Even you have bought our Salesforce Identity-and-Access-Management-Architect learning braindumps, and we will send the new updates to you one year long. On one hand, all content can radically give you the best backup to make progress.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q110-Q115):

NEW QUESTION # 110
The CIO of universal containers(UC) wants to start takingadvantage of the refresh token capability for the UC applications that utilize Oauth 2.0. UC has listed an architect to analyze all of the applications that use Oauth flows to. See where refresh Tokens canbe applied. Which two OAuth flows should the architect consider in their evaluation? Choose 2 answers

- A. User-Agent
- B. Jwt bearer token
- C. Username-password
- D. Web server

Answer: A,D

Explanation:
The two OAuth flows that support refresh tokens are Web server and User-Agent. According to the Salesforce documentation2, "The webserver authentication flow and user-agent flow both provide a refresh token that can be used to get a new access token." Therefore, option A and C are the correct answers.
References: Salesforce Documentation

NEW QUESTION # 111
Containers (UC) has implemented SAML-based single Sign-on for their Salesforce application and is planning to provide access to Salesforce on mobile devices using the Salesforce1 mobile app. UC wants to ensure that Single Sign-on is used for accessing the Salesforce1 mobile App. Which two recommendations should the Architect make? Choose 2 Answers

- A. Configure the Salesforce1 App to use the MY Domain URL.
- B. Configure the Embedded Web Browser to use My Domain URL.
- C. Use the existing SAML SSO flow along with Web Server Flow.
- D. Use the existing SAML-SSO flow along with User Agent Flow.

Answer: A,D

Explanation:
Explanation
To ensure that SSO is used for accessing the Salesforce1 mobile app, UC should configure the Salesforce1 app to use the My Domain URL instead of the default login.salesforce.com URL. My Domain is a feature that allows UC to create a custom domain name for their Salesforce org that supports SSO with their identity provider. UC should also use the existing SAML-SSO flow along with User Agent Flow, which is an OAuth
2.0 flow that allows users to authenticate with their identity provider through an embedded browser within the mobile app. Verified
References: [Configure SSO with Salesforce as a SAML Service Provider], [User-Agent Flow]

NEW QUESTION # 112
Uwversal Containers (UC) is building a custom employee hut) application on Amazon Web Services (AWS) and would like to store their users' credentials there. Users will also need access to Salesforce for internal operations. UC has tasked an identity architect with evaluating Afferent solutions for authentication and authorization between AWS and Salesforce.
How should an identity architect configure AWS to authenticate and authorize Salesforce users?

- A. Develop a custom Auth server in AWS.
- B. Configure AWS as an OpenID Connect Provider.

- C. Configure the custom employee app as a connected app.
- D. Create a custom external authentication provider.

Answer: B

NEW QUESTION # 113

The CIO of universal containers(UC) wants to start taking advantage of the refresh token capability for the UC applications that utilize Oauth 2.0. UC has listed an architect to analyze all of the applications that use Oauth flows to. See where refresh Tokens can be applied. Which two OAuth flows should the architect consider in their evaluation? Choose 2 answers

- A. User-Agent
- B. Jwt bearer token
- C. Username-password
- D. Web server

Answer: A,D

Explanation:
Explanation
The two OAuth flows that support refresh tokens are Web server and User-Agent. According to the Salesforce documentation2, "The web server authentication flow and user-agent flow both provide a refresh token that can be used to get a new access token." Therefore, option A and C are the correct answers.
References: Salesforce Documentation

NEW QUESTION # 114

Universal Containers (UC) is using a custom application that will act as the Identity Provider and will generate SAML assertions used to log in to Salesforce. UC is considering including custom parameters in the SAML assertion. These attributes contain sensitive data and are needed to authenticate the users. The assertions are submitted to salesforce via a browser form post. The majority of the users will only be able to access Salesforce via UC's corporate network, but a subset of admins and executives would be allowed access from outside the corporate network on their mobile devices. Which two methods should an Architect consider to ensure that the sensitive data cannot be tampered with, nor accessible to anyone while in transit?

- A. Use Salesforce's Certificate to digitally sign the SAML Assertion and a Mobile Device Management client on the users' mobile devices.
- B. Use the Identity provider's certificate to digitally Sign and the Identity provider's certificate toencrypt the payload.
- C. Use a custom login flow to retrieve sensitive data using an Apex callout without including the attributes in the assertion.
- D. Use the Identity Provider's certificate to digitally sign and Salesforce's Certificate to encryptthe payload.

Answer: B,C

Explanation:
Using the identity provider's certificate to digitally sign and encrypt the payload, and usinga custom login flow to retrieve sensitive data using an Apex callout without including the attributes in the assertion are two methods that can ensure that the sensitive data cannot be tampered with, nor accessible to anyone while in transit. Option A is not a good choice because using Salesforce's certificate to encrypt the payload may not work, as Salesforce does not support encrypted SAML assertions. Option B is not a good choice because using Salesforce's certificate to digitally sign the SAML assertionmay not be necessary, as Salesforce does not validate digital signatures on SAML assertions. Also, using a mobile device management client on the users' mobile devices may not be relevant, as it does not affect how the sensitive data is transmitted between the identity provider and Salesforce.
