Free PDF Quiz 2026 Juniper Fantastic JN0-481 Practical Information

If you pay more attention to the privacy protection on buying JN0-481 training materials, you can choose us. We respect your right to privacy. If you choose us, we ensure that your personal identification will be protected well. Once the order finishes, your personal information such as your name and email address will be concealed. Furthermore, we offer you free demo for you to have a try before buying JN0-481 Exam Dumps, so that you can have a deeper understanding of what you are going to buy. You just need to spend about 48 to 72 hours on learning, and you can pass the exam. So don't hesitate, just choose us!

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q45-Q50):

NEW QUESTION # 45
In Juniper Apstra, what are three valid deploy modes when assigning systems to your blueprint?
(Choose three.)

- A. Drain
- B. Deploy
- C. Standby
- D. Ready
- E. OOS-Ready

Answer: A,B,D

NEW QUESTION # 46
In the Juniper Apstra Ul. which two resource types would be created in the Resources menu?
(Choose two.)

- A. IP pools
- B. bridge domain identifier (BDI)
- C. DHCP pools
- D. ASN pools

Answer: A,D

Explanation:
The Resources menu in the Juniper Apstra UI allows you to create and manage various types of resources that are assigned to different elements of the network.
Resources include the following types:
- IPv4 (including Host IPv4)
- IPv6 (including Host IPv6)
- ASN (autonomous system number)
- VNI (virtual network identifier)
- VLAN (virtual local area network)
Integer (used for pool type VLAN in local pools in Freeform blueprints) Therefore, the correct answer is C and D. ASN pools and IP pools are two types of resources that can be created in the Resources menu. Bridge domain identifier (BDI) and DHCP pools are not applicable in this scenario, because they are not part of the resources types supported by Juniper Apstra.

NEW QUESTION # 47
Which two statements ate correct about the graph query output shown in the exhibit? (Choose two.)

```
{
  "count": 1,
  "items": [
    {
      "interface": {
        "id": "0be7ea4e-d691-44ff-aec7-da4fb2836555",
        "type": "interface",
        "label": null,
        "description": "to.cf-l2-esi-access",
        "evpn_esi_mac": null,
        "if_name": "ae2",
        "if_type": "port_channel",
        "ipv4_addr": null,
        "ipv4_addr_type": null,
        "ipv4_enabled": null,
        "ipv6_addr": null,
        "ipv6_addr_type": null,
        "ipv6_enabled": null,
        "lag_mode": "lacp_active",
        "loopback_id": null,
        "mlag_id": null,
        "mode": null,
        "po_control_protocol": null,
        "port_channel_id": 2,
        "property_set": null,
        "protocols": null,
        "ref_count": null,
        "subintf_id": null,
        "tags": null,
        "vlan_id": null
      }
    }
```

- A. The interface has tags assigned to it.
- B. The switch in the output is a Juniper device.
- C. The interface has an IP address assigned to it.
- D. The output shows a LAG connection.

Answer: B,D

Explanation:
The graph query output shown in the exhibit is a JSON representation of an interface node and its properties in the Apstra graph database. Based on the output, we can infer the following statements:
The output shows a LAG connection. This is true because the interface node has a property called lag_mode which is set to lacp_active, indicating that the interface is part of a link aggregation group (LAG) that uses the Link Aggregation Control Protocol (LACP) to negotiate the link state and parameters.
The switch in the output is a Juniper device. This is true because the interface node has a property called if_name which is set to ae, indicating that the interface name follows the Juniper naming convention for aggregated Ethernet interfaces.
The interface has an IP address assigned to it. This is false because the interface node has properties called ipv4_addr and ipv6_addr which are both set to null, indicating that the interface does not have any IPv4 or IPv6 address configured.
The interface has tags assigned to it. This is false because the interface node has a property called tags which is set to null, indicating that the interface does not have any tags associated with it.

NEW QUESTION # 48
You have a virtual network that needs controlled access to other virtual networks in the same routing zone. Using the Juniper Apstra Ul. which feature would be used to accomplish this task?

- A. routing policy

- B. security policy
- C. anti-affinity policy
- D. interface policy

Answer: B

Explanation:
A security policy is the feature that would be used to accomplish the task of controlling access to other virtual networks in the same routing zone using the Juniper Apstra UI. A security policy allows you to define rules that specify which traffic is allowed or denied between different virtual networks, IP endpoints, or routing zones. A security policy can be applied to one or more virtual networks in the same routing zone, and it can use various criteria to match the traffic, such as source and destination IP addresses, protocols, ports, or tags. A security policy can also support DHCP relay, which enables the forwarding of DHCP requests from one virtual network to another.

NEW QUESTION # 49
You are building an IP fabric and have decided to use Junos devices to create an EBGP underlay. You must ensure that traffic is load balanced throughout your fabric.
You must also ensure that regardless of the path used through the fabric that all traffic is handled consistently and load balanced predictably.
According to Juniper Networks, what are three best practices that you should employ to help you achieve the desired behavior? (Choose three.)

- A. All spine devices should be the same model including linecards and port density.
- B. Each leaf device should be a different model including linecards and port density.
- C. Leaf devices should use a variety of link speeds for each uplink to the spine devices.
- D. Each leaf device must use the same link speed for all uplinks to the spine devices.
- E. All leaf devices should be the same model including linecards and port density.

Answer: A,D,E

NEW QUESTION # 50
......

Our JN0-481 exam materials are famous among candidates. Once they need to prepare an exam, our JN0-481 study materials are their first choice. As you know, it is troublesome to get the JN0-481certificate. Now, you are fortunate enough to come across our JN0-481 Exam Guide. We have free demos on the website for our customers to download if you still doubt our products, and you can check whether it is the right one for you before purchase as well.

Reliable JN0-481 Dumps Ebook: https://www.testpdf.com/JN0-481-exam-braindumps.html

If you are still confused whether to use our JN0-481 exam preparation material, then you can check out and download free demo for JN0-481 exam products, But it would not be a problem if you buy our JN0-481 training materials, Easily being got across by exam whichever level you are, our JN0-481 practice materials have won worldwide praise and acceptance as a result, While it's possible to earn your Cloud Platform and Infrastructure cert with any of these exams (or several others that are not Reliable JN0-481 Dumps Ebook-specific), there is an advantage to choosing the most appropriate test.

The security policy is managed in central locations and then enforced JN0-481 Practical Information throughout the network based on context-specific variables, They believe that they deal with completed and fully developed facts.
