If candidates are going to buy Analytics-DA-201 test dumps, they may consider the problem of the fund safety. If you are thinking the same question like this, our company will eradicate your worries. We choose the international third party to ensure the safety of the fund. The Analytics-DA-201 Test Dumps are effective and conclusive, you just need to use the least time to pass it. If you choose us, it means you choose the pass.

### Salesforce Certified Tableau Data Analyst Sample Questions (Q12-Q17):

#### NEW QUESTION # 12

Open the link to Book1 found on the desktop. Open the sales dashboard.  
Add the Sales by State sheet in a Show/Hide button to the right side of the dashboard.

#### Answer:

Explanation:

check the steps below in explanation.

Explanation:

To add the Sales by State sheet in a Show/Hide button to the right side of the dashboard, you need to do the following steps:

- \* Open the link to Book1 found on the desktop. This will open the Tableau workbook that contains the sales dashboard.
- \* Click on the sales dashboard tab at the bottom of the workbook to open the dashboard. You will see a dashboard that shows various charts and filters related to sales data.
- \* Drag Sales by State from the Sheets pane to the right side of the dashboard. This will add the sheet as a floating element on the dashboard. You can resize and position it as you like.
- \* Right-click on Sales by State and select Add Show/Hide Button from the menu. This will add a button that allows you to show or hide the sheet on the dashboard. You can customize the appearance and behavior of the button by clicking on it and using the options on the Marks card.
- \* Optionally, you can drag a vertical layout container from the Objects pane to the right side of the dashboard and place Sales by State and its button inside it. This will help you organize your dashboard elements and align them neatly.

#### NEW QUESTION # 13

When should a Data Analyst use a Treemap in Tableau?

- A. To visualize the change in a measure across different regions in a map
- B. To show the correlation between two continuous variables
- C. To analyze the distribution of a measure over time
- **D. To display hierarchical data with nested categories**

#### Answer: D

#### NEW QUESTION # 14

You have a data set that contains three columns named Sales, Profit, and Quantity.  
You need to build the following scatter plot.

□

**Answer:**

Explanation:

□ Explanation:

To build the scatter plot shown in the image, you need to place the Profit measure on the Rows shelf and the Sales measure on the Columns shelf. This will create a Cartesian chart with Profit as the y-axis and Sales as the x-axis. Then, you need to change the mark type to Circle on the Marks card. This will display the data points as circles that vary in size according to the Quantity measure. You can also add color or shape encoding to the marks to show additional dimensions or measures in the view. References:

**NEW QUESTION # 15**

You have the following dashboard that contains two visualizations.

□ You want to show only one visualization at time. Users must be able to switch between visualizations.

What should you me?

- A. A parameter and a calculated filed
- B. Dashboard actions
- **C. Show/hide buttons**
- D. Worksheet actions

**Answer: C**

Explanation:

In Tableau, you can manage the visibility of different visualizations on a dashboard using various techniques.

Among the options provided, the most straightforward method to allow users to switch between two visualizations is to use show/hide buttons.

Here's why each option is or isn't suitable for the requirement:

A). A parameter and a calculated field: While it's possible to use a parameter and a calculated field to control which visualization is displayed, it requires creating a calculated field that responds to a parameter and then using that field to filter the view. This method can become complex and is not as user-friendly for simply showing and hiding visualizations.

B). Worksheet actions: Worksheet actions in Tableau typically allow users to interact with the data within a visualization, such as filtering data or highlighting related data points when clicking or hovering. They are not designed to control the visibility of entire visualizations on a dashboard.

C). Show/hide buttons: Show/hide buttons are a feature specifically designed to manage the visibility of dashboard elements. When you create a show/hide button, it can be configured to display or hide a particular visualization, container, or any other dashboard element when clicked. This provides a very intuitive interface for users to switch between visualizations.

D). Dashboard actions: Dashboard actions, like worksheet actions, are used to create interactions between sheets, such as filtering data or navigating to other sheets or URLs based on user interactions. They are not intended for toggling the visibility of visualizations.

Therefore, the correct answer is C. Show/hide buttons as they provide a user-friendly way to switch between visualizations on a dashboard without the need for complex calculations or actions that aren't meant for this purpose. The show/hide button feature is specifically designed for toggling visibility and offers a simple and effective solution for the requirement.

**NEW QUESTION # 16**

You want to create the following table in a view.

□ Which function should you use to create the Position column?

- **A. FIRST**
- B. INDKX
- C. RANK
- D. LAST

**Answer: A**

Explanation:

To create the Position column, you should use the FIRST () function. The FIRST () function returns the number of rows from the
