Quiz 2026 Microsoft AZ-204 – High Pass-Rate Test Practice

In the world in which the competition is constantly intensifying, owning the excellent abilities in some certain area and profound knowledge can make you own a high social status and establish yourself in the society. Our product boosts many advantages and varied functions to make your learning relaxing and efficient. The client can have a free download and tryout of our AZ-204 Exam Torrent before they purchase our product and can download our study materials immediately after the client pay successfully.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q194-Q199):

NEW QUESTION # 194

You need to implement the Azure Function for delivery driver profile information.

Which configurations should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Policy segments

- server
- context
- on-error
- set-status
- when-error
- override-status

Answer Area

```
< Policy segment >
<base />
<choose>
  <when condition = " @ Policy segment .Response.StatusCode == 500
    && Policy segment .LastError.Message.Contains
    " conflict = " )) " >
    <return-response>
  </return-response>
  <Policy segment >
  </return-response>
</when>
<otherwise />
</choose>
<Policy segment >
```

Answer:

Explanation:

Policy segments

- server
- context
- on-error
- set-status
- when-error
- override-status

Answer Area

```
< on-error >
<base />
<choose>
  <when condition = " @ context .Response.StatusCode == 500
    && context .LastError.Message.Contains
    " conflict = " )) " >
    <return-response>
      < set-status >
    </return-response>
  </when>
  <otherwise />
</choose>
< on-error >
```

Explanation:

```
< on-error >
<base />
<choose>
  <when condition = " @ context .Response.StatusCode == 500
    && context .LastError.Message.Contains
    " conflict = " )) " >
    <return-response>
      < set-status >
    </return-response>
  </when>
  <otherwise />
</choose>
< on-error >
```

Box 1: on-error

Policies in Azure API Management are divided into inbound, backend, outbound, and on-error.

If there is no on-error section, callers will receive 400 or 500 HTTP response messages if an error condition occurs.

Box 2: context

Box 3: context

Box 4: set-status

The return-response policy aborts pipeline execution and returns either a default or custom response to the caller. Default response is 200 OK with no body.

Custom response can be specified via a context variable or policy statements.

Syntax:

```
<return-response response-variable-name="existing context variable">
```

```
<set-header/>
```

```
<set-body/>
```

<set-status/>

</return-response>

Box 5: on-error

NEW QUESTION # 196

You develop a web application.

You need to register the application with an active Azure Active Directory (Azure AD) tenant.

Which three actions should you perform in sequence? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Select **Manifest** from the middle-tier service registration.

In Enterprise Applications, select **New application**.

Add a Cryptographic key.

Create a new application and provide the name, account type, and redirect URL.

Select the Azure AD instance.

Use an access token to access the secure resource.

In App Registrations, select **New registration**.

Answer Area

←

→

↑

↓

Answer:

Explanation:

Actions

Select **Manifest** from the middle-tier service registration.

In Enterprise Applications, select **New application**.

Add a Cryptographic key.

Create a new application and provide the name, account type, and redirect URL

Select the Azure AD instance.

Use an access token to access the secure resource.

In App Registrations, select **New registration**.

Answer Area

In App Registrations, select **New registration**.

Select the Azure AD instance.

Create a new application and provide the name, account type, and redirect URL

NEW QUESTION # 197

You are developing an Azure Web App. You configure TLS mutual authentication for the web app.

You need to validate the client certificate in the web app. To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

| Property | Value |
|----------|-------|
|----------|-------|

Client certificate location

| |
|---------------------|
| HTTP request header |
| Client cookie |
| HTTP message body |
| URL query string |

Encoding type

| |
|---------|
| HTML |
| URL |
| Unicode |
| Base64 |

Answer:

Explanation:

Property

Value

Client certificate location

| | |
|---------------------|---|
| | ▼ |
| HTTP request header | |
| Client cookie | |
| HTTP message body | |
| URL query string | |

Encoding type

| | |
|---------|---|
| | ▼ |
| HTML | |
| URL | |
| Unicode | |
| Base64 | |

Explanation

Property

Value

Client certificate location

| | |
|---------------------|---|
| | ▼ |
| HTTP request header | |
| Client cookie | |
| HTTP message body | |
| URL query string | |

Encoding type

| | |
|---------|---|
| | ▼ |
| HTML | |
| URL | |
| Unicode | |
| Base64 | |

Accessing the client certificate from App Service.

If you are using ASP.NET and configure your app to use client certificate authentication, the certificate will be available through the `HttpRequest.ClientCertificate` property. For other application stacks, the client cert will be available in your app through a base64 encoded value in the "X-ARR-ClientCert" request header. Your application can create a certificate from this value and then use it for authentication and authorization purposes in your application.

NEW QUESTION # 198

You need to ensure receipt processing occurs correctly.

What should you do?

- A. Use blob leases to prevent concurrency problems
- B. Use blob metadata to prevent concurrency problems
- C. Use blob properties to prevent concurrency problems

- D. Use blob SnapshotTime to prevent concurrency problems

Answer: D

Explanation:

You can create a snapshot of a blob. A snapshot is a read-only version of a blob that's taken at a point in time. Once a snapshot has been created, it can be read, copied, or deleted, but not modified. Snapshots provide a way to back up a blob as it appears at a moment in time.

Scenario: Processing is performed by an Azure Function that uses version 2 of the Azure Function runtime. Once processing is completed, results are stored in Azure Blob Storage and an Azure SQL database. Then, an email summary is sent to the user with a link to the processing report. The link to the report must remain valid if the email is forwarded to another user.
