## Appian Certified Analyst Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Users expressed that only managers should be able to see information related to a business object. How should you translate this requirement into a user story?

- A. "As a manager, I need to build security options for records."
- B. "Only some of the data are available for managers."
- C. "As a manager, I need to be able to see a record type and navigate the details."
- D. "As a manager, I must be in the group to see the data."

**Answer: C**

Explanation:

The correct way to translate the requirement into a user story is to focus on the manager's ability to access and navigate the information related to the business object. This user story follows the standard format: "As a [role], I need to [action] so that [benefit]." In this case, the story captures the manager's need to view and interact with specific data.

User Story Format:

Role: Manager

Action: Ability to see and navigate a record type

Benefit: Ensures managers have the necessary access to perform their job duties Why Not Other Options?:

B . Focuses on building security options rather than the manager's need to access data.

C . Is vague and does not follow the standard user story format.

D . Focuses on group membership but is less specific about the action the manager needs to perform.

Using the correct user story format ensures that the development team clearly understands the requirement and how it benefits the end user.

### NEW QUESTION # 47

Which Appian gateway node can only trigger a single outgoing path?

- A. XOR
- B. COMPLEX
- C. AND
- D. OR

**Answer: A**

Explanation:

The XOR (Exclusive OR) gateway in Appian can only trigger a single outgoing path based on the evaluation of conditions. It allows for one path to be taken out of multiple possible paths, depending on which condition is met first. This makes it suitable for scenarios where only one outcome can occur based on a set of criteria. Appian Documentation - BPMN Gateways Note: The other gateways (OR, COMPLEX, AND) can trigger multiple outgoing paths, making XOR the correct choice when only one path is to be followed.

### NEW QUESTION # 48

You need to show a set of data related to a single business object and be able to navigate into the details. Which three features will help you accomplish your goals?

- A. Record
- B. Database
- C. Page
- D. Report
- E. Sites

**Answer: A,C,D**

Explanation:

To display a set of data related to a single business object and allow navigation into details, the combination of Report, Record, and

Page features in Appian is the most effective approach.

Reports:

Reports allow you to aggregate and visualize data, providing an overview of the business object.

They can include interactive elements that enable users to drill down into specific details.

Records:

Records in Appian represent business objects and provide a centralized view of all related data.

Users can navigate through the data to see different aspects of the business object, including related records and details.

Pages:

Pages in Appian are used to create user interfaces that combine multiple elements, such as Reports and Records, into a cohesive experience.

Pages allow you to organize and present the data in a way that supports user navigation and interaction.

Why Not Other Options?:

A . Sites: Sites are used to create customized user interfaces but do not directly handle data presentation and navigation.

D . Database: The database is where data is stored, but it is not directly used to display or navigate data within the user interface.

These features together provide a powerful and flexible way to display and interact with business data in Appian.

### NEW QUESTION # 49

Review the following project phase definition:

"A standardized agreement between Development Team and the Product Owner on what criteria a user story must meet in order for the team to consider it complete." Which option does this definition apply to?

- A. Definition of Done (DoD)
- B. Acceptance Criteria
- C. Definition of Ready (DoR)
- D. Value Statement

**Answer: A**

Explanation:

The "Definition of Done" (DoD) refers to a shared understanding between the Development Team and the Product Owner on the criteria that a user story must meet to be considered complete. This definition helps ensure that all aspects of the user story are fully developed, tested, and meet the agreed-upon standards before being marked as done.

Definition of Done Overview:

DoD includes all conditions that must be satisfied for the work to be accepted by the product owner.

It typically covers code completion, testing, documentation, and any other activities required to deliver a finished product.

Why Not Other Options?:

A . Acceptance Criteria: Defines specific requirements that a user story must meet, but does not encapsulate the broader checklist for completion.

B . Value Statement: Describes the value delivered by a feature, not the criteria for completion.

C . Definition of Ready (DoR): Refers to when a user story is ready to be taken into a sprint, not when it is complete.

The Definition of Done ensures that the product increment is fully functional, tested, and ready for deployment, maintaining a high standard of quality.

### NEW QUESTION # 50

You are part of a project team building an application for organizing and automating an approval process for purchase orders.

Each purchase order requires approvals from multiple users within the application, and these approvals are sequential (for example, User B receives an approval task after the completion of User A's approval task). Your team is responsible for showing the approval step of each purchase order on its purchase order record.

Which Appian interface component should you use to best display the completed, current, and future approval steps for each purchase order?

- A. Progress Bar Component
- B. Org Chart Component

- C. Milestone Component
- D. Gauge Component

**Answer: C**

Explanation:

The Milestone Component in Appian is the best choice for displaying the completed, current, and future approval steps of each purchase order. This component visually represents the progression of a process with distinct milestones, making it ideal for sequential tasks like approvals. Each milestone can indicate whether the step is completed, active, or pending, providing a clear and intuitive view of the approval process for users. Appian Documentation - Milestone Component Note: The Progress Bar Component (A) is more suited for linear progress representation rather than distinct stages. The Gauge Component (B) and Org Chart Component (D) are not appropriate for this type of sequential task display.
