AIGP Latest Materials | Free AIGP Download
To make sure that our candidates can learn the AIGP praparation materials in the least time with the least efforts, they have compiled all of the content to be contained in the shortest possible number of AIGP exam questions. Additionally, the AIGP exam questions and answers have been designed on the format of the real exam so that the candidates learn it without any extra effort. We have carefully considered every aspects for our customers. And our AIGP Practice Braindumps are perfect in every detail.

IAPP AIGP Exam Syllabus Topics:

Topic	Details
Topic 1	• Understanding How Laws, Standards, and Frameworks Apply to AI: This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.

Topic 2	• Understanding How to Govern AI Deployment and Use: This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.
Topic 3	• Understanding How to Govern AI Development: This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.
Topic 4	• Understanding the Foundations of AI Governance: This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.

Free IAPP AIGP Download | AIGP Vce Test Simulator

According to the survey, the average pass rate of our candidates has reached 99%. High passing rate must be the key factor for choosing, which is also one of the advantages of our AIGP real study dumps. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. What you need to do first is to choose a right AIGP Exam Material, which will save your time and money in the preparation of the AIGP exam. Our AIGP latest questions is one of the most wonderful reviewing IAPP Certified Artificial Intelligence Governance Professional study training dumps in our industry, so choose us, and together we will make a brighter future.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q95-Q100):

NEW QUESTION # 95
What is the main purpose of accountability structures under the Govern function of the NIST AI Risk Management Framework?

- A. To determine responsibility for allocating budgetary resources.
- B. To enable and encourage participation by external stakeholders.
- C. To empower and train appropriate cross-functional teams.
- D. To establish diverse, equitable and inclusive processes.

Answer: C

Explanation:
The NIST AI Risk Management Framework's Govern function emphasizes the importance of establishing accountability structures that empower and train cross-functional teams. This is crucial because cross-functional teams bring diverse perspectives and expertise, which are essential for effective AI governance and risk management. Training these teams ensures that they are well-equipped to handle their responsibilities and can make informed decisions that align with the organization's AI principles and ethical standards. Reference:
NIST AI Risk Management Framework documentation, Govern function section.

NEW QUESTION # 96
CASE STUDY
A global marketing agency is adapting a large language model ("LLM") to generate content for an upcoming marketing campaign for a client's new product: a hard hat designed for construction workers of any gender to better protect them from head injuries.

The marketing agency is accessing the LLM through an application programming interface ("API") developed by a third-party technology company. They want to generate text to be used for targeted advertising communications that highlight the benefits of the hard hat to potential purchasers. Both the marketing agency and the technology company have taken reasonable steps to address AI governance.

The marketing company has:
* Entered into a contract with the technology company with suitable representations and warranties.
* Completed an impact assessment on the LLM for this intended use.
* Built technical guidance on how to measure and mitigate bias in the LLM.
* Enabled technical aspects of transparency, explainability, robustness and privacy.
* Followed applicable regulatory requirements.
* Created specific legal statements and disclosures regarding the use of the AI on its client's advertising.

The technology company has:
* Provided guidance and resources to developers to address environmental concerns.
* Build technical guidance on how to measure and mitigate bias in the LLM.
* Provided tools and resources to measure bias specific to the LLM.
* Enabled technical aspects of transparency, explainability, robustness and privacy.
* Mapped and mitigated potential societal harms and large-scale impacts.
* Followed applicable regulatory requirements and industry standards.
* Created specific legal statements and disclosures regarding the LLM. including with respect to IP and rights to data.

The marketing company and its tech provider have taken reasonable steps to govern the AI's use, including legal disclosures, impact assessments, and bias mitigation. However, the company wants to take one more step to improve governance and reduce risks related to ongoing oversight and accountability.

While the marketing agency took steps to mitigate its risks, the best additional step would be to:

- A. Negotiate an intellectual property indemnity from the technology company
- B. Evaluate the use of AI in the marketing industry to identify best practices
- C. Establish a governance committee to oversee the project
- D. Engage a third party to lead the procurement selection process

Answer: C

Explanation:
The correct answer is D. Forming a dedicated governance committee ensures continuous oversight, role clarity, and accountability throughout the AI lifecycle.
From the AIGP ILT Guide - Governance Structures:
"Organizations using AI in high-impact scenarios should establish a governance body responsible for oversight of risk, compliance, and ethical alignment." Also reflected in AI Governance in Practice Report 2024:
"Committees support cross-functional decision-making, provide guidance for updates, and maintain accountability. This is especially critical for high-stakes applications like marketing to diverse audiences." Options A, B, and C are valid supplementary actions, but D offers a long-term and systematic governance mechanism.

NEW QUESTION # 97
Under the NIST Al Risk Management Framework, all of the following are defined as characteristics of trustworthy Al EXCEPT?

- A. Explainable and Interpretable.
- B. Accountable and Transparent.
- C. Tested and Effective.
- D. Secure and Resilient.

Answer: A

Explanation:
The NIST AI Risk Management Framework outlines several characteristics of trustworthy AI, including being secure and resilient, explainable and interpretable, and accountable and transparent. While being tested and effective is important, it is not explicitly listed as a characteristic of trustworthy AI in the NIST framework.
The focus is more on the system's ability to function safely, securely, and transparently in a way that stakeholders can understand and

trust. Reference: AIGP Body of Knowledge, NIST AI RMF section.

NEW QUESTION # 98

Scenario:

An enterprise is evaluating multiple third-party generative AI tools to integrate into its platform. As part of its AI governance policy, it is assessing the most effective methods to reduce risks related to bias, data misuse, and liability when using third-party solutions.

All of the following are commonly adopted processes and policies in reducing potential risks introduced by third-party AI tools or applications EXCEPT:

- A. Requiring an independent third-party bias audit for third-party generative AI tools
- B. Requiring new use cases of the generative AI tools or applications to be reviewed and approved by the generative AI governance body
- C. Allowing publicly available information and personally identifiable information (PII) to be incorporated into the prompt
- D. Including clauses in the procurement agreement for buyers of generative AI tools to put certain liabilities on the tool supplier

Answer: C

Explanation:

The correct answer is B. Allowing PII to be freely entered into prompts without safeguards is considered a major privacy and security risk and is not a responsible governance practice.

From the AIGP ILT Guide - Generative AI & Third-Party Risk Management:

"Use of personal or sensitive information in AI prompts can result in unintended exposure, regulatory breaches, and downstream liability." The AI Governance in Practice Report 2025 highlights:

"PII should be minimized or protected by design. Prompt engineering should prevent entry of personally identifiable data unless legally and technically safeguarded." A, C, and D are established best practices under responsible AI procurement and use.

NEW QUESTION # 99

The best method to ensure a comprehensive identification of risks for a new AI model is?

- A. An environmental scan.
- B. Integration testing.
- C. An impact assessment.
- D. Red teaming.

Answer: C

Explanation:

The most comprehensive way to identify a full range of risks - legal, ethical, operational, and societal - for a new AI model is through a formal impact assessment, such as a Data Protection Impact Assessment (DPIA) or Algorithmic Impact Assessment.

From the AI Governance in Practice Report 2025:

"Risk-based approaches are often distilled into organizational risk management efforts, which put impact assessments at the heart of deciding whether harm can be reduced." (p. 29)

"DPIAs... help organizations identify, analyze and minimize data-related risks and demonstrate accountability." (p. 30)

* A. Environmental scan is too general.
* B. Red teaming is useful for adversarial risk but not broad.
* C. Integration testing focuses on technical/system compatibility, not overall risk.
