SAP Certified - Configuring SAP Ariba Strategic Sourcing Suite 認定 C_ACDET 試験問題 (Q57-Q62):

質問 #57

During the configuration of a new custom field, after it's been saved but before the field has been Published, you realize that you set the wrong type of the field.

What is the next step you should take to resolve the issue?

- A. Delete the field and create a new field with the same name and the intended field type
- B. Clear and recreate the field with same field name and the intended field type
- C. Change the field Type by selecting the intended type in the dropdown and Save
- D. Mark the field as Hidden, and create a new field with a slightly different name and the intended field Type

正解: A

質問 # 58

A customer has requested that a Contracts field be added to an export event. After creating the field, assigning the appropriate check box in the advanced section, and publishing, this field still cannot be found in the export. What can be done to rectify this? Note: There are 2 correct answers to this question.

- A. The data definition needs to be refreshed.
- B. The field must be accepted and published in the data definition.
- C. Custom fields cannot be added to import/exports.
- D. A custom visibility expression needs to be added stating isVisibleInExport == true.

正解: A、B

質問 # 59

When you have created a new custom field and marked it as reportable, saved and published your changes, the field does not show up in your reports. How can you resolve the issue?

- A. You did not assign the custom field to the appropriate report category. Ensure that the field is linked to the correct category for it to appear in reports.
- B. You created the custom field in a different module. Custom fields must be created in the same module where the reports are generated to show up correctly.
- C. You forgot to run the task Retrieve flexible fields metadata for reporting under Manage > Administration > Reporting Manager > Flex Field Reporting
- D. You need to wait 2 hours for the schema to refresh. Any change to the object model will be automatically synchronized to SAP Ariba Analytics on regular intervals

正解: C

質問 # 60

The customer wants to have a field to hold Contract Storage Locations and the address. Those locations are loaded from an external system, and the user should be able to search for storage locations. What should be used to hold the valid storage locations?

- A. You should load a new Enumeration Type and call it Storage Location and load the location addresses. Create a new field of type Enumeration with a custom filter to only Enumerations of type show Storage Locations.
- B. Create a new field of type Text, with a custom Validation where the available Storage Locations are listed.
- C. Create a new field of type Date, where each date entry is tied to a unique Storage Location and its corresponding address, allowing users to select locations based on historical data entries.
- D. You should create a new Flex Master Data (FMD) Template with appropriate attributes and call it Storage Location. Once the template is published and sample data loaded, you can create a custom field and select the type Storage Location
