensible heat
- C. Latent heat
- D. Sensible heat

Answer: D

Explanation:

According to the Certified Data Centre Professional (CDCP) reference materials, ICT (Information and Communication Technology) equipment such as servers, switches, and storage devices generate sensible heat.

Sensible heat is the heat energy that causes a change in temperature of the air but does not contribute to humidity or moisture content. This is in contrast to latent heat, which involves a change in moisture (humidity) in the air, such as from evaporation or condensation.

ICT equipment does not introduce moisture into the environment; it only raises the temperature of the surrounding air, making it sensible heat. Proper data center cooling focuses on removing this sensible heat load to maintain optimal equipment operating conditions. Latent heat loads, such as those from people or water leaks, are typically not generated by ICT equipment and are managed differently in facility design.

Radiant heat is a minor consideration and typically refers to heat transferred by electromagnetic waves (e.g., from sunlight or hot surfaces), not the primary mode of heat transfer from ICT equipment, which is primarily through convection (airflow) and is measured as sensible heat.

NEW QUESTION # 50

is the ability of a system or component to perform its required functions under stated conditions for a specified period of time.

- A. Availability
- B. Scalability
- C. Agility
- **D. Reliability**

Answer: D

Explanation:

According to the IEEE definition, reliability is the ability of a system or component to perform its required functions under stated conditions for a specified period of time. Reliability is a measure of how often a system or component fails, and how long it takes to recover from a failure. Reliability is closely related to availability, which is the degree to which a system or component is operational and accessible when required for use. Reliability and availability are both affected by factors such as design, maintenance, testing, and environmental conditions.

NEW QUESTION # 51

.....

Since our Certified Data Centre Professional (CDCP) practice exam tracks your progress and reports results, you can review these results and strengthen your weaker concepts. We offer EXIN CDCP desktop practice test software which works on Windows computers after installation. The web-based CDCP practice exam needs no plugins or software installation. Linux, iOS, Android, Windows, and Mac support the web-based EXIN CDCP Practice Exam. Additionally, Chrome, Opera, Firefox, Safari, Internet Explorer support this Certified Data Centre Professional (CDCP) CDCP web-based practice test.
