2V0-15.25 Exam Certification Cost & Reliable 2V0-15.25 Dumps Ebook

By adhering to the principle of "quality first, customer foremost", and "mutual development and benefit", our company will provide first class service for our customers. As a worldwide leader in offering the best 2V0-15.25 exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in 2V0-15.25 Study Materials application as well as interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our 2V0-15.25 exam questions. Any time is available; our responsible staff will be pleased to answer your question whenever and wherever you are.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 2	• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
Topic 3	• IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.
Topic 4	• Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
Topic 5	• VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.

Enhance your Exam Preparation by using Real VMware 2V0-15.25

Questions

2V0-15.25 Soft test engine can stimulate the real exam environment, so that you can know the procedures of the exam, and your nerves can be relieved. This version can also build up your confidence for the exam. In addition, 2V0-15.25 exam dumps contain most of knowledge points for the exam, and you can master them as well as improve your ability in the process learning. We also pass guarantee and money back guarantee if you fail to pass the exam, we will return your money if you fail to pass the exam. Free update for 2V0-15.25 Training Materials is also available, and our system will send you the latest version to your email automatically.

VMware Cloud Foundation 9.0 Support Sample Questions (Q33-Q38):

NEW QUESTION # 33
An administrator has successfully deployed and configured the Application Monitoring Telegraf Agent to 30 virtual machines through VMware Cloud Foundation (VCF) Operations.
After 24 hours, the administrator is alerted to the fact that no additional data has been collected since the agents were deployed on the virtual machines.
What could be the possible cause of the issue?

- A. Application monitoring has been configured to use a single Cloud Proxy rather than a Collector Group.
- B. There is a time synchronization issue between the Telegraf Agent and the Cloud Proxy.
- C. There is a compatibility issue between the version of Virtual Machine Hardware and VMware Tools.
- D. The Service Discovery Management Pack has not been configured.

Answer: B

Explanation:
Application Monitoring in VCF Operations uses Telegraf agents running inside virtual machines. These agents forward metrics to the Cloud Proxy, which then sends them to the Operations analytics cluster. One of the most common reasons an agent stops reporting data-especially exactly24 hoursafter deployment-is clock drift or time mismatchbetween the VM (running the Telegraf agent) and the Cloud Proxy.
VCF Operations enforcesstrict timestamp validation. If the timestamps from the agent are outside the acceptable drift window, the Cloud Proxyrejectsincoming data as invalid. In this case, the Telegraf agents appear installed and functional, but no new metrics are received by the analytics engine.
This is a well-known issue documented in VMware Aria/VCF Operations agent-based monitoring, where:
* Agents send metrics with local system time.
* Cloud Proxy enforces time validation to prevent corrupt metric ingestion.
* A drift >5 minutes commonly results inzero data collectiondespite healthy connectivity.
Options B and C cannot stop data flow after exactly 24 hours; they would preventinitialcollection. Option D (virtual hardware/tools compatibility) affects VM operations butnotTelegraf metric time-stamp validation.

NEW QUESTION # 34
An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:
* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.
The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.
The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.
What action must the administrator complete to resolve the issue?

- A. Deploy a new VCF workload domain.
- B. Trigger an inventory synch in VCF Operations fleet management.
- C. Deploy an additional VCF workload domain cluster.
- D. Add the SDDC Manager integration for the VCF instance.

Answer: D

NEW QUESTION # 35

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Deploy a new VCF workload domain.
- B. Trigger an inventory synch in VCF Operations fleet management.
- C. Deploy an additional VCF workload domain cluster.
- D. Add the SDDC Manager integration for the VCF instance.

Answer: D

Explanation:

In VMware Cloud Foundation 9.0 Automation, the Provider Portal must have full visibility into the underlying VCF inventory- includingNSX Managers,clusters,regions,vCenters, andSDDC Manager objects-before new regions can be created for Kubernetes- based deployments (All Apps Orgs).

The issue described:

"The NSX Manager for the workload domain does not appear in the list of available NSX Managers" occurs whenSDDC Manager is not integratedinto VCF Automation. Without this integration, VCF Automation cannot discover workload domains or their associated NSX Managers. As a result, when attempting to create a new region, the NSX Manager list is empty.

