

Pass Guaranteed Quiz 2026 ZDTA - Zscaler Digital Transformation Administrator Exam Preview

BTW, DOWNLOAD part of PassTestking ZDTA dumps from Cloud Storage: <https://drive.google.com/open?id=1jmZAZ8HDYR5N2-Mo3SbDa0-eJgTSkaA>

Three versions for ZDTA training materials are available, you can choose one you like according to your own needs. All three versions have free demo for you to have a try. ZDTA PDF version is printable and you can learn them anytime and anyplace. ZDTA Soft test engine can stimulate the real exam environment, so that you can know the procedures for the exam, and your confidence for ZDTA Exam Materials will also be improved. ZDTA Online test engine is convenient and easy to learn, it has testing history and performance review, and you can have a general review of what you have learned by this version.

Zscaler ZDTA Exam Syllabus Topics:

Section	Objectives
Topic 1: Access Control Services	- Application Segmentation - User Access Policies - Firewall Policies
Topic 2: Digital Experience	- User Experience Analytics - ZDX Monitoring

Topic 3: Zero Trust Exchange Overview	- Secure Private Application Access - Secure Internet and SaaS Access - Digital Experience Monitoring - Why Digital Transformation Needed
Topic 4: Cyberthreat Protection Services	- Web Security Policies - Threat Prevention - Advanced Threat Protection
Topic 5: Basic Data Protection Services	- Data Loss Prevention - Inline Data Protection
Topic 6: Identity Services	- SCIM Configuration - Identity Provider Integration - SAML Authentication
Topic 7: Risk Management	- Risk Visibility - Security Monitoring
Topic 8: Connectivity Services	- App Connector Deployment - Traffic Forwarding - Zscaler Client Connector
Topic 9: Platform Services	- SSL and TLS Inspection - Platform Configuration - Policy Framework

Top Features of PassTestking Zscaler ZDTA Practice Test Software

Wondering where you can find the perfect materials for the exam? Don't leave your fate depending on thick books about the ZDTA exam. Our authoritative ZDTA study materials are licensed products. Whether newbie or experienced exam candidates you will be eager to have our ZDTA Exam Questions. And they all made huge advancement after using them. Not only that you will get the certification, but also you will have more chances to get higher incomes and better career.

Zscaler Digital Transformation Administrator Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which of the following is unrelated to the properties of "Trusted Networks"?

- **A. Org ID**
- B. Network Range
- C. Default Gateway
- D. DNS Server

Answer: A

Explanation:

Trusted Network Detection uses network-observable criteria such as DNS server, DNS search domain, gateway, and network ranges to determine whether the endpoint is on a corporate network. An Org ID is tenant identity, not a network characteristic visible on the endpoint. Option C (Org ID) is correct because Org ID is unrelated to trusted-network properties.

Why the other options are incorrect:

A). DNS Server: DNS Server criteria identify a trusted network by checking whether the endpoint sees expected internal resolver addresses.

B). Default Gateway: Default Gateway can identify a local network path, but it is not always one of the exact trusted-network criteria set in this item.

D). Network Range: Network range can describe local addressing, but the tested Trusted Network property set is based on the exact ZCC detection fields in the question.

NEW QUESTION # 78

Architecture reviews reveal trusted network bypass is configured for headquarters, while roaming users route through the service edge. The goal is stricter controls for accessing SaaS application when off-network traffic.

What policy ensures the best coverage for this scenario?

- A. Leverage conditional access policies to ensure client sessions only come from known location or via the Zero Trust Exchange
- B. ZPA App Segment policies that constrain ports for legacy private applications accessed by remote users
- C. CASB app governance policies that rely on user risk scores to restrict cloud activities across all locations
- D. Data center firewall tiers that mirror internal VLANs and apply deny rules for roaming identities

Answer: A

Explanation:

Answer B is correct. The protected resources are SaaS applications, and the requirement distinguishes headquarters traffic from roaming traffic. Conditional Access can recognize an approved source location or require the SaaS session to arrive through the Zscaler-controlled path. Zscaler documents source IP anchoring for Microsoft 365 Conditional Access, which associates cloud-application traffic with a trusted location, and its Identity Proxy can force supported cloud application sessions through the Zscaler Service Edge. This gives the SaaS provider a dependable access signal while ZIA applies inspection and policy to off-network traffic.

