To attempt the USGBC LEED-Green-Associate exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the LEED Green Associate Exam (LEED-Green-Associate) exam demands a lot of time and effort, we designed the LEED Green Associate Exam (LEED-Green-Associate) exam dumps in such a way that you won't have to go through sleepless study nights or disturb your schedule. Before starting the LEED Green Associate Exam (LEED-Green-Associate) preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the components that possess more weightage in the LEED Green Associate Exam (LEED-Green-Associate) exam.

USGBC LEED Green Associate Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

Which permanently installed building products are addressed in the Materials and Resources Credit category calculation?

- A. Process equipment
- B. Formwork for concrete
- **C. Framing**
- D. Elevators

Answer: C

Explanation:

The Materials and Resources Credit category calculation addresses the permanently installed building products that are part of the building's structure, enclosure, and interior elements. These include framing, flooring, insulation, windows, doors, interior walls, ceilings, and finishes. Process equipment, elevators, furniture, and formwork for concrete are not included in the calculation.

NEW QUESTION # 55

When a developer builds a new shopping center in a rural area, one externality might be

- A. an increase in the fees for customer parking

- B. an increase in traffic on adjacent roads
- C. an increase in profits for the developer
- D. an increase in installation of rooftop solar

Answer: B

Explanation:

An externality is a consequence of an economic activity that affects other parties who are not directly involved in the activity. Externalities can be positive or negative, depending on whether they create benefits or costs for others. When a developer builds a new shopping center in a rural area, one externality might be an increase in traffic on adjacent roads. This is a negative externality because it imposes costs on other road users who are not part of the development project, such as increased travel time, fuel consumption, air pollution, noise pollution, and accident risk¹³. References: LEED v4 Green Associate Candidate Handbook¹, Investopedia's Externality

NEW QUESTION # 56

Which of the following practices ensures that building systems are designed efficiently, installed appropriately and operate as intended?

- A. Positive feedback loop
- B. Building retrocommissioning
- C. Negative feedback loop
- D. Building commissioning

Answer: D

NEW QUESTION # 57

LEED certification steps generally proceed in which of the following order?

- A. Application Preparation, Application Review, Project Registration, Submission, Certification
- B. Application Preparation, Project Registration, Application Review, Submission, Certification
- C. Select LEED rating system, Submission, Application Review, Project Registration, Certification
- D. Project Registration, Application Preparation, Submission, Application Review, Certification

Answer: D

Explanation:

Explanation

This is the correct order of the LEED certification process for most projects¹. The first step is to register the project on LEED Online and pay the registration fee². The second step is to prepare the application by collecting and uploading the required information and documents according to the chosen rating system and credits². The third step is to submit the application and pay the certification fee². The fourth step is to undergo the application review by a LEED accredited third party, which may request clarifications or corrections². The final step is to receive the certification decision and the LEED plaque and certificate².

Life-cycle cost analysis of a new construction includes consideration of cost of purchasing window glazing cost of adding accessible parking cost of challenging a real estate tax assessment cost of subsidizing the use of public transportation

Life-cycle cost analysis (LCCA) is a method for assessing the total cost of owning a facility or running a project. It considers all the costs associated with obtaining, owning, and disposing of an investment¹. The cost of purchasing window glazing is one of the initial costs that affects the energy performance and thermal comfort of a building². Therefore, it is included in the LCCA of a new construction.
