

1Z0-1124-24 Exam Quizzes - 1Z0-1124-24 Exam Tutorials

P.S. Free & New 1Z0-1124-24 dumps are available on Google Drive shared by PDFDumps: https://drive.google.com/open?id=1G749Hzc87Ux7Oszb_jlo3BIQYcBSZCX6

PDFDumps provides a web-based Oracle Practice Test that includes all of the desktop software's functionality. The only difference is that this Oracle Cloud Infrastructure 2024 Networking Professional online practice test is compatible with Linux, Mac, Android, IOS, and Windows. To take this 1Z0-1124-24 mock test, you do not need to install any Oracle 1Z0-1124-24 Exam Simulator software or plugins. All browsers, including Internet Explorer, Firefox, Safari, Google Chrome, Opera, and Microsoft Edge, are supported by the web-based 1Z0-1124-24 practice test. With this format, you can simulate the Oracle 1Z0-1124-24 real-world exam environment.

Maybe you doubt the ability of our Oracle test dump; you can download the trial of our practice questions. All 1Z0-1124-24 exam prep created by our experienced IT workers who are specialized in the certification study guide. We checked the updating of 1Z0-1124-24 vce braindumps to make sure the preparation successful.

1Z0-1124-24 Exam Tutorials, Exam 1Z0-1124-24 Syllabus

All 1Z0-1124-24 online tests begin somewhere, and that is what the 1Z0-1124-24 training course will do for you: create a foundation to build on. Study guides are essentially a detailed 1Z0-1124-24 tutorial and are great introductions to new 1Z0-1124-24 training courses as you advance. The content is always relevant, and compound again to make you pass your 1Z0-1124-24 Exams on the first attempt. You will frequently find these 1Z0-1124-24 PDF files downloadable and can then archive or print them for extra reading or studying on-the-go.

Oracle Cloud Infrastructure 2024 Networking Professional Sample Questions (Q44-Q49):

NEW QUESTION # 44

What is the primary function of dedicated endpoints in OCI?

- A. To provide secure, tenancy-specific access to resources.
- B. To provide a shared endpoint for all OCI customers.
- C. To increase data transfer speeds.
- D. None of the above.

Answer: A

Explanation:

The primary function of dedicated endpoints in OCI is to provide secure, tenancy-specific access to resources.

Here, why the other options are not correct:

A). To provide a shared endpoint for all OCI customers: This is incorrect. Dedicated endpoints are unique to each individual tenant, offering isolation and enhanced security. C. To increase data transfer speeds: While dedicated endpoints might indirectly improve

performance due to potential security optimizations, their primary function is not focused on raw speed increases. D. None of the above: As explained earlier, dedicated endpoints are crucial for secure access within OCI. By offering unique and immutable endpoints for each tenant, dedicated endpoints significantly enhance security by:

- Preventing accidental or malicious access: Each tenant's resources are isolated, minimizing the impact of security incidents.
- Reducing the attack surface: By eliminating shared endpoints, attackers have fewer potential targets to exploit.
- Supporting stricter security policies: Organizations with stringent security requirements can leverage dedicated endpoints to meet their compliance needs.

NEW QUESTION # 45

Which of the following statements about route advertisement across DRGs is TRUE?

- A. Route advertisement across DRGs is not possible, and each DRG must have its own set of static routes.
- B. DRGs automatically learn and advertise routes from attached VCNs, eliminating the need for route tables in VCNs.
- **C. You can configure filters to control which routes are advertised across DRGs, based on prefixes or other criteria.**
- D. All routes learned from a DRG are automatically advertised to all other attached DRGs.

Answer: C

Explanation:

A). All routes learned from a DRG are automatically advertised to all other attached DRGs: This is false. Route advertisement across DRGs is controlled and requires configuration using route filters. Advertising all routes without filtering can lead to routing loops and unintended traffic flow. C. DRGs automatically learn and advertise routes from attached VCNs, eliminating the need for route tables in VCNs: This is partly true. DRGs do import routes from attached VCNs by default, but route tables are still essential in VCNs to manage internal routing within the VCN and control what specific routes get exported to the DRG for further advertisement. D. Route advertisement across DRGs is not possible, and each DRG must have its own set of static routes: This is false. Route advertisement across DRGs is a core functionality, allowing for efficient routing between VCNs across different regions or connected networks. Static routes can be used within DRGs, but relying solely on them can be inflexible and impractical for larger-scale or dynamic network environments.

