Latest Test XK0-006 Simulations, XK0-006 Valid Dumps Ebook

Do you want to spend half of time and efforts to pass XK0-006 certification exam? Then you can choose VCEdumps. With efforts for years, the passing rate of XK0-006 exam training, which is implemented by the VCEdumps website worldwide, is the highest of all. With VCEdumps website you can download XK0-006 free demo and answers to know how high is the accuracy rate of XK0-006 test certification training materials, and to determine your selection.

CompTIA Linux+ Certification Exam Sample Questions (Q75-Q80):

NEW QUESTION # 75

A Linux administrator needs to create and then connect to the app-01-imagecontainer. Which of the following commands accomplishes this task?

- A. docker build -ic app-01-image
- B. docker start -td app-01-image
- C. docker run -it app-01-image
- D. docker exec -dc app-01-image

Answer: C

Explanation:

The docker run -it command both creates a new container from the specified image and attaches to it interactively, which is exactly what the administrator needs.

NEW QUESTION # 76

A Linux administrator wants to make the `ENABLE_AUTH` variable set to 1 and available to the environment of subsequently executed commands. Which of the following should the administrator use for this task?

- A. `export ENABLE_AUTH=1`
- B. `ENABLE_AUTH=1`
- C. `let ENABLE_AUTH=1`
- D. `ENABLE_AUTH=$(echo $ENABLE_AUTH)`

Answer: A

Explanation:

The `export` command sets an environment variable and makes it available to subsequently executed commands and child processes, ensuring `ENABLE_AUTH=1` is recognized system-wide in that shell session.

NEW QUESTION # 77

An administrator completes maintenance on a server but cannot remount the logical volume.

Given the following output:

Which of the following commands should the administrator execute to resolve the issue?

- A. `vgimport data`
- B. `vgchange -ay data`
- C. `lvchange -ay /dev/data/files`
- D. `lvscan --all`

Answer: B

Explanation:

The error message "special device `/dev/data/files` does not exist" suggests that the volume group data is not activated. From the `lvs` and `vgs` output:

- The logical volume `files` exists within the `data` volume group.
- The volume group (VG) and logical volume (LV) appear correctly listed, but they might be in an inactive state due to maintenance.

NEW QUESTION # 78

Users cannot access an application that is running inside containers. The administrator wants to validate whether the containers are running. Which of the following commands should the administrator use?

- A. `docker run`
- B. `docker start`
- C. `docker ps`
- D. `docker images`

Answer: C

Explanation:

The `docker ps` command lists all running containers, allowing the administrator to verify whether the application's containers are active.

NEW QUESTION # 79

A Linux administrator tries to install Ansible in a Linux environment. One of the steps is to change the owner and the group of the directory `/opt/Ansible` and its contents. Which of the following commands will accomplish this task?

- A. `chown -R Ansible:Ansible /opt/Ansible`
- B. `usermod -aG Ansible /opt/Ansible`
- C. `chmod -c /opt/Ansible`
- D. `groupmod -g Ansible -n /opt/Ansible`

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The chown command is used to change the owner and group of files and directories. The -R (recursive) flag ensures that all contents within the directory are also updated. The correct syntax is chown -R owner:group directory. So, chown -R Ansible:Ansible /opt/Ansible will change the owner and group for /opt/Ansible and everything inside it to "Ansible".

Other options:

- * A. groupmod is used to modify group properties, not ownership of directories or files.
- * C. usermod is for modifying user properties or group memberships.
- * D. chmod changes permissions, not owner/group.
