Our ACP-120 training dumps are highly salable not for profit in our perspective solely, they are helpful tools helping more than 98 percent of exam candidates get the desirable outcomes successfully. Our ACP-120 guide prep is priced reasonably with additional benefits valuable for your reference. High quality and accuracy ACP-120 Exam Materials with reasonable prices can totally suffice your needs about the exam. All those merits prefigure good needs you may encounter in the near future.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q76-Q81):

NEW QUESTION # 76

A team is complaining that their Jira project is slow to use. You are able to replicate the slow behavior by viewing and trying to edit one of their issues.

Which logging option will help you or a system administrator to diagnose the problem?

- **A. Enable profiling globally, so the logs can be inspected for anomalies when viewing the issue.**
- B. Use the Log Analyzer to get more information about the issue view process.
- C. Set the logging to DEBUG level on all packages causing activity for that issue.
- D. Configure Jira to record and log the JavaScript execution from the browser console.

Answer: A

Explanation:

Reference: <https://www.elastic.co/guide/en/kibana/current/xpack-logs-analysis.html>

NEW QUESTION # 77

You have a project with several issue types, associated unique workflows, and a number of components.

The decision has been made to have all new issues assigned automatically.

To that end, you've set default assignee(s) for the project lead, component leads, and removed the Assignee field from the screens associated with the Create Issue operation.

One of the issue types is still being created without an Assignee.

What is the most likely cause of the problem?

- **A. The assignee is being set to Unassigned in the first post-function of the create transition.**
- B. The default assignee for the issues' component is still set to Unassigned.
- C. Users creating this issue type do not have the Assign Issue permission.
- D. The post function Assign to Lead Developer is missing in the create transition.
- E. The issue type's field configuration for Component/s is not set to Required.

Answer: A

NEW QUESTION # 78

Billie needs to perform various restricted tasks in the system. You must decide whether to grant her site admin or organization admin privileges.

Identify two reasons why you must make her an organization admin (Choose two)

- A. Billie needs to log in as other users for troubleshooting user accounts
- **B. Billie needs to enable other users to be organization admins**
- **C. Billie needs to remove users from the site**
- D. Billie needs to enable other users to be site or product admins
- E. Billie needs to make changes to user's profiles

Answer: B,C

NEW QUESTION # 79

In his personal settings, Bob has the setting "Email notifications for issue activity set to "Don't send me email notifications".

Identify two reasons why Bob continues to receive some email notifications from Jira (Choose two)

- A. Bob was sent an email via the Send email feature in Jira
- **B. Bob is mentioned directly in a comment**

- C. Bob was added as a watcher of an issue
- **D. Bob has been subscribed to several filters**
- E. Bob has the Watch your issues setting enabled

Answer: B,D

NEW QUESTION # 80

Peter is building a workflow in his team-managed project. He can add several rules to his workflow except for one rule. Identify that rule.

- A. Rule to clear the Description when reopening.
- B. Rule to ensure only Peter can approve Stories.
- **C. Rule to reopen Sub-tasks when reopening Stories.**
- D. Rule to clear the Assignee when closing.
- E. Rule to ensure only the Reporter can close bugs.

Answer: C

Explanation:

In team-managed projects, workflows are simplified and configured within Project settings > Workflow.

Users (typically project admins) can add rules to transitions, such as clearing fields, restricting transitions, or setting field values.

However, team-managed workflows do not support complex automation-like rules, such as automatically reopening Sub-tasks when a Story is reopened, as this requires interacting with related issues (Sub-tasks), which is not supported out-of-box in team-managed workflow rules.

* Explanation of the Correct Answer (Option B):

* The rule to reopen Sub-tasks when reopening Stories requires a workflow rule to detect the transition of a Story to an open status and then automatically transition its Sub-tasks to an open status. Team-managed workflows do not support rules that affect related issues (e.g., Sub-tasks) during a transition. This functionality requires Jira automation or a company-managed project workflow with custom post functions, which are not available in team-managed projects.

* Exact Extract from Documentation:

Configure workflows in team-managed projects

Team-managed projects use simplified workflows that allow adding rules to transitions, such as:

* Restricting transitions to specific users or roles.

* Setting or clearing field values (e.g., Assignee, Description).

* Requiring fields to be filled. Rules are limited to the issue being transitioned and cannot affect related issues (e.g., Sub-tasks, Epics).

To automate actions on related issues, use Jira automation rules. Note: Team-managed workflows are project-specific and edited in Project settings > Workflow. (Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Why This Fits: The rule to reopen Sub-tasks requires interacting with related issues (Sub-tasks), which is beyond the capabilities of team-managed workflow rules, making Option B the correct answer.

* Why Other Options Are Incorrect:

* Rule to clear the Assignee when closing (Option A):

* Team-managed workflows support rules to clear fields during a transition. A rule can be added to the transition to the Closed status to clear the Assignee field.

* Extract from Documentation:

You can add a rule to a transition to clear a field, such as Assignee, when moving to a status like Closed.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Rule to ensure only Peter can approve Stories (Option C):

* Team-managed workflows allow restricting transitions to specific users or roles. A rule can be added to the transition to an Approved status to allow only Peter to perform it.

* Extract from Documentation:

Add a rule to restrict a transition to a specific user (e.g., Peter) or role, ensuring only they can move issues to a status like Approved.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Rule to clear the Description when reopening (Option D):

* Team-managed workflows support clearing fields during transitions. A rule can be added to the transition to an Open status to clear the Description field.

* Extract from Documentation:

Rules can clear fields like Description during a transition, such as when reopening an issue.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Rule to ensure only the Reporter can close bugs (Option E):

* Team-managed workflows allow restricting transitions to specific users, including the Reporter. A rule can be added to the

transition to the Closed status for bugs to allow only the Reporter to perform it.

* Extract from Documentation:

Restrict a transition to the Reporter to ensure only they can move issues to a status like Closed.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Additional Notes:

* Team-managed workflows are designed for simplicity, with rules limited to the issue being transitioned. Complex logic, such as affecting Sub-tasks (Option B), requires Jira automation rules, which are separate from workflow rules.

* Peter, as a project admin in a team-managed project, can edit the workflow in Project settings > Workflow.
