Latest C_TS422_2023 Exam Cost & C_TS422_2023 Latest Exam Online

The ExamDumpsVCE is committed to offering updated and verified C_TS422_2023 exam practice questions all the time. To achieve this objective the ExamDumpsVCE has hired a team of experienced and qualified C_TS422_2023 Exam experts. They work together and put all their expertise to update and verify SAP C_TS422_2023 exam questions.

The SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing C_TS422_2023 Questions lead to SAP C_TS422_2023 certification. The C_TS422_2023 certification is for anyone new to the industry. Whether you have just graduated from college, making a career change, already working in the sector, or searching for new ways to progress, the SAP C_TS422_2023 Certification is ideal for you. If you want to appear in the C_TS422_2023 test of SAP C_TS422_2023 certification, you should have basic hands-on experience.

Latest C_TS422_2023 Exam Cost - High-quality SAP SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing - C_TS422_2023 Latest Exam Online

This kind of prep method is effective when preparing for the SAP C_TS422_2023 certification exam since the cert demands polished skills and an inside-out understanding of the syllabus. These skills can be achieved when you go through intensive SAP C_TS422_2023 Exam Training and attempt actual SAP C_TS422_2023.

SAP C_TS422_2023 Exam Syllabus Topics:

Topic	Details

Topic 1	• Master Data in SAP S • 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
Topic 2	• Material Requirements Planning in SAP S • 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
Topic 3	• Introduction to SAP S • 4HANA Supply Chain Planning: This part covers the background and motivation for SAP S • 4HANA, its main components, business applications, and user experience strategy.
Topic 4	• Demand Management in SAP S • 4HANA: This section covers a comparison of production methods in various manufacturing environments.
Topic 5	• Lean Manufacturing in SAP S • 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.
Topic 6	• Process Orders in SAP S • 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
Topic 7	• Capacity Planning in SAP S • 4HANA: This section covers a discussion of SAP S • 4HANA best practices, SAP HANA database concept, SAP Fiori user experience, and embedded analytics capabilities.
Topic 8	• Advanced Planning in SAP S • 4HANA: This section includes an overview of advanced planning fundamentals and master data. Explanation of key tools and processes. Discussion of planning evaluation concepts.
Topic 9	• Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q73-Q78):

NEW QUESTION # 73
During production order creation, several valid production versions are found. How does the system choose the production version?

- A. Alphanumeric or quota arrangement
- B. Validity period or sales order
- C. Lot size or material cost
- D. Planned order or material number

Answer: B

Explanation:
The system chooses the production version based on the validity period and the sales order. The validity period determines whether the production version is valid for the planned start date of the production order. The sales order determines whether the production version is assigned to a specific sales order item or not. If there are multiple production versions that meet these criteria, the system chooses the one with the lowest alphanumeric value. Reference: [SAP S/4HANA Production Planning and Manufacturing Certification Guide], page 113; [SAP Help Portal: Production Version]

NEW QUESTION # 74

Which of the following processes lead to an entry in the MRP planning file? Note: There are 2 correct answers to this question.

- A. Changing the stock in inventory management
- B. Changing the procurement type in the product master
- C. Changing the storage bin in warehouse management
- D. Changing the delivery address in transportation management

Answer: A,B

NEW QUESTION # 75
Your production planners must execute planning only for specific resources. How can you achieve this in Advanced Planning (PP/DS)?

- A. Use a propagation range.
- B. Use a resource group
- C. Use a planning area.
- D. Use a planning group.

Answer: B

Explanation:
You can achieve planning only for specific resources in Advanced Planning (PP/DS) by using a resource group. A resource group is a collection of resources that share the same characteristics and can be used interchangeably for production. You can assign a resource group to a product or a production version, and then use the resource group as a selection criterion in the planning board or the product view. This way, you can restrict the planning to only those resources that belong to the resource group. Reference: SAP S/4HANA Manufacturing for Planning & Scheduling - Implementation Guide, page 25; [SAP S/4HANA Production Planning and Manufacturing Certification Guide], page 79.

NEW QUESTION # 76
Why would you use phantom assemblies? Note: There are 3 correct answers to this question.

- A. To make the assignment of components easier
- B. To reduce the number of material masters
- C. To simplify the structure of bills of material
- D. To increase the number of planning levels
- E. To reduce the number of changes required in bills of material

Answer: A,C,E

Explanation:
Phantom assemblies in SAP S/4HANA (special procurement type 50, material master MRP 2 viewor BOM item) are virtual components not physically stocked-their BOM is exploded directly into the higher-level assembly. Benefits include:
* To simplify the structure of bills of material(A): By treating a group of components as a phantom (e.g., a kit), the BOM avoids an extra level of assembly, reducing complexity in planning and documentation (e.g., one BOM level instead of two).
* To reduce the number of changes required in bills of material(B): Changes to a phantom's components (CS02) automatically propagate to all higher-level BOMs using it, minimizing maintenance effort compared to updating separate subassembly BOMs.
* To make the assignment of components easier(D): In production orders (CO01), phantom components are directly assigned to the parent operation, simplifying goods issue and confirmation by eliminating subassembly steps.
To reduce the number of material masters(C) is incorrect-phantoms still require a material master with type (e.g., HALB) and procurement key 50, so the count remains unchanged.To increase the number of planning levels(E) is false-phantoms reduce planning levels by bypassing subassembly production. This is per SAP's phantom assembly usage.

NEW QUESTION # 77
What does forecasting in the demand planning cycle include?
Note: There are 3 correct answers to this question

- A. Past sales order quantities
- B. One-off events

- C. Past quotation quantities
- D. Past production planning quantities
- E. Market intelligence

Answer: A,B,E

Explanation:
One-off events: These are special events that affect the demand for a product, such as promotions, holidays, or product launches. You can use the one-off events function in SAP S/4HANA to create and maintain events and assign them to products. The system considers the events when generating the forecast and adjusts the demand accordingly.
Past sales order quantities: These are the historical data of the actual sales orders for a product. You can use the past sales order quantities as the basis for forecasting the future demand. The system applies statistical methods and algorithms to analyze the past sales order quantities and identify the trends, patterns, and seasonality of the demand.
Market intelligence: This is the external information that influences the demand for a product, such as market research, competitor analysis, or customer feedback. You can use the market intelligence function in SAP S/4HANA to import and integrate market data from various sources into the forecast. The system adjusts the demand based on the market intelligence data and the weighting factors that you define. Reference: Exploring the Steps of Supply Chain Planning; SAP S/4HANA Production Planning and Manufacturing II, Unit 2: Demand Management; [SAP S/4HANA Production Planning and Manufacturing Certification Guide], page 76.

NEW QUESTION # 78

......

Quality of C_TS422_2023 practice materials you purchased is of prior importance for consumers. Our C_TS422_2023 practice materials make it easier to prepare exam with a variety of high quality functions. Their quality function is observably clear once you download them. We have three kinds of C_TS422_2023 practice materials moderately priced for your reference. All these three types of C_TS422_2023 practice materials win great support around the world and all popular according to their availability of goods, prices and other term you can think of.
