C_BCBTP_2502 Reliable Test Objectives, Well C_BCBTP_2502 Prep

Exam Code: C_BCBTP_2502
Total No. of Questions: 30
Passing Percentage: 70
Exam Duration: 60 Min

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 1

Which of the following can you do with SAP Datasphere? Note: There are 2 correct answers to this question.

- A. Create and consume in-memory caches
- B. Manage user accounts and authorizations
- C. Integrate data from different sources
- D. Provide a unified data and analytics platform

Answer C D

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 2

What are the main types of APIs commonly used in SAP BTP? Note: There are 2 correct answers to this question.

- A. SOAP APIS
- B. REST APIS
- C. FTP APIS
- D. RPC APIs

Answer A B

Positioning SAP Business Technology Platform as part of SAP Business Suite

Question 3

What are some of the SAP BTP commercial models? Note: There are 2 correct answers to this question.

- A. Modular Pricing
- B. Pay-As-You-Go
- C. Subscription
- D. Named User License

Answer B C

Our test engine has been introduced for the preparation of C_BCBTP_2502 practice test and bring great convenience for most IT workers. It will make you feel the atmosphere of the C_BCBTP_2502 actual test and remark the mistakes when you practice the exam questions. We strongly recommend that you should prepare your C_BCBTP_2502 Exam PDF with our test engine before taking real exam.

SAP C_BCBTP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
Topic 2	• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

SAP C_BCBTP_2502 Reliable Test Objectives Exam Pass Once Try | Well C_BCBTP_2502 Prep

Undoubtedly, passing the SAP C_BCBTP_2502 certification exam is one big achievement. Regardless of how tough the C_BCBTP_2502 exam is, it serves an important purpose of improving your skills and knowledge of a specific field. Once you become certified by SAP C_BCBTP_2502, a whole new career scope will open up to you.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q30-Q35):

NEW QUESTION # 30
Which SAP BTP component provides a centralized hub for managing enterprise APIs?

- A. SAP Ariba
- B. SAP Business Network
- C. SAP SuccessFactors
- D. SAP API Management

Answer: D

Explanation:
As businesses move toward a "composable" architecture, APIs (Application Programming Interfaces) become the essential links between different software components. SAP API Management, a core capability of the SAP Integration Suite on BTP, provides a centralized hub to design, publish, secure, and monitor these APIs.
In a complex SAP Business Suite environment, APIs might be exposed from S/4HANA, SuccessFactors, or even third-party non-SAP systems. Without a centralized management tool, these connections become difficult to track, secure, and update.
SAP API Management allows IT administrators to enforce consistent security policies (such as OAuth or rate- limiting) across all enterprise services, protecting sensitive data from unauthorized access. It also includes a
"Developer Portal," which serves as a self-service catalog where developers can discover and test available APIs, significantly speeding up the development of new applications and integrations. By positioning API Management as a central pillar, SAP BTP enables "API-first" development, which is critical for digital transformation. This ensures that the enterprise is open and connectable, allowing for seamless communication between the digital core and the vast ecosystem of cloud services, mobile apps, and IoT devices.

NEW QUESTION # 31
How does SAP BTP enable businesses to extend their existing SAP applications?

- A. By restricting integration with external systems.
- B. By requiring all applications to be developed from scratch.
- C. By limiting customization to SAP standard functionalities.
- D. By providing low-code/no-code development tools.

Answer: D

Explanation:
A fundamental principle of modernizing the SAP ecosystem is the concept of a "Clean Core." SAP BTP enables this by allowing organizations to build extensions "side-by-side" rather than within the core ERP code (classic "in-app" customization). By providing low-code/no-code development tools, such as SAP Build, the platform empowers both professional developers and "citizen developers" (business users with limited coding knowledge) to create applications that add specific business value without compromising the stability or upgradeability of the core SAP S/4HANA system.
These tools allow for the rapid creation of user interfaces using SAP Fiori elements and the automation of manual tasks through visual drag-and-drop interfaces. This approach is a stark contrast to traditional development, which often required extensive, custom ABAP coding that made system upgrades difficult and expensive. By positioning BTP as the extension layer, SAP ensures that businesses can remain agile and respond quickly to market changes. This flexibility is supported by a robust set of services that

facilitate secure communication between the extension and the core system via APIs. Consequently, businesses can innovate at the edge while maintaining a stable, standardized digital core, which is the hallmark of the SAP Business Suite's evolution into the cloud era.

NEW QUESTION # 32
Which SAP BTP capability is crucial for supply chain resilience in the logistics industry?

