Compatible Salesforce Plat-Admn-301 Desktop Based Practice Software

We provide you with free update for 365 days for Plat-Admn-301 study guide after purchasing, and the update version will be sent

to your email automatically, you just need to check your email for the update version. In addition, we have a professional team to compile and review Plat-Admn-301 exam materials, therefore the quality can be guaranteed, and you can use them at ease. Plat-Admn-301 Exam Materials cover most of the knowledge points for the exam, and you can master the major knowledge points for the exam as well as improve your professional ability in the process of learning.

Salesforce Plat-Admn-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Objects and Applications: This section of the exam measures the skills of a Salesforce Business Analyst and covers selecting appropriate object and application-level solutions to meet business needs. It focuses on identifying when to use master-detail relationships, lookups, junction objects, related lists, record types, Schema Builder, and Object Creator. The section also includes improving UI and user experience using App Manager, Lightning App Builder, Dynamic Forms, standard Lightning components, console apps, and tools like the Lightning page analyze button.
Topic 2	<ul style="list-style-type: none"> • Auditing and Monitoring: This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.
Topic 3	<ul style="list-style-type: none"> • Data and Analytics Management: This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.
Topic 4	<ul style="list-style-type: none"> • Cloud Applications: This section of the exam measures skills of Salesforce Consultant and covers the standard Salesforce capabilities that support sales and service operations. It includes features such as products, price books, schedules, orders, quotes, and the tools that help with forecasting and territory management. The section also describes how to create Salesforce Knowledge articles, manage entitlements, support service workflows, and enable interactions through chat, case feed, Omni-Channel, console apps, and Experience Cloud sites. It also introduces the broader Salesforce suite that extends core platform functionality.

Salesforce Certified Platform Administrator II Sample Questions (Q173-Q178):

NEW QUESTION # 173

AW Computing wants to enable a backup resource to assign permissions while restricting the backup resource's ability to create or modify permission sets.

Which feature should be employed to accomplish this request?

- **A. Delegated Administrator**
- B. Assignment Rules
- C. Customize Application Permission
- D. View All Users Permission

Answer: A

Explanation:

Delegated Administration allows administrators to delegate certain user management tasks to non-administrators. For example, a delegated administrator can assign permission sets to users in specified roles or public groups without having full access to modify permission sets. References: https://help.salesforce.com/s/articleView?id=sf.admin_usermgt_delegated.htm&type=5

NEW QUESTION # 174

Sales managers at Ursa Major Solar have asked for some additional automation around opportunity reminders. If the opportunity is in the Proposal stage a week before the close date, they want an email sent to the opportunity owner and manager. If the Budget Approved custom field is checked, the managers want to be notified immediately. How should these requirements be met without using code?

- A. Create a schedule-triggered flow. Configure the trigger to flow weekly.
- B. Create a record-triggered flow with scheduled paths. Configure the trigger to flow before the record is saved.
- C. Create a schedule-triggered flow for the Opportunity object. Configure the trigger to flow daily.
- **D. Create a record-triggered flow with scheduled paths. Configure the trigger to flow after the record is saved.**

Answer: D

Explanation:

A record-triggered flow lets you automate actions when a record is created or updated. You can use scheduled paths to schedule actions relative to a date field on the record, such as close date. You should configure the trigger to flow after the record is saved so that you can access the updated field values. References:

https://help.salesforce.com/s/articleView?id=sf.flow_concepts_trigger_types_record.htm&type=5

NEW QUESTION # 175

The administrator at Cloud Kicks is evaluating the capabilities of Schema Builder to create custom objects and custom fields. The administrator likes the user interface of the Schema Builder, as opposed to the new object and field wizards, but also notices some limitations.

What needs to be configured from the object manager instead of Schema Builder?

- A. Enable field history tracking
- B. Allow Reports and Activities
- **C. Add custom fields to the page layout.**
- D. Make available for Customer Postal.

Answer: C

Explanation:

While the Schema Builder is a powerful tool in Salesforce for visually creating and managing custom objects and fields, there are certain configurations that must be done in Object Manager rather than Schema Builder.

One of these configurations is enabling field history tracking.

* Field History Tracking:

* Field history tracking cannot be configured directly within Schema Builder. This setting must be enabled from within the Object Manager, where administrators can specify which fields on an object should have their changes tracked.

* Enabling field history tracking involves navigating to the object in Object Manager, accessing the field history tracking settings, and selecting specific fields to track.

* Limitations of Schema Builder:

* Schema Builder is useful for quickly creating custom objects, relationships, and fields, but it does not support all configurations, such as enabling field history tracking, defining object-level permissions, or setting advanced object configurations.

* For these types of configurations, administrators need to return to Object Manager where these settings are available.

Incorrect options:

* Add custom fields to the page layout: This task is typically done within Object Manager, but Schema Builder does allow customization of page layouts to a certain extent through drag-and-drop.

* Make available for Customer Portal: Schema Builder does not control portal availability; however, this is managed through Object Manager settings related to record visibility for portal users.

* Allow Reports and Activities: This setting can be configured in Schema Builder when initially creating an object, but further refinements and permission settings must often be done in Object Manager.

In conclusion, enabling field history tracking requires access to the Object Manager, as it cannot be configured through Schema Builder.

Reference: According to Salesforce documentation, certain object and field configurations, such as field history tracking, are only accessible through Object Manager and not through Schema Builder

NEW QUESTION # 176

An administrator has a request to write a report listing accounts that have sales from this year and that have a completed activity in the last 30 days.

What reporting feature should the administrator employ to provide only the list of accounts, without listing the details of the opportunities?

- A. Filter Logic
- **B. Cross-Filter**
- C. Summary Report
- D. Joined Report

Answer: B

Explanation:

A cross-filter lets you filter records based on related objects and their fields. For example, you can filter accounts that have at least one opportunity from this year and at least one completed activity in the last 30 days. References:

https://help.salesforce.com/s/articleView?id=sf.reports_cross_filters.htm&type=5

NEW QUESTION # 177

Cloud Kicks uses a Lightning web component to provide instructions to sales reps. An administrator needs to correct a spelling error in the displayed text in one of the Lightning web components.

What is the recommended tool to make the change?

- **A. VisualStudio Code**
- B. Developer Console
- C. Developer Org
- D. Salesforce Lightning Inspector

Answer: A

Explanation:

VisualStudio Code is a recommended tool to make the change in the displayed text in one of the Lightning web components.

VisualStudio Code is an integrated development environment (IDE) that supports Salesforce development tools such as Salesforce Extensions for Visual Studio Code, Salesforce CLI, and Lightning Web Components. You can use VisualStudio Code to create, edit, debug, and deploy Lightning web components and other Salesforce metadata. To make the change in the displayed text, you need to open the HTML file of the Lightning web component in VisualStudio Code and modify the text element accordingly.
