Our AD0-E725 learning quiz can lead you the best and the fastest way to reach for the certification and achieve your desired higher salary by getting a more important position in the company. Because we hold the tenet that low quality AD0-E725 exam materials may bring discredit on the company. Our AD0-E725 learning questions are undeniable excellent products full of benefits, so our AD0-E725 exam materials can spruce up our own image and our exam questions are your best choice.

Adobe Commerce Developer Expert Sample Questions (Q42-Q47):

NEW QUESTION # 42

A Developer connects to the Magento-Cloud CLI and creates a new branch for environment using the following Git command:
`git checkout -b <branch-name>`

The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. `magento-cloud environment:branch <branch-name>` should be used instead of Git commands.
- B. `magento-cloud environment:redploy --no-wait` should be executed after branch creation.
- C. `git branch -b <branch-name>` should be used instead of Git checkout.

Answer: A

Explanation:

In Adobe Commerce Cloud, simply creating a Git branch locally does not automatically create a corresponding Cloud environment. The correct way is to use:

`magento-cloud environment:branch <branch-name>`

This ensures the environment is created in Cloud, builds automatically, and is linked to the new Git branch.

B redeploys an existing environment but does not create one.

C is just another Git command and does not activate the environment.

NEW QUESTION # 43

An Adobe Commerce Developer creates a before plugin for the `save()` method from the `Magento\Framework\App\Cache\Proxy` class to manipulate cache identifiers and data before it is saved to the cache storage.

An example of the class code is shown below:

```
namespace Magento\Framework\App\Cache;
use Magento\Framework\App\Cache\CacheInterface;
```

```

use Magento\Framework\ObjectManager\NoninterceptableInterface;
class Proxy implements
CacheInterface,
NoninterceptableInterface
{
...
public function save($data, $identifier, $tags = [], $lifeTime = null)
{
return $this->getCache()->save($data, $identifier, $tags, $lifeTime);
}
...
}

```

Why is the plugin not working as expected?

- A. An around plugin defined for the same function prevents the execution.
- **B. The plugin cannot be created for this class.**
- C. An after plugin defined for the same function affects the results.

Answer: B

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is A. The plugin cannot be created for this class.

The reason is that Magento\Framework\App\Cache\Proxy implements the NoninterceptableInterface.

* Any class that implements the NoninterceptableInterface in Magento is excluded from the plugin system.

* This means no before, after, or around plugins can be applied to methods of such classes.

* Magento uses this mechanism to protect critical classes (like Proxy classes, Factories, and other infrastructure code) from being intercepted, as doing so could introduce performance or stability issues.

Therefore, the developer's plugin for the save() method does not work, because plugins are not allowed on this class by design.

Options B and C are incorrect because:

* Another plugin (after/around) does not block the execution in this case; the class itself is simply non- interceptable.

Official Documentation Extracts:

* "Plugins cannot be applied to final classes, final methods, non-public methods, or classes that implement Magento\Framework\ObjectManager\NoninterceptableInterface."- Adobe Commerce DevDocs: Plugins limitations

* "Classes implementing NoninterceptableInterface cannot be intercepted. This interface is used to mark classes that must not be extended through the plugin mechanism"- Magento Framework Reference:

NoninterceptableInterface

NEW QUESTION # 44

A Developer needs to subscribe to the customer_register_success event.

How should the observer be declared in the module?

- A. Declare in etc/events.xml:

```

<observer name="customer_register_success">
<event name="vendor_module_customer_register_observer" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>

```
- B. Declare in etc/observer.xml:

```

<observer name="vendor_module_customer_register_observer">
<event name="customer_register_success" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>

```
- **C. Declare in etc/events.xml:**

```

<event name="customer_register_success">
<observer name="vendor_module_customer_register_observer" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</event>

```

Answer: C

NEW QUESTION # 45

An Adobe Commerce Expert is tasked with implementing a custom condition on salable quantity with reservations. The condition needs to be applicable only when added to cart. Which option should the Developer implement?

- A. XML

```
<virtualType name="IsProductSalableForRequestedQtyConditionChainOnAddToCart">
  <arguments>
    <argument name="conditions" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="array">
        <item name="object" xsi:type="object"
          >Vendor\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsC
        /item>
      </item>
    </argument>
  </arguments>
</virtualType>
```
- B. XML

```
<preference for="
  Magento\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsC type="
  Vendor\InventorySales\Model\ProductSalableForRequestedQtyCondition\IsSalableWithReservationsCo
  />
```
- C. XML

```
<type name="Magento\InventoryApi\Model\Stock\ValidatorChain">
  <arguments>
    <argument name="validators" xsi:type="array">
      <item name="is_salable_with_reservations" xsi:type="object"
        >Vendor\InventorySales\Model\Stock\Validator\IsSalableWithReservationsValidator</item>
      </argument>
    </arguments>
  </type>
```

Answer: A

NEW QUESTION # 46

While implementing additional functionality, a Developer needs to modify a class with protected and private methods requiring custom logic. The Developer finds that no other Magento customization, such as plugins, will work. What should the Developer do in this scenario?

- A. Use a patch to implement the necessary customizations.
- B. Use an observer to customize data processed by the class.
- C. Use a preference and extend the original class.

Answer: C

NEW QUESTION # 47

.....

People who study with questions which aren't updated remain unsuccessful in the certification test and waste their valuable resources. You can avoid this loss, by preparing with real AD0-E725 Exam Questions of Exams4sures which are real and updated.
