You can trust the SCAIP practice test and start this journey with complete peace of mind and satisfaction. The SCAIP exam PDF questions will not assist you in Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam preparation but also provide you with in-depth knowledge about the Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam topics. This knowledge will be helpful to you in your professional life. So Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam questions are the ideal study material for quick Saviynt SCAIP exam preparation.

Saviynt exam simulation software is the best offline method to boost preparation for the Saviynt SCAIP examination. The software creates a SCAIP real practice test-like scenario where aspirants face actual SCAIP exam questions. This feature creates awareness among users about Saviynt Certified Advanced IGA Professional (Level 200) exam pattern and syllabus. With the desktop Saviynt SCAIP Practice Exam software, you can practice for the test offline via any Windows-based computer.

Saviynt SCAIP Vce Test Simulator - SCAIP Reliable Exam Testking

Individuals who hold Saviynt SCAIP certification exam demonstrate to their employers and clients that they have the knowledge and skills necessary to succeed in the SCAIP exam. Itbraindumps SCAIP Questions have numerous benefits, including the ability to demonstrate to employers and clients that you have the necessary knowledge and skills to succeed in the actual Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which of the following actions will allow the EIC admin to launch the campaign once the user attributes change?

- A. Schedule a campaign to detect user updates
- B. This cannot be automated and the campaign needs to be launched manually
- **C. Configure User Update Rule to trigger the campaign**
- D. Configure Trigger Campaign upon update under connection attributes

Answer: C

Explanation:

In Saviynt EIC, automation of campaigns based on identity changes is typically achieved using User Update Rules. These rules monitor changes in user attributes (such as department, role, manager, or status) and can trigger predefined actions when conditions are met.

Option A is correct because a User Update Rule can be configured to trigger a campaign when specific attribute changes are detected. This allows organizations to automatically initiate certification campaigns when critical identity attributes change, ensuring continuous compliance and governance without manual intervention.

Option B is incorrect because connection attributes are primarily used for provisioning and integration logic, not for triggering

campaigns. Option C is partially valid in a general sense, but scheduled campaigns do not dynamically react to attribute changes—they run on predefined schedules regardless of changes. Option D is incorrect because Saviynt supports automation through rules. Thus, User Update Rules provide an event-driven mechanism to launch campaigns based on real-time user attribute changes, making Option A the correct answer.

NEW QUESTION # 32

An EIC Administration has a requirement to configure a separate password policy for service accounts along with the password policy for regular accounts. How can this be achieved in EIC?

- A. Define a separate Password Policy for Service Account and select the checkbox Password Policy Service Account field under Password Policy configurations
- **B. Define a separate Password Policy for Service Account and select it in Policy Rule Service Account field under Security System**
- C. Define a separate Password Policy for Service Account and select it in Policy Rule Service Account field under Global Configurations
- D. Only one Password Policy can be defined in the Security System which applies to both regular and service accounts

Answer: B

Explanation:

In Saviynt EIC, password management is highly configurable, allowing organizations to define separate password policies for different account types, including service accounts and regular user accounts. This requirement is achieved by creating a dedicated password policy specifically for service accounts and associating it appropriately within the system.

Option A is correct because Saviynt allows administrators to define a separate Password Policy for Service Accounts and map it using the Policy Rule Service Account field under the Security System configuration.

This ensures that when service account operations such as password resets or provisioning occur, the system enforces the correct policy distinct from regular user accounts.

Option B is incorrect since Saviynt supports multiple password policies and does not restrict to a single policy. Option C is incorrect because simply selecting a checkbox in password policy configuration does not link it to service account usage. Option D is incorrect as Global Configurations do not directly assign password policies for service accounts at the execution level.

Thus, configuring and mapping the policy at the Security System level ensures correct enforcement for service accounts.

NEW QUESTION # 33

To authenticate Saviynt REST API calls, what must be generated before invoking protected APIs?

- **A. OAuth access token**
- B. Transport package
- C. Dataset key
- D. SMTP token

Answer: A

Explanation:

The correct answer is B. OAuth access token. Saviynt documentation states that to integrate Saviynt APIs with Saviynt Identity Cloud, an OAuth access token must be generated to authenticate API calls. This is a foundational concept for the API section of Level 200 because even when using Postman or another client, the request must be authenticated before protected endpoints can be called successfully. Saviynt also documents that its APIs are RESTful APIs used to configure and access various platform features, so token-based authentication is central to practical API usage.

