## Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q92-Q97):

### NEW QUESTION # 92

A company has created three VPCs: a production VPC, a nonproduction VPC, and a shared services VPC. The production VPC and the nonproduction VPC must each have communication with the shared services VPC. There must be no communication between the production VPC and the nonproduction VPC. A transit gateway is deployed to facilitate communication between VPCs. Which route table configurations on the transit gateway will meet these requirements?

- A. Configure a route table with the production and nonproduction VPC attachments associated with propagated routes for each VPC. Create an additional route table with only the shared services VPC attachment associated with propagated routes from each VPC.
- B. Configure a route table with all the VPC attachments associated with propagated routes for only the shared services VPC. Create an additional route table with only the shared services VPC attachment associated with propagated routes from the production and nonproduction VPCs.
- C. Configure a route table with the production and nonproduction VPC attachments associated with propagated routes disabled. Create an additional route table with only the shared services VPC attachment associated with propagated routes from the production and nonproduction VPCs.
- **D. Configure a route table with the production and nonproduction VPC attachments associated with propagated routes for only the shared services VPC. Create an additional route table with only the shared services VPC attachment associated with propagated routes from the production and nonproduction VPCs.**

**Answer: D**

### NEW QUESTION # 93

You are a solutions architect working for a large travel company that is migrating its existing server estate to AWS. You have recommended that they use a custom Virtual Private Cloud (VPC), and they have agreed to proceed.

They will need a public subnet for their web servers and a private subnet for their databases. They also require the web servers and database servers to be highly available, and there is a minimum of two web servers and two database servers each.

How many subnets should you have to maintain high availability?

Response:

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

### NEW QUESTION # 94

You create a new instance, and you are able to connect over Secure Shell (SSH) to its private IP address from your corporate network. The instance does not have Internet access, however. Your internal policies forbid direct access to the Internet. What is required to enable access to the Internet?

Response:

- **A. Ensure that there is a default route in the subnet route table that goes to your on-premises network.**
- B. Assign a public IP address to the instance
- C. Deploy a Network Address Translation (NAT) gateway in the private subnet
- D. Ensure that port 80 and port 443 are not set to DENY in the instance security group

**Answer: A**

### NEW QUESTION # 95

A network engineer needs to build an encrypted connection between an on-premises data center and a VPC. The network engineer attaches the VPC to a virtual private gateway and sets up an AWS Site-to-Site VPN connection. The VPN tunnel is UP after configuration and is working.

However, during rekey for phase 2 of the VPN negotiation, the customer gateway device is receiving different parameters than the parameters that the device is configured to support.

The network engineer checks the IPsec configuration of the VPN tunnel. The network engineer notices that the customer gateway device is configured with the most secure encryption algorithms that the AWS Site-to-Site VPN configuration file provides.

What should the network engineer do to troubleshoot and correct the issue?

- A. Check the native virtual private gateway logs. Restrict the VPN tunnel options to the specific VPN parameters that the virtual private gateway requires.
- B. Check Amazon CloudWatch logs of the virtual private gateway. Restrict the VPN tunnel options to the specific VPN parameters that the virtual private gateway requires.
- C. Check the native customer gateway logs. Restrict the VPN tunnel options to the specific VPN parameters that the customer gateway requires.
- **D. Check Amazon CloudWatch logs of the customer gateway. Restrict the VPN tunnel options to the specific VPN parameters that the customer gateway requires.**

**Answer: D**

Explanation:

Site-to-Site VPN logs can be published to Amazon CloudWatch Logs. This feature provides customers with a single consistent way to access and analyze detailed logs for all of their Site-to-Site VPN connections.

### NEW QUESTION # 96

Which of the following is a good use case for leveraging the transit VPC architecture?

Response:

- **A. Allow on-premises resources access to AWS resources while inspecting all traffic for compliance reasons**
- B. Allow on-premises resources access to any VPC globally in AWS.
- C. Allow on-premises resources access to other remote networks.
- D. Allow on-premises resources access to Amazon Simple Storage Service (Amazon S3).

**Answer: A**
