

2026 Confluent High Hit-Rate CCDAK: Valid Confluent Certified Developer for Apache Kafka Certification Examination Test Sample

2026 Latest Actual4Cert CCDAK PDF Dumps and CCDAK Exam Engine Free Share: <https://drive.google.com/open?id=1wewExEz4xZSMQOMzUkqKw5MoCwgl6741>

We offer free demos and updates if there are any for your reference beside real CCDAK real materials. By downloading the free demos you will catch on the basic essences of our CCDAK guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our CCDAK Exam Dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.

The CCDAK exam is a comprehensive test that covers various aspects of the Kafka platform, including Kafka architecture, configuration, monitoring, performance tuning, and security. CCDAK examination measures one's ability to use Kafka to handle real-time data feeds, messaging, and stream processing. CCDAK Exam is designed to assess one's understanding of the platform and their ability to apply their knowledge to solve real-world problems.

Confluent Certified Developer for Apache Kafka Certification Examination exam dumps & CCDAK practice torrent & Confluent Certified Developer for Apache Kafka Certification Examination training vces

Our product boosts many merits and high passing rate. Our products have 3 versions and we provide free update of the CCDAK exam torrent to you. If you are the old client you can enjoy the discounts. Most important of all, as long as we have compiled a new version of the CCDAK exam questions, we will send the latest version of our CCDAK Exam Questions to our customers for free during the whole year after purchasing. Our product can improve your stocks of knowledge and your abilities in some area and help you gain the success in your career.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q76-Q81):

NEW QUESTION # 76

When using plain JSON data with Connect, you see the following error
messageorg.apache.kafka.connect.errors.DataExceptionJsonDeserializer with schemas.enable requires "schema" and "payload"
fields and may not contain additional fields. How will you fix the error?

- A. Set key.converter, value.converter to JsonConverter and the schema registry url
- B. Use Single Message Transforms to add schema and payload fields in the message
- C. Set key.converter.schemas.enable and value.converter.schemas.enable to false
- D. Set key.converter, value.converter to AvroConverter and the schema registry url

Answer: C

Explanation:

You will need to set the schemas.enable parameters for the converter to false for plain text with no schema.

NEW QUESTION # 77

What are two examples of performance metrics?

(Select two.)

- A. total-login-attempts
- B. incoming-byte-rate
- C. Number of active user sessions
- D. Time of last failed login
- E. fetch-rate
- F. Number of active users

Answer: B,E

Explanation:

* fetch-rate: Measures how frequently consumers fetch data - critical for monitoring throughput.

* incoming-byte-rate: Shows how much data is being written to the broker per second - a key producer-side metric.

FromKafka JMX Metrics Guide:

"fetch-rate, incoming-byte-rate, request-latency are key performance metrics for producers and consumers."

* B, C, E, and F are application-layer business metrics, not Kafka performance metrics.

Reference:Kafka Monitoring > JMX Metrics

NEW QUESTION # 78

Your application is consuming from a topic configured with a deserializer.

It needs to be resilient to badly formatted records ("poison pills"). You surround the poll() call with a try/catch for RecordDeserializationException.

You need to log the bad record, skip it, and continue processing.

Which action should you take in the catch block?

- A. Throw a runtime exception to trigger a restart of the application.
- B. Log the bad record and call the consumer.skip() method.
- C. Log the bad record, no other action needed.
- D. Log the bad record and seek the consumer to the offset of the next record.

Answer: D

Explanation:

To skip a corrupted record and avoid failing the application, you must seek past the failed offset manually using consumer.seek(). This allows the application to resume consumption from the next offset.

FromKafka Consumer Error Handling Docs:

"On deserialization failure, you can catch RecordDeserializationException, log the error, and call seek() to the next offset to skip the bad record."

* A does not prevent re-processing the bad record.

* C is invalid; there's no skip() method in the Kafka consumer API.

* D results in service interruption - not ideal for resiliency.

Reference:Kafka Consumer API - Exception Handling and seek()

NEW QUESTION # 79

You are building a consumer application that processes events from a Kafka topic. What is the most important metric to monitor to ensure real-time processing?

- A. records-lag-max
- B. BytesInPerSec
- C. MessagesInPerSec
- D. UnderReplicatedPartitions

Answer: A

Explanation:

This metric shows the current lag (number of messages behind the broker)

NEW QUESTION # 80

Which KSQL queries write to Kafka?

- A. CREATE STREAM AS SELECT and CREATE TABLE AS SELECT
- B. COUNT and JOIN
- C. CREATE STREAM WITH <topic> and CREATE TABLE WITH <topic>
- D. SHOW STREAMS and EXPLAIN <query> statements

Answer: A,C

Explanation:

SHOW STREAMS and EXPLAIN <query> statements run against the KSQL server that the KSQL client is connected to. They don't communicate directly with Kafka. CREATE STREAM WITH <topic> and CREATE TABLE WITH <topic> write metadata to the KSQL command topic. Persistent queries based on CREATE STREAM AS SELECT and CREATE TABLE AS SELECT read and write to Kafka topics.

Non-persistent queries based on SELECT that are stateless only read from Kafka topics, for example:

```
SELECT A FROM foo WHERE A;
```

Non-persistent queries that are stateful read and write to Kafka, for example, COUNT and JOIN. The data in Kafka is deleted automatically when you terminate the query with CTRL-C.

NEW QUESTION # 81

.....

Our desktop-based Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) practice exam software needs no internet connection. The web-based Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) practice exam is similar to the desktop-based software. You can take the web-based Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) practice exam on any browser without needing to install separate software. In addition, all operating systems also support this web-based Confluent CCDAK Practice Exam. Both Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) practice exams track your performance and help to overcome mistakes. Furthermore, you can customize your Building Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) practice exams according to your needs.
