Real4Prep 101-500 Exam Dumps will not only help you pass in one attempt, but also save your valuable time.

## Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q68-Q73):

### NEW QUESTION # 68

Which of the following commands replaces each occurrence of 'bob' in the file letter with 'Bob' and writes the result to the file newletter?

- A. sed s/bob/Bob/ letter < newletter
- B. sed '/bob/Bob' letter > newletter
- C. sed 's/bob, Bob/' letter > newletter
- D. sed 's/bob/Bob/g' letter > newletter
- E. sed 's/bob/Bob' letter > newletter

**Answer: D**

### NEW QUESTION # 69

Which of the following file permissions belong to a symbolic link?

- A. lrwxrwxrwx
- B. srwxrwxrwx
- C. +rwxrwxrwx
- D. -rwxrwxrwx

**Answer: A**

Explanation:

The correct file permissions that belong to a symbolic link are lrwxrwxrwx. This is because a symbolic link is a special file that points to another file or directory. The first character of the file permissions indicates the file type. The letter l means that the file is a symbolic link. The other letters r, w, and x represent the read, write, and execute permissions for the owner, group, and others classes. However, the permissions of the symbolic link are not used for accessing the file or directory that it points to. The permissions of the target file or directory are used instead. Therefore, the permissions of the symbolic link are usually set to rwx for all classes, meaning that anyone can read, write, or execute the link. The other options are incorrect because they do not indicate the file type of a symbolic link. Option A is wrong because the first character - means that the file is a regular file, not a symbolic link. Option B is wrong because the first character + is not a valid file type indicator. Option D is wrong because the first character s means that the file is a socket, not a symbolic link.

### NEW QUESTION # 70

Which of the following tools can show the complete path of an executable file that the current shell would execute when starting a command without specifying its complete path? (Choose two.) find

- A. pwd
- B. which
- C.
- D. locate
- E. type

**Answer: C,D**

### NEW QUESTION # 71

What command will remove duplicate lines from a sorted file?

- A. filter
- B. trim
- C. uniq
- D. wc

**Answer: C**

### NEW QUESTION # 72

Which of the following commands will send output from the program myapp to both standard output (stdout) and the file file1.log?

- A. tee myapp file1.log
- B. cat < myapp | cat > file1.log
- C. myapp | cat > file1.log
- D. myapp 0>&1 | cat > file1.log

- E. `myapp | tee file1.log`

**Answer: E**

Explanation:

The tee command reads from standard input and writes to both standard output and one or more files.

Therefore, the command `myapp | tee file1.log` will send the output of the program `myapp` to both the terminal and the file `file1.log`.

The other commands will either fail to write to both standard output and file, or write the wrong output. For example, the command `cat < myapp | cat > file1.log` will try to read the file `myapp` as input and write it to the file `file1.log`, but it will not display anything on the terminal. The command `myapp 0>&1 | cat > file1.log` will redirect the standard input of `myapp` to its standard output, and then pipe it to the file `file1`.

`log`, but it will not display anything on the terminal. The command `myapp | cat > file1.log` will pipe the output of `myapp` to the file `file1.log`, but it will not display anything on the terminal. The command `tee myapp file1`.

`log` will try to read from standard input and write to both the file `myapp` and the file `file1.log`, but it will not execute the program `myapp`. References:
