CompTIA SecAI+ Certification Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

A web server shows signs of SQL injection. Which control BEST prevents this?

- A. Runtime application self-protection (RASP)
- **B. Input validation**
- C. Account lockout
- D. SSL encryption

Answer: B

Explanation:

Validating and sanitizing user input is the core SQLi defense.

NEW QUESTION # 26

An employee wants a consulting company to procure a data set that contains age, ethnicity, and diabetes status. During development, the employer wants to ensure the integrity of the data.

Which of the following is the best strategy to accomplish this task?

- A. Querying the model
- **B. Implementing checksums**
- C. Conducting human evaluation
- D. Enabling log monitoring

Answer: B

Explanation:

Checksums ensure data integrity by detecting any unauthorized or accidental changes to the dataset. This provides a reliable way to confirm that sensitive attributes such as age, ethnicity, and diabetes status remain unaltered during development.

NEW QUESTION # 27

An organization develops a chatbot with the following requirements:

- Does not provide harmful or explicit responses
- Must use clean and professional language
- Ensures that responses are accurate

Which of the following should the organization conduct after the chatbot is fully developed but before a customer-facing deployment?

- A. Regression modeling and minimization
- B. Data labeling and classification
- **C. Guardrail testing and validation**
- D. Model auditing and evaluation

Answer: C

Explanation:

Guardrail testing and validation ensure the chatbot adheres to safety, language, and accuracy requirements before deployment. This step verifies the model will not generate harmful, explicit, or unprofessional responses in a customer-facing environment.

NEW QUESTION # 28

A SOC analyst notices a sudden spike in outbound traffic from a server. The traffic is being sent continuously to an unknown external IP address. Which of the following BEST describes this behavior?

- **A. Data exfiltration**
- B. Brute-force attack
- C. Failed command-and-control communication
- D. Lateral movement

Answer: A

Explanation:

A sudden and sustained outbound transfer to an unknown IP is a common sign of data exfiltration.

NEW QUESTION # 29

An organization is developing and implementing AI features into a customer service application.

Which of the following practices should the organization put in place before releasing the application for customer trials?

- **A. Data masking and sanitization**
- B. Approved AI vendor lists
- C. External compliance audits
- D. Third-party risk management

Answer: A

Explanation:

Before releasing AI features for customer trials, it is critical to protect sensitive information that may be used during testing. Data masking and sanitization ensure customer or corporate data is anonymized or obfuscated, reducing the risk of data exposure while

still allowing realistic evaluation of the AI system.

NEW QUESTION # 30
