### EMC Dell Avamar Deploy 2023 Sample Questions (Q117-Q122):

#### NEW QUESTION # 117

Which utility is used to ensure that the network throughput between nodes in a multinode Avamar server is acceptable?

- A. iperf
- B. ping
- C. dpnnetutil
- D. netstat

**Answer: A**

#### NEW QUESTION # 118

A storage administrator wants to migrate from a single-node Dell Avamar server to a Avamar multi-node server. Which method of replication should be used?

- A. Normal
- B. Selective
- C. Root-to-root
- D. Root-to-replicate

**Answer: C**

Explanation:

Explanation/Reference:

It is possible to configure four different replication configurations with the replication plug-in. In pre-Avamar 7.0, Many-to-One, Cross, and Root-to-root replication could be configured. In Avamar 7.0, using the replication plug-in, Many-to-One, One-to-Many, Chain, and Cross replication can be configured. However, as stated earlier, Root-to-root replication must be performed using the Cron-based replication. The replication plug-in cannot perform Root-to-root-based replication.

## Best practices for replication

- ◆ Protect the data on the Avamar server by replicating the data to another Avamar server.
- ◆ Use default standard replication, also known as “root-to-REPLICATE” replication, to do the following:
  - Provide the flexibility to configure replicated Avamar servers in a wide variety of ways
  - Have full visibility into all the backups that you replicate from one Avamar server to another

Standard replication also supports the ability to replicate the contents of many replication source Avamar servers to a single large replication destination (many-to-one), or to cross-replicate the contents of a couple of Avamar servers to each other. At any time, you can browse the contents of the /REPLICATE domain on the replication destination and see all the backups that have been replicated for each account.

### NEW QUESTION # 119

A customer has restarted the MCS service on their Avamar server to apply a configuration change made in the mcserver.xml file. The daily scheduled backups have not started, although they can connect successfully to the Avamar Administrator. Which task should be performed?

- A. Verify that GSAN service is running
- B. Restart the MCS service
- C. Verify that the garbage collection is not running
- D. **Restart the backup scheduler**

**Answer: D**

### NEW QUESTION # 120

What is the minimum physical RAM requirement for a 0.5 TB installation of EMC AVE?

- A. 1024 MB
- B. 2048 MB
- C. **3072 MB**
- D. 4096 MB

**Answer: C**

### NEW QUESTION # 121

An Avamar administrator needs to decrease the maximum number of activity records and hours under the activity monitor in the Avamar console.

Which configuration file settings should the administrator change?

- A. probe.xml
- B. usersettings.cfg
- C. mcclimcs.xml
- D. **mcserver.xml**

**Answer: D**
