NEW QUESTION # 85

An administrator has received an alert AI303551 - VolumeGroupProtectionFailed details of alerts as follows:
Which error logs should the administrator be reviewing to determine why the relative service is down:

- A. solver.log
- B. arithmos.ERROR

Answer: B

Explanation:

The error log that the administrator should review to determine why the relative service is down is arithmos.

ERROR. Arithmos is a service that runs on each CVM and provides volume group protection functionality for Volumes. Volume group protection is a feature that allows administrators to create protection policies for volume groups, which define how often snapshots are taken, how long they are retained, and where they are replicated. If arithmos.ERROR log shows any errors or exceptions related to volume group protection, it can indicate that the relative service is down or not functioning properly.

NEW QUESTION # 87

What are two ways to manage Objects? (Choose two.)

- A. PC
- B. SSH
- C. API
- D. CLI

Answer: A,C

Explanation:

There are two ways to manage Objects: PC (Prism Central) and API (Application Programming Interface). PC is a web-based user interface that allows administrators to create, configure, monitor, and manage Objects clusters, buckets, users, and policies. API is a set of S3-compatible REST APIs that allows applications and users to interact with Objects programmatically. API can be used to perform operations such as creating buckets, uploading objects, listing objects, downloading objects, deleting objects, and so on.

NEW QUESTION # 88

Users are complaining about having to reconnecting to share when there are networking issues.

Which files feature should the administrator enable to ensure the sessions will auto-reconnect in such events?

- A. Durable File Handles
- B. Connected Shares
- C. Multi-Protocol Shares
- D. Workload Optimization

Answer: A

Explanation:

The Files feature that the administrator should enable to ensure the sessions will auto-reconnect in such events is Durable File Handles. Durable File Handles is a feature that allows SMB clients to reconnect to a file server after a temporary network disruption or a client sleep state without losing the handle to the open file. Durable File Handles can improve the user experience and reduce the risk of data loss or corruption. Durable File Handles can be enabled for each share in the Files Console. Reference: Nutanix

NEW QUESTION # 89

Before upgrading Files or creating a file server, which component must first be upgraded to a compatible version?

- A. FSM
- **B. Prism Central**
- C. FSVM
- D. File Analytics

Answer: B

Explanation:

The component that must first be upgraded to a compatible version before upgrading Files or creating a file server is Prism Central.
