Providing You Excellent 100-160 Examcollection Vce with 100% Passing Guarantee

You can access our web-based Cisco Certified Support Technician (CCST) Cybersecurity (100-160) practice exam from anywhere with an internet connection, and fit your studying into your busy schedule. No more traveling to a physical classroom, wasting time and money on gas or public transportation. With the web-based Cisco 100-160 Practice Test, you can evaluate and enhance your progress. Customizable web-based mock exam creates a real Cisco Certified Support Technician (CCST) Cybersecurity (100-160) exam environment and works on all operating systems.

Cisco 100-160 Exam Syllabus Topics:

Topic	Details

Topic 1	• Incident Handling: This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.
Topic 2	• Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems
Topic 3	• Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.
Topic 4	• Endpoint Security Concepts:This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.
Topic 5	• Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection • prevention systems, providing insight into how threats are mitigated within network environments.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q321-Q326):

NEW QUESTION # 321
Which encryption method uses a single key to both encrypt and decrypt data?

- A. Symmetric encryption
- B. Hashing
- C. SSL/TLS
- D. Asymmetric encryption

Answer: A

Explanation:
Symmetric encryption uses a single key to both encrypt and decrypt data. This means that the same key is used by both the sender and the receiver to secure the communication. It is faster and less computationally intensive than asymmetric encryption.

NEW QUESTION # 322
What is smishing?

- A. A cyber attack where an attacker manipulates and deceives an individual to reveal sensitive information.
- B. A physical attack where an unauthorized person gains entry to a restricted area by following closely behind an authorized person.
- C. A type of phishing attack that targets specific individuals or organizations.
- D. A form of social engineering attack that uses SMS or text messages to trick victims into revealing sensitive information.

Answer: D

Explanation:
Smishing, short for SMS phishing, is a social engineering attack that utilizes SMS or text messages to deceive individuals into disclosing sensitive information or performing certain actions. These messages often mimic legitimate sources, such as banks or service providers, and typically contain links or phone numbers that, when accessed or called, lead to malicious activities. Smishing takes advantage of the ubiquity of mobile devices and users' tendency to trust text messages.

NEW QUESTION # 323
Which compliance framework is primarily concerned with securing payment card data and ensuring it is protected against unauthorized access?

- A. HIPAA
- B. FERPA
- C. PCI-DSS
- D. GDPR

Answer: C

Explanation:
The Payment Card Industry Data Security Standard (PCI-DSS) is a compliance framework developed by the major credit card companies to safeguard payment card data and prevent fraud. It provides guidelines, requirements, and best practices for organizations that handle cardholder information, ensuring that it is stored, processed, and transmitted securely.

NEW QUESTION # 324
Which of the following is the primary objective of vulnerability assessment in cybersecurity?

- A. To evaluate the effectiveness of existing security controls.
- B. To determine the likelihood of a vulnerability being exploited.
- C. To assess the impact of identified vulnerabilities on the system.
- D. To identify and remove all vulnerabilities from a system.

Answer: B

Explanation:
The primary objective of vulnerability assessment is to determine the probability of a vulnerability being exploited. It involves identifying and prioritizing vulnerabilities, so resources can be allocated to fix the most critical ones first.

NEW QUESTION # 325
You are reviewing the Application log on a Windows computer. You see an event with an error-level message as shown. What can you determine about the application that generated the event message?
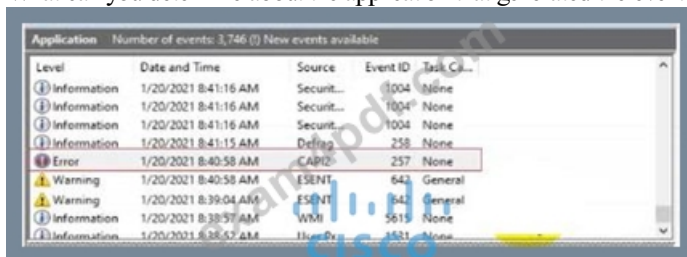

- A. The application is currently running much slower than expected.
- B. The application loaded and ran successfully without issues.
- C. The application experienced a significant problem that caused it to fail.
- D. The application recovered from an event without loss of functionality.

Answer: C

Explanation:
In the CCST Cybersecurity course, Windows Event Viewer Error events in the Application log indicate a severe problem that caused an application or component to fail. This usually requires investigation or repair.
"Error events indicate a significant problem such as a loss of functionality in an application or system component. Errors are often critical and need immediate attention." (CCST Cybersecurity, Incident Handling, Event Logging and Analysis section, Cisco Networking Academy) A is incorrect: Performance slowness would usually generate warnings, not errors.
B is correct: An "Error" level in Event Viewer means the application failed in some way.
C is incorrect: That describes an "Information" event, not an error.
D is incorrect: That also corresponds to an "Information" event.

NEW QUESTION # 326

......

The 100-160 exam dumps are real and updated 100-160 exam questions that are verified by subject matter experts. They work closely and check all 100-160 exam dumps one by one. They maintain and ensure the top standard of Exam4PDF Cisco Certified Support Technician (CCST) Cybersecurity (100-160) exam questions all the time. The 100-160 practice test is being offered in three different formats. These 100-160 exam questions formats are PDF dumps files, web-based practice test software, and desktop practice test software.
