Answer: C

NEW QUESTION # 18

A server's hard drives are connected to a single controller using a component that provides power and data connections. A failure of this component could disconnect multiple drives simultaneously. Which high-speed communication board connects multiple hard drives to a single controller and whose failure can lead to drive disconnections?

- A. Backplane
- B. RAID Controller
- C. PCIe Riser Card
- D. Motherboard

Answer: D

NEW QUESTION # 19

An administrator attempts to log in to the iDRAC interface of a server using a web browser. The iDRAC prompts for a username and password. What security process is the iDRAC initiating by requesting these login credentials?

- A. Configure system lockdown mode
- B. Perform user authentication
- C. Establish user authorization levels
- D. Implement role-based access control

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extracts: The iDRAC interface prompting for a username and password initiates user authentication, verifying the identity of the user attempting access to ensure only authorized personnel can manage the server. This is a fundamental security process in PowerEdge servers to protect against unauthorized access. Lockdown mode restricts changes, role-based access control assigns permissions post-authentication, and authorization levels follow verification. Authentication is the primary step here. Exact extract: "Describe the security features in PowerEdge servers... Explain the role of TPM and Secure Boot."
