NEW QUESTION # 15

What types of Snowflake functions are available for data analysis and manipulation? (Select all that apply)

- A. Complex functions
- B. System functions
- C. Aggregate functions
- D. Scalar functions

Answer: B,C,D

Explanation:

Snowflake functions include scalar, aggregate, and system functions for data analysis and manipulation.

NEW QUESTION # 16

How does operationalizing data contribute to maintaining reports and dashboards for business requirements?

- A. Operationalizing data complicates dashboard sharing.
- B. It restricts data updates, affecting dashboard accuracy.
- C. Operationalizing data ensures consistent and efficient usage.
- D. It limits data accessibility for effective dashboard usage.

Answer: C

Explanation:

Operationalizing data ensures consistent and efficient usage of reports and dashboards.

NEW QUESTION # 17

How do user-defined functions (UDFs) contribute to data analysis in SQL?

- A. UDFs restrict data analysis to predefined operations.
- B. UDFs hinder query optimization.
- C. They allow customization and extension of SQL functionalities for specific data operations.
- D. UDFs can only be used with materialized views.

Answer: C

Explanation:

UDFs allow customization and extension of SQL functionalities, enabling specific data operations beyond predefined limits.

NEW QUESTION # 18

What steps are typically involved in troubleshooting query performance issues in Snowflake?

(Select all that apply)

- A. Reviewing query history and usage logs
- B. Modifying warehouse configurations
- C. Examining Query Profile attributes
- D. Analyzing system hardware for faults

Answer: A,B,C

Explanation:

Troubleshooting query performance often involves reviewing query history, adjusting warehouse configurations, and examining Query Profile attributes for optimization.

NEW QUESTION # 19

A data analyst accidentally dropped a crucial table, 'SALES DATA', containing historical sales information. The table was dropped 5 days ago. The data retention period for the Snowflake account is set to the default value. The analyst needs to recover the table with all its data. What is the MOST efficient and reliable method to recover the 'SALES DATA' table in Snowflake?

- A. create a clone of the table using Time Travel at a point in time before it was dropped, using the 'CREATE TABLE

CLONE SALES DATAAT (OFFSET -86400 5)' command.

- B. Use the 'TIME TRAVEL' function in a SELECT statement to retrieve the data and recreate the table.
- C. Request Snowflake Support to restore the table from their backups.
- **D. Restore the table using the 'UNDROP TABLE SALES DATA' command.**
- E. create a clone of the table using Time Travel at a point in time before it was dropped, using the 'CREATE TABLE CLONE SALES DATA BEFORE(STATEMENT y command.

Answer: D

Explanation:

The 'UNDROP TABLE command is the most efficient and direct method to recover a dropped table, as long as it's within the data retention period. Since the table was dropped 5 days ago and the default retention period is typically sufficient (can be up to 90 days in Enterprise Edition), 'UNDROP TABLE should work. While options B and E are valid uses of cloning and time travel, they involve creating a new table and are less direct. Requesting Snowflake support (C) is unnecessary for a simple table recovery. Option D will require data extraction and recreating the table structure, which is tedious and time-consuming compared to 'UNDROP'
