

Trusting Reliable Latest F5CAB3 Braindumps Pdf Is The Quickest Way to Pass BIG-IP Administration Data Plane Configuration

What's more, part of that Actual4Cert F5CAB3 dumps now are free: https://drive.google.com/open?id=1nEfd21tx2lZkeT0px5Sg7HxTW8_IU4id

Actual4Cert F5 F5CAB3 Dumps are validated by many more candidates, which can guarantee a high success rate. After you use our dumps, you still fail the exam so that Actual4Cert will give you FULL REFUND. Or you can choose to free update your exam dumps. With such protections, you don't need to worry.

F5 F5CAB3 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Apply procedural concepts required to modify and manage pools: This domain addresses managing server pools including health monitors, load balancing methods, priority groups, and service port configurations.
Topic 2	<ul style="list-style-type: none">Apply procedural concepts required to modify and manage virtual servers: This domain covers managing virtual servers including applying persistence, encryption, and protocol profiles, identifying iApp objects, reporting iRules, and showing pool configurations.

F5CAB3 Latest Test Camp & Latest F5CAB3 Exam Objectives

Our F5CAB3 learning questions are always the latest and valid to our loyal customers. We believe this is a basic premise for a company to continue its long-term development. The user passes the F5CAB3 exam and our market opens. This is a win-win situation. Or, you can use your friend to find a user who has used our F5CAB3 Guide quiz. In fact, our F5CAB3 study materials are very popular among the candidates. And more and more candidates are introduced by their friends or classmates.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q72-Q77):

NEW QUESTION # 72

A BIG-IP Administrator uses backend servers to host multiple services per server. There are multiple virtual servers and pools defined, referencing the same backend servers.

Which load balancing algorithm is most appropriate to have an equal number of connections on each backend server?

- A. Least Connections (node)
- B. Predictive (node)
- C. Predictive (member)
- D. Least Connections (member)

Answer: A

Explanation:

Least Connections (node) balances connections across the physical server regardless of how many services or pool members exist on that node.

NEW QUESTION # 73

Some users who connect to a busy Virtual Server have connections reset by the BIG-IP system. Pool member resources are NOT a factor.

What is a possible cause?

- A. Connection Rate Limit is set too high
- B. Server SSL profile not reconfigured
- C. Connection Limit is set too low
- D. Rewrite profile not configured

Answer: C

Explanation:

When the connection limit is reached, BIG-IP resets new connections, even if pool members are healthy.

NEW QUESTION # 74

A node is a member of multiple pools hosting different web applications. If one application fails, only that pool member should be marked down.

What should be configured?

- A. ICMP + TCP monitor
- B. UDP monitor
- C. TCP monitor
- D. HTTP monitor with custom send/receive

Answer: D

Explanation:

Application-specific health checks must validate application responses, which requires HTTP monitors with custom send/receive strings.

NEW QUESTION # 75

A Standard Virtual Server is configured with SNAT Automap. Backend servers must see the original client IP.

What should be configured?

- A. Performance (HTTP) VS
- B. HTTP Transparent profile
- C. HTTP profile with X-Forwarded-For
- D. SNAT pool with client IP

Answer: C

Explanation:

X-Forwarded-For inserts the original client IP into HTTP headers, preserving client identity while SNAT is enabled.

NEW QUESTION # 76

A BIG-IP Administrator finds the following log entry: tmm tmm[714]: 011e0002:4: sweeper_update: aggressive mode activated. Which action should the BIG-IP administrator take to mitigate this memory issue?

- A. Configure the redundant pair to be active-active
- B. Configure the virtual server to use Connection Mirroring
