Questions (Q567-Q572):

NEW QUESTION # 567

A company is running a multi-tier web application on premises. The web application is containerized and runs on a number of Linux hosts connected to a PostgreSQL database that contains user records. The operational overhead of maintaining the infrastructure and capacity planning is limiting the company's growth. A solutions architect must improve the application's infrastructure. Which combination of actions should the solutions architect take to accomplish this? (Choose two.)

- A. Migrate the PostgreSQL database to Amazon Aurora
- B. Set up an Amazon CloudFront distribution for the web application content.
- C. Migrate the web application to be hosted on AWS Fargate with Amazon Elastic Container Service (Amazon ECS).
- D. Set up Amazon ElastiCache between the web application and the PostgreSQL database.
- E. Migrate the web application to be hosted on Amazon EC2 instances.

Answer: A,C

Explanation:

Amazon Aurora is a fully managed, scalable, and highly available relational database service that is compatible with PostgreSQL. Migrating the database to Amazon Aurora would reduce the operational overhead of maintaining the database infrastructure and allow the company to focus on building and scaling the application. AWS Fargate is a fully managed container orchestration service that enables users to run containers without the need to manage the underlying EC2 instances. By using AWS Fargate with Amazon Elastic Container Service (Amazon ECS), the solutions architect can improve the scalability and efficiency of the web application and reduce the operational overhead of maintaining the underlying infrastructure.

NEW QUESTION # 568

If I write the below command, what does it do?
`ec2-run ami-e3a5408a -n 20 -g appserver`

- A. Start twenty instances as members of appserver group.
- B. Terminate twenty instances as members of appserver group.
- C. Start 20 security groups
- D. Creates 20 rules in the security group named appserver

Answer: A

NEW QUESTION # 569

_____ embodies the "share-nothing" architecture and essentially involves breaking a large database into several smaller databases. Common ways to split a database include 1) splitting tables that are not joined in the same query onto different hosts or 2) duplicating a table across multiple hosts and then using a hashing algorithm to determine which host receives a given update.

- A. Federation
- B. Failure recovery
- C. Sharding
- D. DDL operations

Answer: C

NEW QUESTION # 570

You have multiple Amazon EC2 instances running in a cluster across multiple Availability Zones within the same region. What combination of the following should be used to ensure the highest network performance (packets per second), lowest latency, and lowest jitter? Choose 3 answers

- A. Amazon HVM AMI
- B. Amazon PV AMI
- C. Amazon Linux
- D. Enhanced networking
- E. Amazon VPC

- F. Amazon EC2 placement groups

Answer: C,D,F

NEW QUESTION # 571

George has launched three EC2 instances inside the US-East-1a zone with his AWS account. Ray has launched two EC2 instances in the US-East-1a zone with his AWS account. Which of the below mentioned statements will help George and Ray understand the availability zone (AZ) concept better?

- A. The instances of George and Ray will be running in the same data centre
- B. The US-East-1a region of George and Ray can be different availability zones
- C. All the instances of George and Ray can communicate over a private IP without any cost
- D. All the instances of George and Ray can communicate over a private IP with a minimal cost

Answer: B

Explanation:

Each AWS region has multiple, isolated locations known as Availability Zones. To ensure that the AWS resources are distributed across the Availability Zones for a region, AWS independently maps the Availability Zones to identifiers for each account. In this case the Availability Zone US-East-1a where George's EC2 instances are running might not be the same location as the US-East-1a zone of Ray's EC2 instances. There is no way for the user to coordinate the Availability Zones between accounts.
