Palo Alto Networks Cloud Security Professional Sample Questions (Q23-Q28):

NEW QUESTION # 23
Which two information types cannot be seen in the data security dashboard? (Choose two).

- A. Top Publicly Exposed Objects By Data Profile
- B. Bucket owner
- C. Total objects
- D. Object content
- E. Object Data Profile by Region

Answer: B,D

Explanation:
The data security dashboard in Prisma Cloud provides a comprehensive overview of the security posture related to cloud data storage. However, certain information types, such as the identity of the bucket owner and the actual content within an object, are not typically displayed on such dashboards. This is because the dashboard focuses more on aggregated data profiles, exposure levels, and compliance-related information rather than individual ownership details or the specific content of objects, which may require

separate detailed analysis or are managed through different security mechanisms.

NEW QUESTION # 24
Which two processes ensure that builds can function after a Console upgrade? (Choose two.)

- A. updating any build environments that have twistcli included to use the latest version
- B. configuring build pipelines to download twistcli at the start of each build
- C. creating a new policy that allows older versions of twistcli to connect the Console
- D. allowing Jenkins to automatically update the plugin

Answer: A,B

Explanation:
Ensuring that builds can function properly after a Console upgrade in Prisma Cloud involves strategies that maintain compatibility and functionality with the latest versions of the Prisma Cloud tools and services.
* Option B: Updating any build environments that have twistcli included to use the latest version is crucial because twistcli is Prisma Cloud's CLI tool used for scanning images, serverless functions, and IaC for vulnerabilities and compliance issues. Ensuring that twistcli is up to date in all build environments guarantees compatibility with the latest features and security definitions provided by Prisma Cloud, as well as ensures that any new or updated policies and checks are accurately enforced during the build process.
* Option C: Configuring build pipelines to download twistcli at the start of each build ensures that the most current version of twistcli is used every time a build is initiated. This approach is beneficial in dynamic CI/CD environments where builds are frequent, and maintaining the latest security posture is critical. By downloading twistcli dynamically, teams can automatically adapt to any updates or changes introduced in the Prisma Cloud Console without manual intervention, ensuring seamless integration and continuous compliance with Prisma Cloud's security standards.

NEW QUESTION # 25
When configuring SSO how many IdP providers can be enabled for all the cloud accounts monitored by Prisma Cloud?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:
Prisma Cloud supports configuring Single Sign-On (SSO) with Identity Providers (IdPs) to streamline user authentication processes. However, for all the cloud accounts monitored by Prisma Cloud, only one IdP provider can be enabled at any given time. This limitation ensures a unified authentication mechanism across the platform, reducing complexity and potential security risks associated with managing multiple IdP configurations.

NEW QUESTION # 26
Put the steps of integrating Okta with Prisma Cloud in the right order in relation to CIEM or SSO okra integration.

Answer:

Explanation:

Explanation:
* Log in to your Okta administrator panel.
* Add an administrator role.
* Generate an API token.
* Configure Okta with Prisma Cloud.
* Run the IAM queries for Okta.

When integrating Okta with Prisma Cloud, especially in the context of Cloud Infrastructure Entitlement Management (CIEM) or Single Sign-On (SSO) integration, the process must be conducted in a sequence that establishes the necessary permissions and configurations for successful integration.

The first step is to log in to the Okta administrator panel. This is where you will manage your Okta settings and begin the integration process.

Once logged in, the next step is to add an administrator role. This involves assigning a role within Okta that has the appropriate permissions to create and manage API tokens and to perform integration tasks.

After setting up the correct administrative role, the third step is to generate an API token. This token will be used to authenticate the communications between Okta and Prisma Cloud. The API token acts as a secure method of verifying that requests made to Prisma Cloud are authorized.

With the API token generated, the fourth step is to configure Okta with Prisma Cloud. This step typically involves entering the API token into Prisma Cloud and setting up the necessary configurations within Prisma Cloud to recognize and accept authentication requests from Okta.

The final step is to run the Identity and Access Management (IAM) queries for Okta within Prisma Cloud.

This step is crucial for CIEM, as it allows Prisma Cloud to query Okta for identity information, user roles, and entitlements, ensuring that the correct permissions are enforced across the cloud environment and that SSO is functioning correctly.

Following these steps in order will ensure that Okta is properly integrated with Prisma Cloud, providing a secure and efficient method for managing cloud access and entitlements.

NEW QUESTION # 27

Which two CI/CD plugins are supported by Prisma Cloud as part of its DevOps Security? (Choose two.).

- A. CircleCI
- B. BitBucket
- C. IntelliJ
- D. Visual Studio Code

Answer: A,B

Explanation:
For CI/CD plugins supported by Prisma Cloud as part of its DevOps Security, BitBucket (Option A) and CircleCI (Option C) are the correct choices. BitBucket is widely used for source code management and collaboration, while CircleCI is a popular CI/CD platform. Prisma Cloud integrates with these tools to scan code repositories and CI/CD pipelines for security issues, ensuring that vulnerabilities are identified and addressed early in the development process. Visual Studio Code (Option B) and IntelliJ (Option D) are IDEs rather than CI/CD tools, and while they are supported by Prisma Cloud for scanning and security purposes, they are not considered CI/CD plugins.
