Our company boosts an entire sale system which provides the links to the clients all around the world so that the clients can receive our products timely.

## HPE Aruba Networking Switching Professional Exam Sample Questions (Q61-Q66):

### NEW QUESTION # 61

Refer to the exhibit:

Based on the output, which statement is true?

- A. The switch requires a commit configuration, once the change is pushed.
- **B. The switch has a configuration pushed that has changed the default settings.**
- C. The switch is set to auto checkpoint creation for auto-rollback, if configuration push fails.
- D. The switch is currently managed by local CLI overrides.

**Answer: B**

Explanation:

This exhibit displays the Configuration Status dashboard within HPE Aruba Networking Central for a specific switch (SW0).

\* Interpreting "Local Overrides " : In the Central management model, switches are typically assigned to a Group , and they inherit the configuration of that group (the " inherited settings "). A Local Override (as explicitly defined in the exhibit ' s header text) occurs when an administrator makes a configuration change at the individual device level within Central. This device-specific configuration takes precedence over the group-level settings.

\* Analysis of SW0:

\* The table shows Local Overrides: Yes . This confirms that SW0 has unique configuration parameters applied to it that differ from the baseline configuration of its assigned group.

\* The Config Status is Synchronized , meaning these device-level changes have already been successfully pushed to the switch.

\* Evaluating the Options:

\* Option B (Correct): Having a " Local Override " means that a configuration has been pushed to the switch which deviates from the " default " (inherited group) settings.

\* Option A: " Local Overrides " in Central refers to the Central UI device-level settings , not changes made directly on the local physical CLI of the switch.

\* Option C: While Central does track configuration health, this specific screen is showing override and commit status, not the detailed logic for auto-checkpoints.

\* Option D: The exhibit shows Auto-commit Changes State: ON . This means any change made in Central is automatically committed and pushed to the device; no manual commit action is required by the administrator.

### NEW QUESTION # 62

In AOS-CX switching, what determines when a frame is forwarded by the switch between the ingress and the egress port?

- A. Fabric Load Balancer
- **B. Ingress port**
- C. Egress port
- D. VSX switch tables

**Answer: B**

### NEW QUESTION # 63

A multicast configuration on an HPE Aruba Networking CX 6300 VSF is used for a group address 239.0.0.1. The configuration is having issues, and the video streaming clients are not receiving the stream. What would be a possible root cause for the problems experienced?

- A. The IGMP is enabled on the VLANs without any multicast traffic.
- B. The IGMP-snooping is using version 2 configured for the SVI.
- **C. The selected multicast address will overlay with Link-Local Multicast address scope.**
- D. The selected multicast address will overlay with PIM-SM discovery address.

**Answer: C**

### NEW QUESTION # 64

Which CLI command configures a trust boundary for incoming traffic based on DSCP values?

- A. apply trust-dscp
- B. qos enforce dscp
- C. qos trust dscp
- D. traffic trust dscp

**Answer: C**

Explanation:

The qos trust dscp command ensures DSCP-marked traffic is honored without modification, allowing end-to-end traffic prioritization in a QoS-enabled network.

### NEW QUESTION # 65

For the aggregation layer, you must configure two new HPE Aruba Networking CX 6200M (VSF) switches. LACP link aggregations to downstream access switches using redundant ports from both switches are required.

Which configuration example would create the required lag setup on both switches utilizing HPE Aruba Networking clustering or stacking technologies?

- A.
- B.
- C.
- D.

**Answer: C**

Explanation:

In a VSF stack, member ports from multiple switches are aggregated using a standard LAG, not a multi-chassis LAG (that is for VSX). The correct configuration therefore uses a single lag 1 with LACP active and adds both 1/1/1 and 2/1/1 as members.

### NEW QUESTION # 66

.....

Different person has different goals, but our Exam4Docs aims to help you successfully pass HPE7-A08 exam. Maybe to pass HPE7-A08 exam is the first step for you to have a better career in IT industry, but for our Exam4Docs, it is the entire meaning for us to develop HPE7-A08 exam software.