- A. Real-time data exchange and tracking with SAP Integration Suite.
- B. Manual coordination of supply chain operations.
- C. Limiting automation in fleet management.
- D. Restricting logistics data visibility to local servers.

Answer: A

Explanation:
Supply chain resilience depends on visibility and the ability to react to disruptions in real-time. The SAP Integration Suite on BTP is crucial here because it enables real-time data exchange and tracking across a global network of suppliers, carriers, and warehouses. In the logistics industry, delays at a single port or a shortage of specific raw materials can have a cascading effect. By integrating IoT (Internet of Things) sensors, GPS tracking, and carrier management systems through the BTP Integration Suite, companies can gain a
"control tower" view of their entire supply chain.
This connectivity allows for "event-driven" logistics. For example, if a shipment is delayed, the system can automatically trigger a notification in the SAP S/4HANA system, recalculate production schedules, and notify customers-all without manual intervention. This level of automation and visibility is what builds resilience; it allows businesses to pivot quickly when faced with unexpected challenges. Positioning SAP BTP as the integration hub for logistics ensures that data flows smoothly between the "digital core" and the physical world of shipping and receiving. This transforms the supply chain from a linear, often opaque process into a dynamic, responsive network that can withstand the pressures of modern global commerce.

NEW QUESTION # 33
How does SAP BTP support hybrid cloud strategies?

- A. By restricting enterprises to a single cloud vendor.
- B. By enforcing cloud-only solutions without on-premise support.
- C. By eliminating the need for cloud-based analytics.
- D. By allowing seamless integration between on-premise and cloud systems.

Answer: D

Explanation:
Most large enterprises do not operate solely in the cloud; they maintain a "hybrid" environment consisting of legacy on-premise systems (like SAP ERP 6.0) and modern cloud applications (like SAP S/4HANA Cloud).
SAP BTP supports hybrid cloud strategies by acting as the bridge between these two worlds. Through the SAP Connectivity Service and the Cloud Connector, BTP establishes a secure, encrypted tunnel that allows cloud-based services to access on-premise data and processes without requiring complex VPN setups or opening vulnerable firewall ports.
This capability is essential for businesses that are mid-transition in their digital transformation journey. It allows them to keep their core "system of record" on-premise for compliance or technical reasons while still taking advantage of cloud-native innovations on BTP, such as advanced analytics, AI, and mobile extensions.
By positioning BTP as a hybrid-ready platform, SAP ensures that customers can modernize at their own pace.
This "side-by-side" extensibility model ensures that the on-premise core remains clean and stable, while the cloud layer provides the agility needed to respond to market changes. This flexibility is a cornerstone of the SAP Business Suite's value proposition, offering a path to the cloud that respects the existing investments of the enterprise.

NEW QUESTION # 34
How does SAP BTP support predictive analytics in business decision-making?
Note: There are 3 correct answers to this question.

- A. By restricting analytics to financial data.

- B. By using SAP Data Intelligence for real-time insights.
- C. By leveraging AI and machine learning models.
- D. By automating data visualization.
- E. By requiring only manual data input.

Answer: B,C,D

Explanation:

SAP BTP provides a comprehensive ecosystem for predictive analytics, moving business decision-making from a reactive to a proactive state. This is achieved through three primary mechanisms. First, by leveraging AI and machine learning models (Option A), BTP services like SAP AI Core allow developers to train models on historical business data to predict future trends, such as customer churn or equipment failure.

Second, the platform automates data visualization (Option B) through SAP Analytics Cloud. This ensures that complex predictive insights are presented in an intuitive, dashboard-driven format that business leaders can easily interpret and act upon, rather than sifting through raw spreadsheets.

Third, the platform utilizes SAP Data Intelligence for real-time insights (Option D). This component orchestrates data from across diverse sources-both SAP and non-SAP-ensuring that the predictive models are fed with the most current and relevant information.

By integrating these three pillars-intelligence (AI

/ML), visualization (Analytics), and orchestration (Data Intelligence)-SAP BTP transforms the SAP Business Suite into a forward-looking enterprise system. This allows organizations to anticipate market shifts, optimize their supply chains, and personalize customer interactions with a level of precision that was previously impossible, ultimately driving better business outcomes and long-term sustainability.

NEW QUESTION # 35

......

Our company will provide first class service on C_BCBTP_2502 exam questions for our customers. As a worldwide leader in offering the best C_BCBTP_2502 exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in C_BCBTP_2502 Study Materials application as well as interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our C_BCBTP_2502 exam questions
