CompTIA Network+ Certification Exam Sample Questions (Q126-Q131):

NEW QUESTION # 126
Which of the following best explains the role of confidentiality with regard to data at rest?

- A. Data can be accessed by anyone on the administrative network.
- B. Data can be accessed after privileged access Is granted.
- C. Data can be accessed remotely with proper training.
- D. Data can be accessed after verifying the hash.

Answer: B

Explanation:
* Confidentiality with Data at Rest: Confidentiality is a core principle of data security, ensuring that data stored (at rest) is only accessible to authorized individuals. This protection is achieved through mechanisms such as encryption, access controls, and permissions.
* Privileged Access: The statement "Data can be accessed after privileged access is granted" aligns with the confidentiality principle, as it restricts data access to users who have been granted specific permissions or roles. Only those with the appropriate credentials or permissions can access the data.
* Incorrect Options:
* A. "Data can be accessed by anyone on the administrative network." This violates the principle of confidentiality by allowing unrestricted access.
* B. "Data can be accessed remotely with proper training." This focuses on remote access rather than restricting access based on privileges.
* D. "Data can be accessed after verifying the hash." This option relates more to data integrity rather than confidentiality.

NEW QUESTION # 127
Which of the following is most likely responsible for the security and handling of personal data in Europe?

- A. SAML
- B. PCI DSS
- C. GDPR
- D. SCADA

Answer: C

Explanation:
* Definition of GDPR:

* General Data Protection Regulation (GDPR)is a regulation in EU law on data protection and privacy for all individuals within the European Union and the European Economic Area. It also addresses the transfer of personal data outside the EU and EEA areas.
* Scope and Objectives:
* GDPR aims to give individuals control over their personal data and to simplify the regulatory environment for international business by unifying the regulation within the EU.
* It enforces rules about data protection, requiring companies to protect the personal data and privacy of EU citizens for transactions that occur within EU member states.
* Comparison with Other Options:
* SCADA (Supervisory Control and Data Acquisition):Refers to control systems used in industrial and infrastructure processes, not related to personal data protection.
* SAML (Security Assertion Markup Language):A standard for exchanging authentication and authorization data between parties, not specifically for personal data protection.
* PCI DSS (Payment Card Industry Data Security Standard):A set of security standards designed to ensure that all companies that accept, process, store or transmit credit card information maintain a secure environment, not specific to personal data protection in Europe.
* Key Provisions:
* GDPR includes provisions for data processing, data subject rights, obligations of data controllers and processors, and penalties for non-compliance.

NEW QUESTION # 128

A storage network requires reduced overhead and increased efficiency for the amout of data being sent.
Which of the following should an engineer likely configure to meet these requirements>?

* A. Link speed
* B. QoS
* C. 802.1q tagging
* D. Jumbo frames

Answer: D

Explanation:
Jumbo frames are Ethernet frames with a payload greater than the standard maximum transmission unit (MTU) of 1500 bytes. Configuring jumbo frames can reduce overhead and increase efficiency in storage networks by allowing more data to be sent in each frame, thus reducing the number of frames needed to transmit the same amount of data.
* Reduced Overhead: By sending larger frames, the relative overhead for headers and acknowledgments is reduced.
* Increased Efficiency: Larger frames mean fewer packets to process, leading to better utilization of network bandwidth and improved performance in high-throughput environments like storage networks.
* Configuration: Requires support from all devices in the network path, including switches and network interface cards (NICs).
Network References:
* CompTIA Network+ N10-007 Official Certification Guide: Explains jumbo frames and their benefits in reducing network overhead.
* Cisco Networking Academy: Provides training on network optimization techniques, including the use of jumbo frames.
* Network+ Certification All-in-One Exam Guide: Covers advanced Ethernet features, including jumbo frames and their configuration for improved network performance.

NEW QUESTION # 129

Which of the following is the most likely reason an insurance brokerage would enforce VPN usage?

* A. To secure the endpoint
* B. To maintain contractual agreements
* C. To comply with data retentin requirements
* D. To encrypt sensitive data in transit

Answer: D

Explanation:
The most likely reason an insurance brokerage would enforce VPN usage is to encrypt sensitive data in transit.

VPNs (Virtual Private Networks) create a secure tunnel between the user's device and the corporate network, ensuring that data is encrypted and protected from interception.
* Encryption: VPNs encrypt data, preventing unauthorized access and ensuring data privacy during transmission over public or unsecured networks.
* Data Protection: Essential for industries handling sensitive information, such as insurance brokerages, to protect customer data and comply with regulatory requirements.
* Security: Enhances overall network security by providing secure remote access for employees.
Network References:
* CompTIA Network+ N10-007 Official Certification Guide: Discusses the role of VPNs in securing data in transit.
* Cisco Networking Academy: Provides training on VPN technologies and their importance in data security.
* Network+ Certification All-in-One Exam Guide: Explains VPN usage and its benefits in protecting sensitive information.

NEW QUESTION # 130

A technician is planning an equipement installation into a rack in a data center that practices hot aisle/cold aise ventilation. Which of the following directions should the equipement exhaust face when installed in the rack?

- A. Sides
- B. Front
- C. Rear
- D. Top

Answer: C

Explanation:
In a data center that practices hot aisle/cold aisle ventilation, equipment should be installed so that the exhaust faces the rear of the rack. This setup ensures that hot air is expelled into the hot aisle, maintaining proper airflow and cooling efficiency.
Hot Aisle/Cold Aisle Configuration: Equipment intake should face the cold aisle where cool air is supplied, and exhaust should face the hot aisle where hot air is expelled.
Cooling Efficiency: Proper orientation of equipment helps maintain an efficient cooling environment by segregating hot and cold air, preventing overheating and improving energy efficiency.
