SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition, Sourcing and Procurement Sample Questions (Q74-Q79):

NEW QUESTION # 74

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create business processes with a high number of people involved in a pre-defined sequence
- B. To create cross-product workflow procedures
- C. To create very simple release or approval procedures
- D. To create complex, repeated work processes with iterative cycles
- E. To create standard procedures from SAP Signavio Process Navigator

Answer: A,B,C

Explanation:

SAP S/4HANA Cloud Business Workflows are designed to streamline and automate business processes across various scenarios. Below is an explanation of the correct answers:

* To create cross-product workflow procedures (A): Business Workflows enable seamless integration and collaboration across different SAP products and modules, ensuring end-to-end process automation.

* To create business processes with a high number of people involved in a pre-defined sequence (B):

These workflows are ideal for managing complex processes involving multiple stakeholders, ensuring tasks are executed in a structured and sequential manner.

* To create very simple release or approval procedures (C): Business Workflows support straightforward approval processes, such as purchase order approvals or invoice verifications, ensuring compliance and efficiency.

* To create complex, repeated work processes with iterative cycles (D): While workflows can handle repetitive tasks, they are not specifically designed for highly iterative or cyclical processes.

* To create standard procedures from SAP Signavio Process Navigator (E): SAP Signavio Process Navigator is used for process modeling and documentation, not for directly creating workflows in SAP S/4HANA Cloud.

NEW QUESTION # 75

When using the Local SAP S/4HANA Database Schema migration approach, what is the maximum file size? Note: There are 2 correct answers to this question.

- A. 100 MB per file
- B. 160 MB per ZIP file
- C. 160 MB per file
- D. 100 MB per ZIP file

Answer: A,C

NEW QUESTION # 76

What is a Purchasing Info Record?

- A. A master data record that contains information specific to a material and the supplier.

- B. A master data record that contains information specific to a material and the customer.
- C. A master data record that contains information specific to a material and the contract.
- D. A master data record that contains information specific to a material and the purchase order.

Answer: A

Explanation:

A Purchasing Info Record (PIR) is a master data object in SAP S/4HANA that stores procurement-related information for a specific material and supplier combination. Below is an explanation of the correct answer:

* A master data record that contains information specific to a material and the supplier (B): The PIR includes details such as pricing conditions, order quantities, and delivery schedules for a specific material supplied by a specific vendor. It serves as a reference point for procurement transactions like purchase orders.

* A master data record that contains information specific to a material and the purchase order (A):

Purchase orders are transactional documents, not master data. The PIR provides the basis for creating purchase orders but is not tied to individual orders.

* A master data record that contains information specific to a material and the customer (C):

Customer-related information is managed in sales and distribution processes, not in purchasing info records.

* A master data record that contains information specific to a material and the contract (D):

Contracts are separate procurement documents, and while they may reference PIRs, the PIR itself is not tied to a specific contract.
