And our Plat-Admn-301 training questions are popular in the market. We believe you will make the right choice.

Salesforce Certified Platform Administrator II Sample Questions (Q120-Q125):

NEW QUESTION # 120

An administrator at Cloud kicks recently built a screen flow in a sandbox that creates a case and follow-up task. When the flow runs in the sandbox, it works just as expected. When tested in production, the flow errors when creating the records.
Choose 2 answers

- A. Log in as another user and run the flow.
- B. Change the Default Case Creator to the user's manager.
- C. Change the user experiencing the issue to the System Administrator profile.
- D. Open the flow In Debug mode and Run the Flow as another user.

Answer: A,D

Explanation:
Opening the flow in Debug mode and running it as another user allows simulating how the flow behaves for different users with different permissions and settings. This can help identify any issues related to user

NEW QUESTION # 121

Cloud Kicks has two record-triggered flows on the same object. One flow creates a child record when criteria are met. The second record-triggered flow is based on criteria to check if the child record exists and updates a field. The field on the child record that needs to be updated Is still null after the second record trigger.
What should the administrator do to resolve this issue?

- A. Combine the two flows into one with checks to see which part of the flow needs to be run.
- B. flows into schedule flows and have them update the field.
- C. Make a new record-triggered flow on the child object to update the field on the parent record.
- D. Have the record-triggered flows fire on create or edit to update the field.

Answer: A

Explanation:
Flows are tools that automate business processes by collecting data and performing actions in your org or an external system. Flows can be triggered by various events such as record creation, updates, or invocations from other processes or flows. Flows can also have decision elements that evaluate conditions and determine which path to follow in the flow. By combining the two flows into one with decision elements, the administrator can ensure that the flow runs in the correct order and updates the field on the child record after it is created by the first flow. NEW QUESTION # 122

AW Computing uses a custom Invoice object to track invoices related to accounts. The administrator wants to use roll-up summary fields to view high-level information at a glance on the account record.
Which two considerations should an administrator remember about roll-up summary fields?
Choose 2 answers

- A. Rollup fields are calculated prior to save.
- B. Roll-up summary fields are created on the master side of a master-detail relationship.
- C. Roll-up types include COUNT, SUM, and AVG.
- D. Roll-up summary fields prevent the conversion of a master-detail relationship to a lookup.

Answer: B,C

Explanation:
Two considerations that the administrator should remember about roll-up summary fields are:
* Roll-up types include COUNT, SUM, and AVG. A roll-up type is a function that determines how the data from the child records is aggregated and displayed on the parent record. The available roll-up types are COUNT, which counts the number of child records; SUM, which adds up the values of a numeric field on the child records; AVG, which calculates the average value of a numeric field on the child records; MIN, which displays the lowest value of a field on the child records; and MAX, which displays the highest value of a field on the child records.
* Roll-up summary fields are created on the master side of a master-detail relationship. A master-detail relationship is a type of relationship that links two objects together such that the master object controls certain behaviors of the detail object, such as security

and deletion. A roll-up summary field is a type of field that displays a value that is calculated from child records related to a parent record. Roll-up summary fields can only be created on the master object of a master-detail relationship or on a lookup relationship if it is set as required.

The other two options are incorrect because:

* Roll-up summary fields do not prevent the conversion of a master-detail relationship to a lookup. They only prevent it if they reference a formula field that includes another relationship.

* Rollup fields are not calculated prior to save. They are calculated after save and may take some time to update.

References: https://help.salesforce.com/s/articleView?id=sf.customize_rollup_summary_fields.htm&type=5

NEW QUESTION # 123

Dreamhouse Realty has created a custom object to track its Open Houses with a master-detail relationship up to a custom object for Properties. Agents need to quickly calculate the number of Open House records in a status or Pending so they can see the value from the Property record.

What feature should the administrator implement?

- A. Lightning Component
- B. visualforce Page
- C. Roll-Up Summary
- D. Formula Fields

Answer: C

Explanation:

A roll-up summary field is used to display a value in a master record based on the values of a set of related detail records. In this case, the administrator can create a roll-up summary field on the Properties object that counts the number of Open House records in a Pending status. References: https://help.salesforce.com/s /articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5

NEW QUESTION # 124

An administrator is Informed that an employee has Just resigned and needs all access removed Immediately.

This user is the owner of 4,000 records and the sole recipient or 57 email alerts. Management will need at least a month to find a replacement. The email administrator has already revoked their email access.

What action should be taken to ensure the user's access is immediately revoked?

- A. Go into the user record and freeze the user.
- B. Go into the user record and delete the user,
- C. Go into the user record and uncheck the Lightning User checkbox.
- D. Go into the user record and set the login hours to None'.

Answer: A

Explanation:

Go into the user record and freeze the user is the action that should be taken to ensure the user's access is immediately revoked. Freezing a user is a way to temporarily prevent a user from logging in to Salesforce without deactivating their user record or changing their profile. Freezing a user can be useful when an employee has resigned or left the company and their access needs to be removed immediately. Freezing a user does not affect the ownership of records or email alerts that are assigned to them

NEW QUESTION # 125

......

And if you are one of the numerous members who use our Plat-Admn-301 study guide, there are equally lots of services such as free update and some other discounts, With the drawing near of the examination, I still lack of confidence to pass Plat-Admn-301 test, Salesforce Latest Plat-Admn-301 Braindumps Sheet So come on boy, don't waste time again, They thoroughly analyze Plat-Admn-301 Salesforce Certified Platform Administrator II exam's content, Salesforce Plat-Admn-301 past tests, and add the Plat-Admn-301 real exam questions in our three formats.
