Our Certificate of Cloud Security Knowledge v5 (CCSKv5.0) test torrent boost 99% passing rate and high hit rate so you can have a high probability to pass the exam. Our CCSK study torrent is compiled by experts and approved by the experienced professionals and the questions and answers are chosen elaborately according to the syllabus and the latest development conditions in the theory and the practice and based on the real exam. The questions and answers of our CCSK Study Tool have simplified the important information and seized the focus and are updated frequently by experts to follow the popular trend in the industry. Because of these wonderful merits the client can pass the exam successfully with high probability.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q311-Q316):

NEW QUESTION # 311

Any given processor and memory will nearly always be running multiple workloads, often from different tenants.

- A. True
- B. False

Answer: A

NEW QUESTION # 312

Which of the following is not one of the essential characteristics as defined by NIST 800-145?

- A. On-demand Shelf service
- B. Rapid Elasticity
- C. Resource Pooling
- D. Broad Network Access

Answer: A

Explanation:

The key characteristic is on-demand self-service and not shelf' service.

NEW QUESTION # 313

Which of the following statements best describes an identity federation?

- A. The connection of one identity repository to another
- B. A group of entities which have decided to exist together in a single cloud
- C. A library of data definitions
- D. Identities which share similar attributes
- E. Several countries which have agreed to define their identities with similar attributes

Answer: A

NEW QUESTION # 314

Why is it essential to include key metrics and periodic reassessment in cybersecurity governance?

- A. To document all cybersecurity incidents and monitor them overtime
- B. To ensure effective and continuous improvement of security measures
- C. To reduce the number of security incidents to zero
- D. To meet legal requirements and avoid fines

Answer: B

Explanation:

Including key metrics and periodic reassessment in cybersecurity governance is essential for ensuring the effective and continuous improvement of security measures. Metrics provide a way to assess the current state of security, identify gaps, and measure progress over time. Periodic reassessment allows organizations to adapt to emerging threats and vulnerabilities, ensuring that security controls remain relevant and effective as the threat landscape evolves.

While meeting legal requirements is important, the primary reason for metrics and reassessment is continuous improvement, not just legal compliance. Documenting cybersecurity incidents is important, but the main focus of key metrics and reassessment is improving and adapting security strategies. Zero security incidents is not feasible; the goal is to reduce incidents and manage risk, not to eliminate all incidents entirely.

NEW QUESTION # 315

In the context of cloud security, which approach prioritizes incoming data logs for threat detection by applying multiple sequential filters?

- A. Parallel processing approach
- B. Unfiltered bulk analysis
- C. Cascade-and-filter approach
- D. Streamlined single-filter method

Answer: C

Explanation:

The Cascade-and-filter approach is a method used in cloud security to handle incoming data logs efficiently. It prioritizes logs for threat detection by applying multiple sequential filters, where each filter progressively narrows down the data. This approach helps in: Layered threat detection: Early filters eliminate non-critical data, while subsequent filters perform more detailed analysis.

Efficient processing: Reduces the volume of data passed through advanced and resource-intensive filters.

Improved accuracy: Allows focusing on the most relevant security events.

For example, in a cloud environment, the first filter might check for known malicious IP addresses, the second might look for suspicious file types, and subsequent filters may perform behavioral analysis or anomaly detection.

Why Other Options Are Incorrect:

B . Parallel processing approach: This method processes logs simultaneously, not sequentially, and is less efficient for prioritizing threats.

C . Streamlined single-filter method: Uses a single filter for all data, which lacks depth and thoroughness in identifying complex threats.

D . Unfiltered bulk analysis: This approach is resource-intensive and inefficient, as it does not prioritize or filter logs.
