

ADA-C01 Pdf Vce & ADA-C01 Practice Torrent & ADA-C01 Study Material

What's more, part of that ExamCost ADA-C01 dumps now are free: <https://drive.google.com/open?id=1v2CY8JckIKYOzvECZuUzu4CrdSod8w7j>

Users are buying something online (such as ADA-C01 prepare questions), always want vendors to provide a fast and convenient sourcing channel to better ensure the user's use. Because without a quick purchase process, users of our ADA-C01 quiz guide will not be able to quickly start their own review program. So, our company employs many experts to design a fast sourcing channel for our ADA-C01 Exam Prep. All users can implement fast purchase and use our learning materials. We have specialized software to optimize the user's purchase channels, if you decide to purchase our ADA-C01 prepare questions, you can achieve the product content even if the update service and efficient and convenient user experience.

It is heartening to announce that all ExamCost users will be allowed to capitalize on a free Snowflake ADA-C01 exam questions demo of all three formats of the Snowflake ADA-C01 practice test. It will make them scrutinize how our formats work and what we offer them, for example, the form and pattern of Snowflake ADA-C01 Exam Dumps, and their relevant and updated answers. It is convenient for our consumers to check ExamCost Snowflake ADA-C01 exam questions free of charge before purchasing the SnowPro Advanced Administrator practice exam.

Snowflake ADA-C01 Reliable Test Blueprint | Exam Sample ADA-C01 Online

Along with SnowPro Advanced Administrator (ADA-C01) self-evaluation exams, ADA-C01 dumps PDF is also available at ExamCost. These ADA-C01 questions can be used for quick SnowPro Advanced Administrator (ADA-C01) preparation. Our ADA-C01 dumps PDF format works on a range of Smart devices, such as laptops, tablets, and smartphones. Since ADA-C01 Questions Pdf are easily accessible, you can easily prepare for the test without time and place constraints. You can also print this format of ExamCost's SnowPro Advanced Administrator (ADA-C01) exam dumps to prepare off-screen and on the go.

Snowflake SnowPro Advanced Administrator Sample Questions (Q29-Q34):

NEW QUESTION # 29

What roles or security privileges will allow a consumer account to request and get data from the Data Exchange? (Select TWO).

- A. IMPORT PRIVILEGES and SHARED DATABASE
- B. SECURITYADMIN
- C. IMPORT SHARE and CREATE DATABASE
- D. ACCOUNTADMIN
- E. SYSADMIN

Answer: C,D

Explanation:

Explanation

According to the Accessing a Data Exchange documentation, a consumer account can request and get data from the Data Exchange using either the ACCOUNTADMIN role or a role with the IMPORT SHARE and CREATE DATABASE privileges. The ACCOUNTADMIN role is the top-level role that has all privileges on all objects in the account, including the ability to request and get data from the Data Exchange. A role with the IMPORT SHARE and CREATE DATABASE privileges can also request and get data from the Data Exchange, as these are the minimum privileges required to create a database from a share. The other options are incorrect because:

*A. The SYSADMIN role does not have the privilege to request and get data from the Data Exchange, unless it is also granted the IMPORT SHARE and CREATE DATABASE privileges. The SYSADMIN role is a pre-defined role that has all privileges on all objects in the account, except for the privileges reserved for the ACCOUNTADMIN role, such as managing users, roles, and shares.

*B. The SECURITYADMIN role does not have the privilege to request and get data from the Data Exchange, unless it is also granted the IMPORT SHARE and CREATE DATABASE privileges. The SECURITYADMIN role is a pre-defined role that has the privilege to manage security objects in the account, such as network policies, encryption keys, and security integrations, but not data objects, such as databases, schemas, and tables.

*E. The IMPORT PRIVILEGES and SHARED DATABASE are not valid privileges in Snowflake. The correct privilege names are IMPORT SHARE and CREATE DATABASE, as explained above.

NEW QUESTION # 30

A virtual warehouse report_wh is configured with AUTO_RESUME=TRUE and AUTO_SUSPEND=300. A user has been granted the role accountant.

An application with the accountant role should use this warehouse to run financial reports, and should keep track of compute credits used by the warehouse.

What minimal privileges on the warehouse should be granted to the role to meet the requirements for the application? (Select TWO).

- A. USAGE
- B. MODIFY
- C. OPERATE
- D. OWNERSHIP
- E. MONITOR

Answer: A,E

Explanation:

According to the Snowflake documentation¹, the MONITOR privilege on a warehouse grants the ability to view the warehouse usage and performance metrics, such as the number of credits consumed, the average and maximum run time, and the number of queries executed. The USAGE privilege on a warehouse grants the ability to use the warehouse to execute queries and load data. Therefore, the minimal privileges on the warehouse that should be granted to the role to meet the requirements for the application are MONITOR and USAGE. Option A is incorrect because the OPERATE privilege on a warehouse grants the ability to start, stop, resume, and suspend the warehouse, which is not required for the application. Option B is incorrect because the MODIFY privilege on a warehouse grants the ability to alter the warehouse properties, such as the size, auto-suspend, and auto-resume settings, which is not required for the application. Option E is incorrect because the OWNERSHIP privilege on a warehouse grants the ability to drop the warehouse, grant or revoke privileges on the warehouse, and transfer the ownership to another role, which is not required for the application.

