Salesforce Certified Sharing and Visibility Architect Sample Questions (Q10-Q15):

NEW QUESTION # 10

The sales manager in Japan have asked the sales manager in Australia to assist them with closing their deals. How are these requirements achieved?

- A. Use opportunity teams to automatically add the sales manager as a team member.
- B. Assign the sales manager View All on the opportunity object.
- **C. Create ownership-based sharing rule.**
- D. Use sharing set to give the sales manager access to the deals.

Answer: C

NEW QUESTION # 11

Universal Containers (UC) delivers training and courses to students and companies. UC is implementing a Salesforce Customer Community for its students granting them a Customer Community license. As part of the community requirements, UC asked to give students access to cases that are related to their account in the UC community.

What is the optimum sharing technique to achieve these requirements?

- **A. Create a sharing set to share cases with the students.**
- B. Use Apex sharing to share cases with the students.
- C. Create a sharing rule to share cases with the students.

Answer: A

Explanation:

For Customer Community licenses, the most optimal and Salesforce-recommended method to share cases with users is through a Sharing Set. Sharing Sets allow administrators to grant access to records associated with the user's account or contact, based on their profile and account relationship.

* Option A: Apex sharing could accomplish this, but it is unnecessary overhead and more complex compared to Sharing Sets, especially for straightforward account-related sharing.

* Option B: Sharing rules do not apply to community licenses such as Customer Community and are not an effective solution in this context.

* Option C (Correct): Sharing Sets provide a declarative solution to meet the requirement. By configuring a Sharing Set, UC can grant students access to cases linked to their account without needing custom code or complex configurations.

References:

* Sharing Sets for Communities

NEW QUESTION # 12

Universal Containers (UC) has a mostly Private organization-wide default, as it's a core principle of UC to respect client data privacy, UC has implemented complex processes for granting access to Opportunity data.

A few key members of the sales reporting team need to always be able to see, but not change, Opportunity data for all opportunities.

What should an architect recommend as an approach to meet these requirements?

- A. Create # permission set that grants the View All Data permission.
- **B. Create a permission set that grants the View All permission for Opportunity.**
- C. Give the View All Data permission to the Sales Reporting profile.

Answer: B

Explanation:

* View All Permission: Assigning the "View All" permission for the Opportunity object allows users to see all records of that object, regardless of sharing rules or ownership. This permission meets the need for key sales reporting team members to view Opportunity data without editing rights.

* Why Option C is Correct:

* A permission set is the preferred method for granting additional permissions to specific users without altering their profile.

* "View All" is more restrictive than "View All Data," providing access only to the Opportunity object and respecting the principle of minimal access.

* Why Others Are Incorrect:

* Option A: "View All Data" grants access to all objects and violates UC's privacy principles.

* Option B: While a permission set is correct, granting "View All Data" is overly permissive and unnecessary.

For detailed reference, see Salesforce permissions documentation: <https://help.salesforce.com/>

NEW QUESTION # 13

Which two capabilities does the delegated administrator permission provide?

Choose 2 answers

- **A. Unlock users**
- B. Set OWD
- **C. Assign users profiles**
- D. Create profiles

Answer: A,C

Explanation:

Explanation

Assigning users profiles and unlocking users are two capabilities that the delegated administrator permission provides. Delegated administrators are users who can perform certain administrative tasks on behalf of administrators. These tasks include assigning users to specified profiles or permission sets, creating and editing users in specified roles or groups, unlocking users who have exceeded their login attempts limit, resetting passwords for users in specified roles or groups, logging in as users who have granted login access to administrators. Option C is incorrect, since setting OWD is not a capability that delegated administrators have.

Option D is incorrect, since creating profiles is not a capability that delegated administrators have.

NEW QUESTION # 14

A Visualforce controller has a requirement to be written with "Without Sharing" at the top level; however, certain methods within the page still need to enforce the user permissions for creating records and accessing certain fields. Which two methods below would be used to enforce this requirements?

Choose 2 answers.

- **A. Schema.DescribeSObjectResult**
- B. UserInfo.getProfileID
- **C. Schema.DescribeFieldResult**
- D. Schema.getGlobalDescribe

Answer: A,C

Explanation:
