Many customers may be doubtful about our price of our CNX-001 exam questions. The truth is our price is relatively cheap among our peer. The inevitable trend is that knowledge is becoming worthy, and it explains why good CNX-001 resources, services and data worth a good price. We always put our customers in the first place. Thus we offer discounts from time to time, and you can get 50% discount at the second time you buy our CNX-001 question and answers after a year. Lower price with higher quality, that's the reason why you should choose our CNX-001 prep guide.

## CompTIA CNX-001 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Network Architecture Design: This section of the exam measures the skills of Network Architects and covers the ability to design scalable, secure, and efficient network architectures. It focuses on understanding design principles, selecting appropriate network components, and aligning architecture decisions with organizational needs. Candidates are expected to demonstrate a solid grasp of topology planning, high-availability configurations, and integration of cloud and on-premise systems to ensure reliability and performance. |

| | |
|---|---|
| Topic 2 | • Network Troubleshooting: This section of the exam measures the skills of Network Support Engineers and covers diagnosing and resolving connectivity and performance issues across various network layers. It focuses on identifying root causes, using diagnostic tools, and applying systematic troubleshooting methodologies. The goal is to ensure that professionals can minimize downtime, restore service quickly, and prevent recurring problems by maintaining a resilient and stable network environment. |
| Topic 3 | • Network Security: This section of the exam measures the skills of Security Engineers and covers core practices for protecting network infrastructure. It includes applying firewall rules, implementing access control measures, and designing secure segmentation strategies. The content emphasizes threat mitigation techniques, secure configuration of networking devices, and adherence to compliance frameworks, preparing professionals to safeguard both internal and external network assets effectively. |
| Topic 4 | • Network Operations, Monitoring, and Performance: This section of the exam measures skills of Network Operations Specialists and covers day-to-day operational management of network environments. It involves configuring monitoring tools, analyzing performance data, and responding to alerts. Candidates are evaluated on their ability to maintain network health, optimize throughput, and ensure consistent uptime by applying best practices for proactive performance tuning and operations management. |

If you cannot fully believe our CNX-001 exam prep, you can refer to the real comments from our customers on our official website before making a decision. There are some real feelings after they have bought our study materials. Almost all of our customers have highly praised our CNX-001 exam guide because they have successfully obtained the certificate. What's more, all contents are designed carefully according to the exam outline. As you can see, the quality of our CNX-001 Exam Torrent can stand up to the test. Your learning will be a pleasant process.

# CompTIA CloudNetX Certification Exam Sample Questions (Q27-Q32):

**NEW QUESTION # 27**
A call center company provides its services through a VoIP infrastructure. Recently, the call center set up an application to manage its documents on a cloud application. The application is causing recurring audio losses for VoIP callers. The network administrator needs to fix the issue with the least expensive solution. Which of the following is the best approach?

- A. Adding a second internet link and physically splitting voice and data networks into different routes
- B. Setting up VoIP devices to use a voice codec with a higher compression rate
- C. Creating two VLANs, one for voice and the other for data
- D. Configuring QoS rules at the internet router to prioritize the VoIP calls

**Answer: D**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Quality of Service (QoS) rules at the internet router can prioritize VoIP traffic over other data, such as cloud document access. VoIP is sensitive to latency and jitter, and configuring QoS ensures that voice packets are prioritized during congestion. This is the most cost-effective solution that doesn't require additional infrastructure.
Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Traffic Management and Prioritization":
"QoS policies are essential for ensuring that latency-sensitive traffic, such as VoIP, is prioritized over other types of data, particularly in bandwidth-limited scenarios." Other options:
* A. Adding a second internet link is effective but not cost-efficient.
* C. VLANs provide segmentation but don't guarantee bandwidth prioritization.
* D. Changing the codec may reduce bandwidth usage, but doesn't address prioritization directly.

**NEW QUESTION # 28**
You are designing a campus network with a three-tier hierarchy and need to ensure secure connectivity between locations and

traveling employees.

INSTRUCTIONS

Review the command output by clicking on the server, laptops, and workstations on the network.

Use the drop-down menus to determine the appropriate technology and label for each layer on the diagram.

Options may only be used once.

Click on the magnifying glass to make additional configuration changes.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

**NEW QUESTION # 29**

A network architect must ensure only certain departments can access specific resources while on premises.
Those same users cannot be allowed to access those resources once they have left campus. Which of the following would ensure access is provided according to these requirements?

- A. Implementing a PKI-based authentication system to ensure access
- B. Enabling MFA for only those users within the departments needing access
- C. Configuring geofencing with the IPs of the resources
- D. Configuring UEBA to monitor all access to those resources during non-business hours

**Answer: C**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Geofencing is a network access control method that enforces restrictions based on location data. In this scenario, the organization requires access to be permitted only when users are on premises (i.e., within a specific physical location). Geofencing can be implemented using source IP ranges or GPS-based location data to define boundaries (fences). This allows access to certain applications or services only when the user is inside a designated network or area.
MFA (Option A) provides identity assurance but does not enforce physical location-based restrictions.
UEBA (Option C) provides behavioral analytics but is not used for real-time access control.
PKI (Option D) provides identity validation through certificates but is not location-aware.
Relevant Extract from CompTIA CloudNetX CNX-001 Official Study Guide:
"Geofencing allows organizations to define physical or logical boundaries that restrict or allow access based on user location. Policies can be configured to allow access only when users are on a trusted campus or corporate network, denying requests originating from outside the geofenced area." Covered under the topic: "Access Control Technologies and Identity Enforcement Mechanisms."

**NEW QUESTION # 30**

A cafe uses a tablet-based point-of-sale system. Customers are complaining that their food is taking too long to arrive. During an investigation, the following is noticed:
* Every kitchen printer did not print the orders
* Payments are processing correctly
* The cloud-based system has record of the orders
* This issue occurred when the cafe was busy
Which of the following is the best way to mitigate this issue?

- A. Adding an access point exclusively for the kitchen
- B. Upgrading the kitchen printers' wireless dongles
- C. Assigning the kitchen printers static IP addresses
- D. Updating the application

**Answer: A**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Since payments are working and orders are being recorded in the cloud, the issue likely lies in the local wireless network between the tablets and the kitchen printers. If the issue only occurs during high usage periods, it's likely a congestion or signal quality issue. Adding a dedicated access point for the kitchen can isolate printer traffic and improve reliability.
Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Wireless Performance and Interference Management":
"Segmenting traffic or deploying dedicated APs for mission-critical devices can reduce contention and ensure reliability in congested wireless environments." Other options:
* A. App updates won't fix wireless interference.
* C. Dongle upgrades may help but don't isolate the traffic.
* D. Static IPs help with addressing, not with wireless reliability.

# NEW QUESTION # 31
A network architect must design a new branch network that meets the following requirements:
*No single point of failure
*Clients cannot be impacted by changes to the underlying medium
*Clients must be able to communicate directly to preserve bandwidth
Which of the following network topologies should the architect use?

- A. Spine-and-leaf
- B. Mesh
- C. Hub-and-spoke
- D. Star

**Answer: B**

Explanation:
A full-mesh topology gives every node redundant paths to every other node, eliminating any single point of failure, and lets clients communicate directly over the optimal link without depending on an intermediate hub or core.