NEW QUESTION # 31

A Snowflake Administrator wants to create a virtual warehouse that supports several dashboards, issuing various queries on the

same database.

For this warehouse, why should the Administrator consider setting AUTO_SUSPEND to 0 or NULL?

- A. To keep the query result cache warm for good performance on repeated queries
- **B. To keep the data cache warm to support good performance of similar queries**
- C. To save costs by running the warehouse as little as possible
- D. To save costs on warehouse shutdowns and startups for different queries

Answer: B

NEW QUESTION # 32

A data provider wants to share data from multiple databases with a data consumer account.

How can this be accomplished?

- A. The data provider needs to create a secure view and grant the USAGE privilege on each database referenced by the secure view.
- B. The data provider needs to create a secure view and grant the REFERENCE_USAGE privilege to a database role to include objects from multiple databases in a share
- **C. The data provider needs to create a secure view and grant the REFERENCE_USAGE privilege on each database referenced by the secure view.**
- D. The data provider needs to create a secure view and must grant the REFERENCE_USAGE privilege on the database where the secure view is created.

Answer: C

Explanation:

Explanation

Option B is the correct answer because it follows the steps described in the Snowflake documentation for sharing data from multiple databases using secure views. The data provider needs to grant the REFERENCE_USAGE privilege on each database that contains objects referenced by the secure view, and the USAGE privilege only on the database where the secure view is created. Option A is incorrect because it grants the USAGE privilege instead of the REFERENCE_USAGE privilege. Option C is incorrect because it grants the REFERENCE_USAGE privilege to a database role, which is not supported. Option D is incorrect because it grants the REFERENCE_USAGE privilege on the wrong database.

NEW QUESTION # 33

A Snowflake Administrator has a multi-cluster virtual warehouse and is using the Snowflake Business Critical edition. The minimum number of clusters is set to 2 and the maximum number of clusters is set to 10. This configuration works well for the standard workload, rarely exceeding 5 running clusters. However, once a month the Administrator notes that there are a few complex long-running queries that are causing increased queue time and the warehouse reaches its maximum limit at 10 clusters.

Which solutions will address the issues happening once a month? (Select TWO).

- **A. Have the group running the complex monthly queries use a separate appropriately-sized warehouse to support their workload.**
- B. Increase the multi-cluster maximum to 20 or more clusters.
- **C. Use a task to increase the cluster size for the time period that the more complex queries are running and another task to reduce the size of the cluster once the complex queries complete.**
- D. Increase the minimum number of clusters started in the multi-cluster configuration to 5.
- E. Examine the complex queries and determine if they can be made more efficient using clustering keys or materialized views.

Answer: A,C

Explanation:

According to the Snowflake documentation¹, a multi-cluster warehouse is a virtual warehouse that consists of multiple clusters of compute resources that can scale up or down automatically to handle the concurrency and performance needs of the queries submitted to the warehouse. A multi-cluster warehouse has a minimum and maximum number of clusters that can be specified by the administrator. Option A is a possible solution to address the issues happening once a month, as it allows the administrator to use a task to increase the cluster size for the time period that the more complex queries are running and another task to reduce the size of the cluster once the complex queries complete. This way, the warehouse can have more resources available to handle the complex queries without reaching the maximum limit of 10 clusters, and then return to the normal cluster size to save costs. Option B is

another possible solution to address the issues happening once a month, as it allows the administrator to have the group running the complex monthly queries use a separate appropriately-sized warehouse to support their workload. This way, the warehouse can isolate the complex queries from the standard workload and avoid queue time and resource contention. Option C is not a recommended solution to address the issues happening once a month, as it would increase the costs and complexity of managing the multi-cluster warehouse, and may not solve the underlying problem of inefficient queries. Option D is a good practice to improve the performance of the queries, but it is not a direct solution to address the issues happening once a month, as it requires analyzing and optimizing the complex queries using clustering keys or materialized views, which may not be feasible or effective in all cases. Option E is not a recommended solution to address the issues happening once a month, as it would increase the costs and waste resources by starting more clusters than needed for the standard workload.

NEW QUESTION # 34

.....

Workers and students today all strive to be qualified to keep up with dynamically changing world with ADA-C01 exam. In doing so, they often need practice materials like our ADA-C01 exam materials to conquer exam or tests in their profession. Without amateur materials to waste away your precious time, all content of ADA-C01 practice materials are written for your exam based on the real exam specially. So our ADA-C01 study guide can be your best choice.

ADA-C01 Reliable Test Blueprint: <https://www.examcost.com/ADA-C01-practice-exam.html>

Snowflake ADA-C01 Reliable Dumps These services assure you avoid any loss, If you want to know the quality of our PDF version of ADA-C01 new test questions, free PDF demo will show you, Now, the problem they face may be where to find the resource of ADA-C01 Reliable Test Blueprint - SnowPro Advanced Administrator exam test and how to confirm the validity and accuracy of ADA-C01 Reliable Test Blueprint - SnowPro Advanced Administrator exam torrent, Snowflake ADA-C01 Reliable Dumps Online practice exam will be a great partner in the exam preparation.

In the Template Properties dialog box, choose the parameter set up in the template, ADA-C01 For example, a file comparison program like diff compares the outputs from successful and failed debugging runs so you can focus on what has changed.
