In order to let you trust our products and let you more securely to prepare the exam, we promise, if you are still fail Sustainable-Investing Exam after using our software, after still failed, we will give you a full refund, and continue to develop better CFA Institute test software of Sustainable-Investing.

CFA Institute Sustainable Investing Certificate (CFA-SIC) Exam Sample Questions (Q299-Q304):

NEW QUESTION # 299

Asset owners can reflect ESG considerations through corporate engagement by:

- A. discussing ESG issues with an investee company's board.
- B. using ESG criteria to identify investment opportunities through a thematic approach.
- C. working with regulators to design a more stable financial system.

Answer: A

Explanation:

Asset owners can reflect ESG considerations through corporate engagement by discussing ESG issues with an investee company's board. This direct engagement allows asset owners to influence corporate behavior, encourage better ESG practices, and address specific ESG concerns that may impact long-term value creation.

This approach is integral to active ownership and stewardship strategies.

NEW QUESTION # 300

Performance materiality:

- A. Is set lower when financial controls are strong.
- B. Is usually higher than overall materiality.
- C. Can indicate the auditor's level of trust in a company's financial systems.

Answer: C

Explanation:

The Audit and Assurance section of the OTM provides clear definitions from international auditing standards. It states:

"Performance materiality represents the threshold below overall materiality that auditors use to reduce the risk that aggregate uncorrected misstatements exceed overall materiality. It also reflects the auditor's confidence in the company's control environment and financial systems." This means auditors lower performance materiality when they have less trust in internal controls and raise it when controls are robust. The concept thus indicates the degree of auditor trust in the company's systems—exactly as captured in option C.

Options A and B contradict the principle: performance materiality is always lower than overall materiality, and its adjustment direction depends on risk, not the absolute control strength.

Hence, option C is verified as correct.

NEW QUESTION # 301

Is the following statement accurate? "Engagement is meant to preserve and enhance long-term value on behalf of the asset owner by focusing on factors such as capital structure and lobbying."

- A. Yes
- B. No, because engagement does not focus on capital structure

- C. No, because engagement does not focus on lobbying

Answer: A

Explanation:

Engagement in ESG Investing:

Engagement in ESG investing is a strategy used to preserve and enhance long-term value on behalf of the asset owner. This process involves active communication and interaction with investee companies to influence their behavior and practices regarding various ESG factors.

1. Focus Areas of Engagement:

Capital Structure: Engagement can focus on capital structure, which includes discussions about debt levels, equity financing, dividend policies, and other aspects that impact a company's financial health and long-term stability.

Lobbying: Engagement may also address corporate lobbying practices, especially if these activities are perceived to be misaligned with the company's stated values or could pose reputational risks. Ensuring that lobbying efforts are transparent and aligned with sustainable business practices is part of maintaining long-term value.

2. Role of Engagement: The primary goal of engagement is to enhance the long-term value by addressing key factors that can influence the sustainability and financial performance of a company. This includes governance issues, environmental practices, and social responsibilities.

References from CFA ESG Investing:

Engagement Strategies: The CFA Institute emphasizes the role of engagement in managing and mitigating risks associated with ESG factors, which can include capital structure and lobbying activities. Engagement aims to promote transparency, accountability, and sustainable business practices that support long-term value creation.

NEW QUESTION # 302

Which of the following statements about externalities is most accurate?

- **A. Measures to internalize externalities can be taken by corporates or governments**
- B. Private costs are higher than societal costs when externalities are negative
- C. Externalities are reflected in the prices of commercial goods and services

Answer: A

Explanation:

Governments and corporations can take steps to internalize externalities, such as carbon pricing, emissions regulations, or corporate sustainability initiatives.

Externalities (A) are not always reflected in market prices.

Negative externalities mean societal costs exceed private costs, not the other way around (B).

NEW QUESTION # 303

For investments in wastewater treatment plants, a significant obstacle is:

- A. lack of demand.
- **B. high capital intensity.**
- C. availability of unskilled labor.

Answer: B

Explanation:

Wastewater treatment plants are capital-intensive projects, requiring significant investment upfront for infrastructure and technology, which can be a major barrier to entry. (ESGTextBook[PallasCatFin], Chapter 3, Page 153)

NEW QUESTION # 304