The required action is:

Add the SDDC Manager integration under VCF Automation # Provider Portal # Integrations.

This integration enables Automation to pull:

* NSX Manager inventory
* vCenter endpoints
* Workload domain topology
* Cluster details

Only after this integration is complete will the NSX Manager appear and allow region creation.

Option A and D (deploying new WLD or cluster) are unnecessary-inventory access is the problem, not resources.

Option B (triggering inventory sync) cannot work becauseno SDDC Manager integration exists.

NEW QUESTION # 36

An administrator is troubleshooting a vSAN issue. As part of the initial investigation, the following observations were identified:

* vSAN cluster capacity is decreased.
* Some virtual machine components are marked as degraded.
* Component rebuild process started automatically.

What is the cause of this issue?

- A. Too many virtual machines were created in the vSAN cluster.
- B. VM migration to another cluster is in progress.
- C. vSAN license capacity is too small.
- D. Physical disk failure.

Answer: D

Explanation:

The symptoms described-reduced cluster capacity,degraded virtual machine components, andautomatic component rebuild operations-are classic indicators of avSAN disk failure or disk group degradation.

vSAN continuously monitors the health of disks, disk groups, and network paths. When a physical disk or disk group becomes unavailable, vSAN will:

* Mark affected components as degradedbecause the required number of replicas or witnesses cannot be maintained.
* Trigger automatic repair/rebuild operations, provided there are enough healthy disks remaining in the cluster to satisfy the storage policy (e.g., FTT=1, RAID1/5/6).
* Reduce available storage capacitybecause the failed device is removed from contributing to the vSAN datastore.

These behaviors align directly with documented vSAN failure-response logic, which states thatcomponent rebuilds begin automatically after a disk failure, assuming the cluster still has adequate resources.
The other options do not match the symptoms:
* A. VM migration to another cluster# does not reduce vSAN capacity nor trigger component rebuilds.
* B. vSAN license capacity too small# restricts features, not component state or capacity changes.
* C. Too many VMs created# may cause capacity pressure but doesnotmark components degraded or trigger automated rebuilds.
Onlyphysical disk failureaccurately explains all three observations simultaneously.

NEW QUESTION # 37

An administrator has created an alarm for an object in VMware Cloud Foundation (VCF) Operations. The alert does not show up In the alert pane despite being configured on the object.
Parameters:
* Symptom definition: Read Latency (ms) is higher than 1 ms.
* Alert definition: Alert is triggered as soon as the latency is higher than the 1 ms defined in the symptom definition.
* Object type: Virtual Machine.
What is the reason the alert does not show up in the alert view?

* A. The alert is not enabled in the policy.
* B. The metric used in the symptom definition does not apply to this object type.
* C. This type of alert must be forwarded from VMware Cloud Foundation Operations for Logs.
* D. The administrator is missing the privileges to view alerts for this object.

Answer: A

Explanation:
In VMware Cloud Foundation 9.0, VCF Operations (vROps-based) usespoliciesto control which alerts, symptoms, and metrics are evaluated for a given object. Creating an alert definition and symptomalone is not sufficient; the alert must beassociated with and enabled in a policythat is actively applied to the target object (in this case, a Virtual Machine). The documentation shows that when you create an alert definition, there is an explicitPolicies step, where you select the policy (for example, the default policy) so that the alert becomes active for objects governed by that policy.
The metric "Read Latency (ms)" is valid for virtual-machine-related objects: VCF Operations documents Read Latency metrics at the VM disk and VM-datastore link level (for Disk and Datastore metrics on Virtual Machines). Therefore, option B (metric not applicable) is incorrect. No requirement exists that such a performance alert must be forwarded from VCF Operations for Logs (D); log-based alerts are a separate alert type.
If the alert definition is not enabled in the effective policy for that VM, VCF Operations will not evaluate the symptom or generate the alert, and it will not appear in the alert pane-even though the definition technically exists. This matches optionCexactly.

NEW QUESTION # 38

......

Our PDF version is a printable document of exam questions which are real and updated. We have included original VMware Cloud Foundation 9.0 Support questions in this format so that can you get ready for the exam quickly by just memorizing them. This format of VMware Cloud Foundation 9.0 Support (2V0-15.25) test questions is also usable on smart devices such as laptops, tablets, and smartphones.