The other options are unrelated to Saviynt REST API authentication. SMTP token is not a Saviynt API authentication model, Transport package is used for moving supported configurations between environments, and Dataset key is not the documented authentication requirement for API access. Saviynt's API reference guide further describes version-specific collections, supported methods, requests, and responses, which is exactly why Postman-based testing in certification labs usually starts with authentication setup first. In practical terms, if the OAuth token is missing or invalid, the request will fail even if the endpoint URL and payload are correct. That is why OAuth access token generation is the correct answer.

NEW QUESTION # 34

The EIC Administrator observed that all accounts were disabled in Saviynt due to incorrect configuration in the target application.

What controls can be implemented in Saviynt to avoid such scenarios?

- A. Set the limit in the external config file
- B. It is not possible to set a limit
- C. Use the accEntThresholdValue attribute in the STATUS_THRESHOLD_CONFIG connection parameter
- **D. Use the accountThresholdValue attribute in the STATUS_THRESHOLD_CONFIG connection parameter**

Answer: D

Explanation:

In Saviynt EIC, mass unintended changes—such as all accounts being disabled due to incorrect target application configuration—can be prevented using threshold-based controls. These controls are defined using the STATUS_THRESHOLD_CONFIG connection parameter, which acts as a safeguard during reconciliation and provisioning processes.

The correct attribute in this scenario is accountThresholdValue (Option D). This parameter allows administrators to define a threshold limit for account status changes (such as disablement). If the number or percentage of accounts being disabled exceeds the defined threshold, Saviynt can stop or flag the operation, preventing large-scale unintended impact.

Option A (accEntThresholdValue) is used for entitlement-level thresholds, not account status changes.

Option B is incorrect because Saviynt does not provide this safeguard mechanism. Option C is also incorrect since such controls are not managed externally but are part of Saviynt's connector configuration.

By using accountThresholdValue within STATUS_THRESHOLD_CONFIG, organizations can implement strong governance and prevent bulk account disablement due to misconfigurations or data issues during account import or reconciliation.

NEW QUESTION # 35

Which option can be used in the REST Connector to perform attribute mapping between target application and EIC?

- A. CreateAccountEntJSON
- B. ImportAccountEntJSON
- **C. CreateAccountJSON**
- D. UpdateAccountJSON

Answer: C

Explanation:

In Saviynt EIC REST connector configurations, attribute mapping between Saviynt and the target application is primarily handled during provisioning operations such as account creation and updates. Among the given options, CreateAccountJSON is the correct configuration where attribute mapping is explicitly defined for provisioning new accounts in the target system.

CreateAccountJSON (Option C) contains the payload structure and field mappings that determine how Saviynt attributes (such as username, email, department, etc.) are translated into the target application's API request format. Administrators define mappings using placeholders and transformation logic to ensure correct data flow from Saviynt to the external system.

Option A (ImportAccountEntJSON) is used for reconciliation (importing accounts and entitlements), not provisioning. Option B (CreateAccountEntJSON) is not a standard REST connector configuration in Saviynt.

Option D (UpdateAccountJSON) is used for modifying existing accounts, but the primary and most commonly referenced mapping configuration for attribute mapping is defined in CreateAccountJSON during initial provisioning.

Thus, CreateAccountJSON is the correct answer for attribute mapping between EIC and the target application.

NEW QUESTION # 36

.....

If the clients have any problems on our SCAIP training guide they could contact our online customer service personnel or contact us by the mails. We will reply their questions sincerely and help them solve their problems at any time since we offer service on 24/7 time format. We provide the best SCAIP Study Guide and hope our sincere service will satisfy all the clients. And our services are praised by our worthy customers who said that when they talked with us, they knew we are reliable and professional.

SCAIP Vce Test Simulator: https://www.itbrain.dumps.com/SCAIP_exam.html

Our Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam dumps are top-notch and designed to help students pass the Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) test on the first try. If you want to pass Saviynt SCAIP exam with the highest or 98% marks, then you should have got the Itbrain.dumps Saviynt SCAIP dumps. However, passing the SCAIP exam is the only way for anyone to get the IT certification, which is a big challenge for many people, Saviynt SCAIP Valid

Test Prep Do not waste your time.

He is currently pursuing a Ph.D, Creating a Standard Slicer, Our Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam dumps are top-notch and designed to help students pass the Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) test on the first try.

SCAIP - High Hit-Rate Saviynt Certified Advanced IGA Professional (Level 200) Valid Test Prep

If you want to pass Saviynt SCAIP exam with the highest or 98% marks, then you should have got the Itbraindumps Saviynt SCAIP dumps, However, passing the SCAIP exam is the only way for anyone to get the IT certification, which is a big challenge for many people.

Do not waste your time, We aim to build good SCAIP relationship with every customer by providing best service; we pay attention to word-of-mouth of our SCAIP practice exam, most of customers are recommended by their friends, colleagues or classmates.
