Learning at electronic devices does go against touching the actual study. Although our JN0-253 exam dumps have been known as one of the world's leading providers of JN0-253 exam materials. For your convenience, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Therefore, we welcome you to download to try our JN0-253 Exam. Then you will know whether it is suitable for you to use our JN0-253 test questions. We are sure to be at your service if you have any downloading problems.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.
Topic 2	<ul style="list-style-type: none">Juniper Mist Cloud Operations: This domain covers three API types (RESTful, WebSocket, Webhook) for programmatic integration, plus support resources including ticketing systems and documentation.
Topic 3	<ul style="list-style-type: none">Juniper Mist Network Operations and Management: This domain examines operational features across Wi-Fi, Wired, WAN, Routing, and Access Assurance, delivering specialized management capabilities for different network infrastructure layers.
Topic 4	<ul style="list-style-type: none">Juniper Mist Monitoring and Analytics: This domain focuses on monitoring tools including service-level expectations, packet captures, AI-driven insights, automated alerts, and audit logs for comprehensive network visibility.

ActualVCE Juniper JN0-253 Gives you the Necessary Knowledge to Pass

The JN0-253 study guide to good meet user demand, will be a little bit of knowledge to separate memory, but when you add them together will be surprised to find a day we can make use of the time is so much debris. The JN0-253 exam prep can allow users to use the time of debris anytime and anywhere to study and make more reasonable arrangements for their study and life. Choosing our JN0-253 simulating materials is a good choice for you, and follow our step, just believe in yourself, you can do it perfectly!

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q73-Q78):

NEW QUESTION # 73

A user has reported a network outage. After locating the user, you find that the switch interface facing the user is down but there is no alert in the Mist UI. You want to ensure that in the future, you receive an alert when a switch interface is down. You have already verified that the Critical Switch Port Down alarm is configured and enabled on the Alerts Configuration page.

In this scenario, which action in the Mist UI will satisfy the requirement?

- A. Disable the Critical Switch Port Down alarm on the Alerts Configuration page.
- B. Enable the Critical Switch Port Up alarm on the Alerts Configuration page.
- C. Navigate to the switch in the Mist UI and modify the Port Profile configuration to enable Persistent (Sticky) MAC Learning for the Port Profile.
- **D. Navigate to the switch in the Mist UI and modify the Port Configuration to enable the Up/Down Port Alerts setting for the interface.**

Answer: D

Explanation:

To ensure that you receive alerts when a switch interface goes down, you need to enable the Up/Down Port Alerts setting for the specific interface. This setting can be configured by navigating to the switch within the Mist UI and modifying the port configuration. Enabling this setting ensures that any changes in the port status, such as going down, will trigger an alert. This is critical for proactive network monitoring and to promptly address any connectivity issues.

NEW QUESTION # 74

Which statement is correct about the relationship between Juniper Mist organizations and sites?

- **A. One Juniper Mist organization can contain multiple sites.**
- B. One Juniper Mist site can contain multiple organizations.
- C. You must have one Juniper Mist superuser login for each site.
- D. A Juniper Mist superuser login grants access to all organizations.

Answer: A

Explanation:

According to the official Juniper Mist documentation on the configuration hierarchy, the platform uses a three- tier model: Organization # Site # Device. At the organization level, you manage administrator accounts, subscriptions, and organization-wide settings. Then:

"An organization can include one or more sites. A site can represent a physical location or a logical subdivision of your enterprise or campus." Also, in the simpler case explanation:

"Each customer is created as a separate organization. Within that organization multiple sites can be created." Mist These statements make clear that the correct relationship is: one organization may have multiple sites under it.

The inverse - that a site might contain multiple organizations - is not supported in the documented hierarchy. Therefore option B is correct.

NEW QUESTION # 75

How are Mist Alerts sent?

- A. using a text message
- **B. using e-mail**
- C. using Skype
- D. using Slack

Answer: B

NEW QUESTION # 76

Under which category would you identify bad cables using Marvis Actions?

- A. security
- **B. Layer 1**
- C. Connectivity
- D. Clients

Answer: B

Explanation:

Bad cables are identified under the Layer 1 category within Marvis Actions. Juniper Mist's documentation states: "Use the Actions dashboard to resolve Layer 1 issues. When you click the Layer 1 button on the Action dashboard, all available Layer 1 actions appear. This category currently contains only one action: bad cable." Marvis can detect and alert for bad cables based on frame errors, link statistics, and AP/Switch behavior, all under the Layer 1 category. Connectivity, security, and client issues are handled under their respective action categories, but bad cabling is specifically monitored and detected as a physical (Layer 1) fault.

Reference: Layer 1 Actions | Mist, Marvis AI Operations Guide

NEW QUESTION # 77

How does Marvis detect a bad cable problem?

- A. Marvis randomly performs cable tests on every cable in your network.
- **B. Marvis analyzes metrics, such as interface errors, that match a bad cable pattern.**
- C. Marvis constantly sends ping packets to remote end hosts to determine whether there is a failure in the path.
- D. Marvis randomly performs packet captures on various APs to find bad cables in your network.

Answer: B

Explanation:

Marvis, the AI-driven Virtual Network Assistant in Juniper Mist, uses continuous telemetry analysis and AI correlation to identify bad cable conditions. It does this by examining interface-level statistics gathered from switches and access points through Wired Assurance.

According to the Juniper Mist Marvis Operations and Troubleshooting Guide:

"Marvis detects bad cable issues by analyzing telemetry patterns such as CRC errors, FCS errors, packet drops, and link flaps that collectively match a known cable fault signature." When such patterns are detected, Marvis automatically generates an AI Action indicating a Bad Cable issue and identifies whether the problem is with the port or the cable. This proactive detection allows administrators to replace faulty hardware before it impacts network users.

Options A, B, and C are incorrect because Marvis does not perform active pinging, random packet captures, or random cable testing. Its detection is entirely AI and telemetry-based.

Therefore, the correct answer is D. Marvis analyzes metrics, such as interface errors, that match a bad cable pattern.

NEW QUESTION # 78

.....

If you still spend a lot of time studying and waiting for JN0-253 qualification examination, then you need our JN0-253 test prep, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our JN0-253 valid practice questions have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our JN0-253 Study Materials have many advantages, and you can free download the demo of our JN0-253 exam questions to have a check.
