Latest Valid 220-1102 Exam Guide – 100% Valid CompTIA A+ Certification

Exam: Core 2 Latest Braindumps Sheet

As is known to us, internet will hurt their eyes to see the computer time to read long, the eyes will be tired, over time will be short-sighted. In order to help customers solve the problem, our CompTIA A+ Certification Exam: Core 2 test torrent support the printing of page. We will provide you with three different versions, the PDF version allow you to switch our 220-1102 study torrent on paper. You just need to download the PDF version of our 220-1102 Exam Prep, and then you will have the right to switch study materials on paper. We believe it will be more convenient for you to make notes. Our website is very secure and regular platform, you can be assured to download the version of our 220-1102 study torrent.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q419-Q424):

NEW QUESTION # 419

A technician is setting up a conference room computer with a script that boots the application on login. Which of the following would the technician use to accomplish this task? (Select TWO).

- A. File Explorer
- B. Device Manager
- C. System Information
- **D. Startup Folder**
- **E. Task Scheduler**
- F. Programs and Features

Answer: D,E

Explanation:

* B. Startup Folder1: The Startup folder is a special folder that contains shortcuts to programs or scripts

* that will run automatically when a user logs on. The technician can create a shortcut to the script and place it in the Startup folder for the conference room computer or for all users.

* E. Task Scheduler23: The Task Scheduler is a tool that allows you to create tasks that run at specified times or events. The technician can create a task that runs the script at login for the conference room computer or for all users.

NEW QUESTION # 420

A change advisory board authorized a setting change so a technician is permitted to Implement the change. The technician successfully implemented the change. Which of the following should be done next?

- A. Document the purpose of the change.
- B. Document the risk level.
- **C. Document the date and time of change**
- D. Document the findings of the sandbox test,

Answer: C

Explanation:

The correct answer is A. Document the date and time of change. After implementing a change, the technician should document the date and time of change in the change log or record. This helps to track the change history, monitor the change performance, and identify any issues or incidents related to the change.

Documenting the date and time of change is also a good practice for auditing and compliance purposes.

Documenting the purpose of the change (B) and the risk level © are steps that should be done before implementing the change, not after. These are important information that help to justify, prioritize, and plan the change. The purpose of the change should explain why the change is needed and what benefits it will bring to the organization. The risk level should assess the potential impact and probability of the change causing any problems or disruptions to the business.

Documenting the findings of the sandbox test (D) is also a step that should be done before implementing the change, not after. A sandbox test is a way of testing the change in an isolated environment that mimics the production environment. This helps to verify that the change works as expected and does not cause any errors or conflicts with other systems or processes. The findings of the sandbox test should be documented and reviewed by the change advisory board (CAB) before approving the change for implementation.

NEW QUESTION # 421

A user calls the help desk to report that mapped drives are no longer accessible. The technician verifies that clicking on any of the drives on the user's machine results in an error message. Other users in the office are not having any issues. As a first step, the technician would like to remove and attempt to reconnect the drives.

Which of the following command-line tools should the technician use?

- A. mkdir
- B. rename
- C. set
- D. net use

Answer: D

Explanation:

The technician should use net use command-line tool to remove and reconnect mapped drives. Net use is a command that allows users to manage network connections and resources, such as shared folders or printers.

Net use can be used to map or unmap network drives by specifying their drive letters and network paths. For example, net use Z: \\server\share maps drive Z: to \\server\share folder, and net use Z: /delete unmaps drive Z:.

Set is a command that displays or modifies environment variables for the current user or process. Set is not related to managing mapped drives. Mkdir is a command that creates a new directory or folder in the current or specified location. Mkdir is not related to managing mapped drives. Rename is a command that renames a file or folder in the current or specified location. Rename is not related to managing mapped drives.

At Wireless Security Mode, Click on Security Mode

Graphical user interface, text, application Description automatically generated

Select the WPA2

Graphical user interface, application, Teams Description automatically generated with medium confidence

Ann needs to connect to the BYOD SSID, using 2.4GHz. The selected security method chose should be WPA PSK, and the password should be set to TotallySecret.

Graphical user interface, application Description automatically generated

NEW QUESTION # 423

A technician needs to manually set an IP address on a computer that is running macOS. Which of the following commands should the technician use?

- A. ping
- B. arpa
- C. ifconfig
- D. ipconfig

Answer: C

Explanation:

Explanation

ifconfig is a command-line utility that allows you to configure network interfaces on macOS and other Unix-like systems¹. To set an IP address using ifconfig, you need to know the name of the network interface you want to configure (such as en0 or en1), and the IP address you want to assign (such as

192.168.0.150). You also need to use `sudo` to run the command with administrative privileges². The syntax of the command is:

```
sudo ifconfig interface address
```

For example, to set the IP address of `en1` to `192.168.0.150`, you would type:

```
sudo ifconfig en1 192.168.0.150
```

You may also need to specify other parameters such as subnet mask, gateway, or DNS servers, depending on your network configuration³. The other commands are not directly related to setting an IP address on macOS. `ipconfig` is a similar command for Windows systems⁴, `arpa` is a domain name used for reverse DNS lookup, and `ping` is a command for testing network connectivity.