NEW QUESTION # 46

You need to assign a static public IP address to a specific instance. What service do you use?

- A. Internet Gateway
- B. NAT Gateway
- **C. Public IP Pool**
- D. Service Gateway

Answer: C

Explanation:

Internet Gateway: This service allows communication between your VCN and the internet, but it doesn't assign IP addresses to instances.

Service Gateway: This facilitates private access to Oracle services, not individual instance public IP assignment.

NAT Gateway: This translates private IP addresses of instances to a single public IP address, not providing dedicated IPs for specific instances.

Public IP Pool: This service holds a pool of reserved public IP addresses. You can create a reserved public IP from this pool and attach it to a specific VNIC associated with your instance, effectively assigning it a static public IP address.

NEW QUESTION # 47

To establish dynamic routing between an on-premises network and an OCI VCN using BGP. Which OCI resource is required?

- A. Internet Gateway
- **B. Dynamic Routing Gateway (DRG)**
- C. Virtual Router
- D. Service Gateway

Answer: B

Explanation:

BGP Support: DRGs support Border Gateway Protocol (BGP) for dynamic routing exchange between attached networks. This allows for automatic path selection and traffic redirection based on network conditions, improving efficiency and scalability.

Centralized Management: DRGs act as centralized hubs, enabling you to manage BGP routing for multiple VCNs and on-premises connections from a single location.

Security: DRGs support private peering, ensuring secure communication between your on-premises network and VCNs without traversing the public internet.

Flexibility: DRGs offer various peering options, including local peering for intra-region connections and remote peering for cross-region connections.

Comparison with other options:

Service Gateway (A): Primarily for managing outbound internet traffic within a VCN, doesn't support BGP or on-premises connections.

Internet Gateway (B): Provides public internet access within a VCN, not intended for secure, dynamic routing with an on-premises network.

Virtual Router (D): While virtual routers can perform routing within a VCN, they don't support BGP peering with external networks like your on-premises environment.

NEW QUESTION # 48

IF experiencing BGP peering issues with on-premises network. Which tools can help in diagnoses ?

- A. VCN flow logs
- B. Service Gateway logs
- C. DRG route table entries
- **D. BGP peering debug logs**

Answer: D

Explanation:

Direct Insights: BGP peering debug logs provide detailed information about the BGP peering session between your DRG and the on-premises router. This includes events like neighbor establishment, route advertisements, updates, and errors. Analyzing these logs will reveal the specific point of failure or misconfiguration causing the issue.

Standardized Format: BGP debug logs follow a standardized format, making them easier to interpret and troubleshoot compared to other log types.

Targeted Information: Unlike other options, BGP peering debug logs focus specifically on the BGP communication with the on-premises network, minimizing noise and irrelevant information.

Comparison with other options:

Service Gateway logs (A): While Service Gateway logs might provide general network information, they won't contain specific details about BGP peering with the on-premises network.

VCN flow logs (B): VCN flow logs track traffic flow within VCNs, not BGP communication with external networks.

DRG route table entries (C): While DRG route table entries offer insights into routing, they don't reveal details about the BGP peering session itself.

NEW QUESTION # 49

.....

We can claim that prepared with our 1Z0-1124-24 study materials for 20 to 30 hours, you can easy pass the 1Z0-1124-24 exam and get your expected score. Also we offer free demos of our 1Z0-1124-24 exam questions for you to check out the validity and precise of our 1Z0-1124-24 Training Materials. Just come and have a try! You will be surprised to find the high accuracy of our 1Z0-1124-24 training material. And as our high pass rate of 1Z0-1124-24 practice braindump is 99% to 100%, you will pass the exam easily.
