In a word, the three different versions of our CIS-Discovery test torrent.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q114-Q119):

NEW QUESTION # 114

For CMDB Health, relationships can be which of the following choices? (Choose three.)

- A. Recommended
- B. Required
- C. Stale
- D. Orphan
- E. Duplicate

Answer: C,D,E

Explanation:

CMDB Health measures the quality of the data in the CMDB by testing it against predefined rules and metrics. One of the categories of these rules is Correctness, which tests the data against data integrity rules such as identification rules, orphan CI rules, and stale CI rules¹. These rules help identify and flag the existing CMDB relationships that are not compliant with the suggested relationships².

* Duplicate relationships are those that have more than one relationship of the same type between the same two CIs³. For example, if a server CI has two relationships of type "Depends on" with the same network CI, it is a duplicate relationship.

* Stale relationships are those that have not been updated for a specified period of time³. For example, if a server CI has a relationship of type "Runs on" with a virtual machine CI that has not been discovered for more than 60 days, it is a stale relationship.

* Orphan relationships are those that are missing a defined relationship within the CMDB³. For example, if a server CI has no relationship of type "Depends on" with any network CI, it is an orphan relationship.

NEW QUESTION # 115

_____ and _____ are only used for the Application Pattern Type.

(Choose 2 answer)

Response:

- A. Run Order
- B. CI Type
- C. Operating System
- D. Identification Section

Answer: A,C

NEW QUESTION # 116

Which of the following fields are editable from a Merge Table pattern operation?

Choose 3 answers

- A. Target Table
- B. Second Table
- C. Primary Table
- D. First Table

Answer: A,B,D

Explanation:

In a Merge Table pattern operation within ServiceNow Discovery, the editable fields typically include the Target Table, Second

Table, and First Table. These fields are configurable and allow users to specify the tables involved in the merge operation. The Target Table is where the merged data will be stored, while the First and Second Tables are the source tables whose data is being merged. The Primary Table is not typically an editable field in this context. References = ServiceNow Discovery documentation, particularly the sections discussing pattern design and operations, including Merge Table operations within Discovery Patterns.

NEW QUESTION # 117

Select the correct statements for ECC Queue during discovery.

Response:

- A. An Input record in ECC Queue is a sensor
- B. An output record in ECC Queue is a sensor
- C. An output record in ECC Queue is a shazzam probe
- D. An Input record in ECC Queue is a shazzam probe

Answer: A,C

NEW QUESTION # 118

Which of the choices provides active discovery errors with a help link for each error?

- A. IP Address Failure Report
- B. Discovery Schedule
- C. MID Server Dashboard
- D. Discovery Dashboard

Answer: D

Explanation:

The Discovery Dashboard provides a summary of the Discovery status, including the number of active discovery errors, the number of devices discovered, and the number of credentials used. Each error has a help link that provides more information about the cause and possible solutions.
