demo in our website. CCDAK exam prep is 100% verified and reviewed by our expert team who focused on the study of IT exam preparation.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q225-Q230):

NEW QUESTION # 225

Which partition assignment minimizes partition movements between two assignments?

- **A. StickyAssignor**
- B. RoundRobinAssignor
- C. PartitionAssignor
- D. RangeAssignor

Answer: A

Explanation:

The StickyAssignor tries to minimize partition movement by preserving existing assignments as much as possible while still achieving a balanced assignment. This improves consumer stability and reduces rebalances.

From the Kafka Consumer Assignor Documentation:

"The StickyAssignor attempts to preserve as many existing assignments as possible, which helps minimize partition movement between rebalances."

* RoundRobinAssignor focuses on even distribution, not stability.

* RangeAssignor groups partitions by topic and assigns them consecutively, but can lead to imbalances.

* PartitionAssignor is an abstract base class, not an assignor used directly.

Reference: Kafka Consumer Assignor Docs

NEW QUESTION # 226

The rule "same key goes to the same partition" is true unless...

- A. the number of kafka broker changes
- **B. the number of partition changes**
- C. the replication factor changes
- D. the number of producer changes

Answer: B

Explanation:

Increasing the number of partitions causes new message keys to get hashed differently, and breaks the guarantee "same key goes to the same partition". Kafka logs are immutable and the previous messages are not re-shuffled.

NEW QUESTION # 227

You have a Kafka consumer in production actively reading from a critical topic.

You need to update the offset of your consumer to start reading from the beginning of the topic.

Which action should you take?

- A. Temporarily configure the topic's retention.ms parameter to 0 to empty the topic.
- B. Update the consumer configuration by setting auto.offset.reset=earliest.
- **C. Update the consumer group's offset to the earliest position using the kafka-consumer-groups CLI tool.**
- D. Start a new consumer application with the same consumer group id.

Answer: C

Explanation:

To reset offsets for an existing consumer group, you must use the kafka-consumer-groups.sh tool with the --reset-offsets and --to-earliest flags.

From Kafka Consumer Group Tool Documentation:

"You can use the kafka-consumer-groups tool to reset offsets for a consumer group. This is required if the consumer has already committed offsets."

* Setting auto.offset.reset=earliest only works if no committed offset exists.
 * Starting a new consumer with the same group won't reset offsets.
 * Retention settings don't affect committed offsets.
 Reference: Kafka Consumer Group CLI Tool

NEW QUESTION # 228

Which of the following is true regarding thread safety in the Java Kafka Clients?

- A. One Producer needs to be run in one thread
- **B. One Consumer needs to run in one thread**
- C. One Consumer can be safely used in multiple threads
- **D. One Producer can be safely used in multiple threads**

Answer: B,D

Explanation:

KafkaConsumer is not thread-safe, KafkaProducer is thread safe.

NEW QUESTION # 229

Which of the following is not an Avro primitive type?

- A. null
- **B. date**
- C. int
- D. long
- E. string

Answer: B

Explanation:

date is a logical type

NEW QUESTION # 230

.....

This CCDAK certification assists you to put your career on the right track and helps you to achieve your career goals in a short time period. There are several personal and professional benefits that you can gain after passing the Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) certification exam.
