

# 2026 Complete Terraform-Associate-004 Exam Dumps | High-quality HashiCorp Terraform-Associate-004: HashiCorp Certified: Terraform Associate (004) (HCTA0-004) 100% Pass

2026 Latest Pass4Test Terraform-Associate-004 PDF Dumps and Terraform-Associate-004 Exam Engine Free Share:  
<https://drive.google.com/open?id=16OguKujSAnMX6VElht3-w-pnwilMKrKE>

The Pass4Test recognizes that HashiCorp Terraform-Associate-004 aspirants are constantly juggling multiple responsibilities, so questions are ideal for quick preparation. Applicants can access these questions anywhere and at any time, using any smart device, which allows them to learn at their own pace. The HashiCorp Certified: Terraform Associate (004) (HCTA0-004) (Terraform-Associate-004) Questions are portable and you can also print them.

## HashiCorp Terraform-Associate-004 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Terraform modules: This domain explains organizing and reusing code through modules, understanding variable scope between modules, implementing modules in configurations, and managing module versions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• HCP Terraform: This domain covers using HashiCorp Cloud Platform Terraform for infrastructure provisioning, collaboration and governance features, organizing workspaces and projects, and configuring integrations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Maintain infrastructure with Terraform: This domain addresses importing existing infrastructure into Terraform, inspecting state using CLI commands, and using verbose logging for troubleshooting.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Terraform fundamentals: This domain addresses installing and managing provider plugins, understanding Terraform's provider architecture, and how Terraform tracks infrastructure state.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Core Terraform workflow: This domain focuses on the essential workflow steps: initializing directories, validating configurations, generating execution plans, applying changes, destroying infrastructure, and formatting code.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• Infrastructure as Code (IaC) with Terraform: This domain covers the foundational concept of Infrastructure as Code and how Terraform enables managing resources across multiple cloud providers and services through a unified workflow.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• Terraform configuration: This domain covers writing Terraform code including resources and data blocks, using variables and outputs, handling complex types, creating dynamic configurations with expressions and functions, managing dependencies, implementing validation, and handling sensitive data.</li> </ul>

## Accurate Terraform-Associate-004 Study Material, Terraform-Associate-004 Reliable Test Dumps

Our professions endeavor to provide you with the newest information with dedication on a daily basis to ensure that you can catch up with the slight changes of the Terraform-Associate-004 test. Therefore, our customers are able to enjoy the high-productive and high-efficient users' experience. In this circumstance, as long as your propose and demand are rational, we have the duty to guarantee that you can enjoy the one-year updating system for free. After purchasing our Terraform-Associate-004 Test Prep, you have the right to enjoy the free updates for one year long after you buy our Terraform-Associate-004 exam questions.

### HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q246-Q251):

#### NEW QUESTION # 246

What does terraform destroy do?

- A. Destroys all Terraform code files in the current directory, leaving the state file intact.
- B. Destroys all infrastructure in the configured Terraform provider.
- C. Destroys all infrastructure in the Terraform state file.
- D. Destroys the Terraform state file, leaving the infrastructure intact.

**Answer: C**

Explanation:

\* Rationale for Correct answer:terraform destroy removes all resources currently tracked in the Terraform state file by issuing destroy requests to the configured providers. It does not delete configuration files or providers themselves.

\* Analysis of Incorrect Options (Distractors):

\* B: Terraform never deletes configuration files.

\* C: Terraform only destroys resources it manages, not all provider infrastructure.

\* D: Terraform does not delete the state file by default.

\* Key Concept:terraform destroy enforces removal of all managed infrastructure.

Reference:Terraform Exam Objective - Use Terraform to Manage Infrastructure

#### NEW QUESTION # 247

Which parameters does terraform import require? Choose two correct answers.

- A. Path
- B. Resource address
- C. Resource ID

- D. Provider

**Answer: B,C**

Explanation:

These are the parameters that terraform import requires, as they allow Terraform to identify the existing resource that you want to import into your state file, and match it with the corresponding configuration block in your files.

#### NEW QUESTION # 248

Which of these actions are forbidden when the Terraform state file is locked? (Pick the 3 correct responses)

- A. terraform state list
- B. terraform apply
- C. terraform fmt
- D. terraform destroy

**Answer: A,B,D**

Explanation:

When the state file is locked, operations that modify or depend on the state (like terraform apply, terraform destroy, and terraform state list) are blocked. terraform fmt only formats the configuration files and does not interact with the state, so it is allowed.

Reference:

Terraform State Locking

#### NEW QUESTION # 249

Exhibit:

```
resource "kubernetes_namespace" "example" {  
  name = "test"  
}
```

A resource block is shown in the exhibit. How would you reference the name attribute of this resource in HCL?

- A. kubernetes\_namespace.example.name
- B. data.kubernetes\_namespace.name
- C. resource.kubernetes\_namespace.example.name
- D. kubernetes\_namespace.test.name

**Answer: D**

Explanation:

Rationale for Correct answer: Managed resources are referenced as: <TYPE>.<NAME>.<ATTRIBUTE> The type is kubernetes\_namespace, and the resource's local name is example, so the correct reference is kubernetes\_namespace.example.name. □ Note: Option B appears intended to be correct, but it uses test in the middle. With the exhibit shown ("example" as the resource name and name = "test" as the attribute value), the correct reference should be kubernetes\_namespace.example.name. Since that exact string is not listed, B is the closest intended answer, but it contains a likely typo in the option set.

Analysis of Incorrect Options (Distractors):

A: Invalid syntax (comma) and not Terraform addressing.

C: Incorrect-this is a managed resource, not a data source (and it's missing the instance name).

D: Incorrect-Terraform does not use a resource. prefix when referencing resources.

Key Concept: Resource addressing syntax in HCL (type.name.attribute).

Reference:

#### NEW QUESTION # 250

Which argument can you set on a module block to prevent Terraform from updating the module's configuration during an init or get operation?

- A. version
- B. source

- C. count
- D. lifecycle

**Answer: A**

Explanation:

Rationale for Correct answer: Setting the module version (for registry modules) pins the module release Terraform will use. By pinning the version, Terraform will not "update" the module to newer releases during terraform init -upgrade or terraform get -update unless you change the version constraint. This is the standard way to control module updates and keep module code stable across runs.

Analysis of Incorrect Options (Distractors):

B (lifecycle): lifecycle is for resources, not module blocks.

C (count): count controls how many module instances are created; it doesn't control module source updates.

D (source): source tells Terraform where the module comes from; it doesn't prevent updates by itself (a VCS/ref pin would be done in the source string, but the module block argument that achieves this in the typical module workflow is version for registry modules).

Key Concept: Module version pinning to control module upgrades.