ZPA App Segments control private applications, not general SaaS access. Risk-only CASB governance does not establish the required network path, and data-center VLAN firewalls cannot reliably govern roaming users connecting directly to cloud services. See Zscaler's Conditional Access source-IP anchoring and Identity Proxy configuration.

NEW QUESTION # 79

Zscaler Data Protection supports custom dictionaries. What actions can administrators take with these dictionaries to protect data in motion?

- A. Define specific governance and regulations relevant to their organization's sensitive data policy.
- B. Define specific keywords, phrases, or patterns relevant to their organization's sensitive data policy.
- C. Define specific SaaS tenant relevant to their organization's sensitive data policy
- D. Define specific file types relevant to their organization's sensitive data policy.

Answer: B

Explanation:

Custom DLP dictionaries let administrators define the exact business-specific content that should be treated as sensitive. They can include keywords, phrases, patterns, and regex expressions that match regulated data, internal identifiers, or proprietary terms. Option A (Define specific keywords, phrases, or patterns relevant to their organization's sensitive data policy) is correct because those dictionary entries are what Zscaler uses to detect data in motion.

Why the other options are incorrect:

B). Define specific governance and regulations relevant to their organization's sensitive data policy:

Governance and regulatory labels help describe policy intent. A custom dictionary needs the actual sensitive- data tokens: keywords, phrases, or patterns.

C). Define specific SaaS tenant relevant to their organization's sensitive data policy: A SaaS tenant value controls which tenant or instance users may access. Custom dictionaries define content patterns, not tenant boundaries.

D). Define specific file types relevant to their organization's sensitive data policy: File type definitions classify files such as executables or archives. Custom DLP dictionaries define sensitive words, phrases, regexes, or identifiers.

NEW QUESTION # 80

Which SaaS platform is supported by Zscaler's SaaS Security Posture Management (SSPM)?

- A. Amazon S3
- B. Webex Teams
- C. Dropbox
- D. Google Workspace

Answer: D

Explanation:

Zscaler SaaS Security Posture Management evaluates supported SaaS platforms for risky configurations, posture gaps, and compliance issues. Google Workspace is one of the supported SaaS environments for posture assessment, whereas storage or

collaboration tools in the other choices do not match this SSPM support item. Option D (Google Workspace) is correct because Google Workspace is the supported SaaS platform in this question.

Why the other options are incorrect:

- A). Amazon S3: Amazon S3 is cloud object storage, not the SaaS collaboration suite named by the tested SSPM support item.
- B). Webex Teams: Webex Teams is a collaboration app. The question's intended application/control is not Webex Teams.
- C). Dropbox: Dropbox is cloud storage. It is a common SaaS destination, but it is not the application identified by the scenario's correct answer.

NEW QUESTION # 81

Which proprietary technology does Zscaler use to calculate risk attributes dynamically for websites?

- A. Third-Party Sandbox
- B. Browser Isolation Feedback Form
- C. Zscaler PageRisk
- D. Deception Controller

Answer: C

Explanation:

Zscaler PageRisk, specifically the Page Risk Index, is the proprietary scoring capability used in ZIA to evaluate the risk of web pages dynamically. Instead of relying only on static URL blocklists, PageRisk uses a multi-data algorithm that considers page content and domain characteristics. Page-content signals include risky scripts, suspicious iFrames, XSS indicators, vulnerable controls, and other active content. Domain signals include reputation, hosting location, age, and relationships to risky top-level domains. The verified answer is Option B (Zscaler PageRisk) because PageRisk is the Zscaler technology used for real-time website risk scoring. Why the other options are incorrect:

- A). Third-Party Sandbox: A sandbox detonates files to observe malicious behavior. PageRisk is a web-page/domain scoring engine, and Zscaler uses native sandboxing rather than a third-party PageRisk service.
- C). Browser Isolation Feedback Form: Browser Isolation renders risky pages remotely to protect the endpoint. A feedback form would collect input; it would not calculate real-time web risk.
- D). Deception Controller: The Deception controller manages decoys, lures, and honeypots for intruder detection. It is about lateral-movement detection, not public website scoring.

NEW QUESTION # 82

.....

Our company is a professional certificate exam materials provider. We have occupied in the field for years, therefore we have rich experiences. ZDTA learning materials of us are high-quality, and we receive many good feedbacks from our customers, and they think highly of the ZDTA Exam Dumps. In order to serve you better, we have online and offline chat service, you can ask any questions about the ZDTA learning materials. Besides, we provide you with free update for one year after purchasing.
