We consider the actual situation of the test-takers and provide them with high-quality learning materials at a reasonable price. Choose the Mule-101 test guide absolutely excellent quality and reasonable price, because the more times the user buys the Mule-101 test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the Mule-101 learning questions, our staff will help solve them as soon as possible.

Once the user has used our Mule-101 test prep for a mock exercise, the product's system automatically remembers and analyzes all the user's actual operations. The user must complete the test within the time specified by the simulation system, and there is a timer on the right side of the screen, as long as the user begins the practice of Mule-101 quiz guide, the timer will run automatic and start counting. If the user does not complete the mock test question in a specified time, the practice of all Mule-101 valid practice questions previously done by the user will automatically uploaded to our database. The system will then generate a report based on the user's completion results, and a report can clearly understand what the user is good at. Finally, the transfer can be based on the Mule-101 Valid Practice Questions report to develop a learning plan that meets your requirements. With constant practice, users will find that feedback reports are getting better, because users spend enough time on our Mule-101 test prep.

Mule-101 Reliable Study Questions - New Mule-101 Test Blueprint

Success does not come only from the future, but it continues to accumulate from the moment you decide to do it. At the moment you choose Mule-101 practice quiz, you have already taken the first step to success. The next thing you have to do is stick with it. Mule-101 Training Materials will definitely live up to your expectations. Not only our Mule-101 study materials contain the latest exam questions and answers, but also the pass rate is high as 98% to 100%.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q51-Q56):

NEW QUESTION # 51

An integration team follows MuleSoft's recommended approach to full lifecycle API development. 9

- A. Use the API specification to build the MuleSoft application
- B. Design the API specification
- C. Use the API specification to monitor the MuleSoft application
- D. Validate the API specification

Answer: A

Explanation:

(Note: The question implies "What is the next step after design/validation?" or "How is the spec used?". Based on the answer key A, the context is how the spec drives development).

Comprehensive and Detailed Explanation:

API-Led Connectivity & Design-First: MuleSoft promotes a "Design-First" approach. You first write the RAML or OAS specification.

MuleSoft scaffolding: Once the specification is designed and published to Exchange, the developer imports it into Anypoint Studio. Studio then scaffolds (automatically generates) the Mule flows based on the API Specification.

The Workflow:

Design: Create the API contract (RAML/OAS).

Publish: Publish to Exchange.

Build (Answer A): Use the API specification to generate the flow structure (APIkit Router) and implement the logic.

This ensures the implementation strictly matches the design defined in the earlier phases.

NEW QUESTION # 52

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

- A. Publishing the fully implemented API to Exchange so all developers can reuse the API
- B. Developing a specification so consumers can test before the implementation is built
- C. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- D. Adding global policies to the API so all developers automatically secure the implementation before coding anything

Answer: B

Explanation:

Design-First Approach: This methodology prioritizes creating the API contract (RAML/OAS) before writing any code¹⁹.

The Benefit: By defining the specification first and publishing it to Exchange (often with a Mocking Service), API consumers (frontend developers or other teams) can test and provide feedback on the design immediately.²⁰ This ensures the API meets business needs before the expensive work of backend implementation begins, preventing the failure described in the scenario^{21,22,23} Why others are incorrect:

Publishing fully implemented API (C): This is a "Code-First" approach (build first, share later).

Global Policies (B): Relates to governance, not the design methodology.

NEW QUESTION # 53

According to MuleSoft's API development best practices, which type of API development approach starts with writing and approving an API contract?

- A. Agile
- **B. Design-first**
- C. Implement-first
- D. Catalyst

Answer: B

Explanation:

Design-First: This approach dictates that the API Contract (the Specification, e.g., RAML/OAS) must be written, reviewed, and approved before any implementation code is written.

The Contract: The "Contract" serves as the agreement between the API provider and the consumer.

Why others are incorrect:

Implement-first: You write the code (Mule flows) first, and the contract is generated from the code (or ignored).

Catalyst: Is a broader delivery methodology, not specifically the "Contract-first" technical approach.

NEW QUESTION # 54

Which Anypoint Platform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. Runtime Manager
- B. MDint (Likely typo in PDF, refers to MUnit or similar tools)
- C. API Manager
- **D. API Designer**

Answer: D

Explanation:

Design-First Approach: The lifecycle starts with Design.

API Designer: This is the web-based tool within Design Center where developers write the API contract using RAML (RESTful API Modeling Language) or OAS (OpenAPI Specification). 9 Functionality: It provides syntax highlighting, error checking, and a "Mocking Service" that allows you to test the API's behavior before writing any actual code.

Why others are incorrect:

API Manager: Used after design to manage policies and gateways.

Runtime Manager: Used after build to deploy the application.

NEW QUESTION # 55

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. Connectors
- B. API Spec Fragments
- C. SOAP APIs
- **D. REST APIs**

Answer: D

Explanation:

REST APIs (Asset Type): In Anypoint Exchange and Design Center, when you create a new project to define a full API specification (using RAML or OAS), the resulting asset type is categorized as a "REST API." API Spec Fragments: These are parts of a specification (like a specific Data Type, Trait, or Security Scheme) designed to be reused across multiple different API specs.

They are not "complete" APIs on their own.

SOAP APIs: Use WSDL (XML), not RAML/OAS.
