## WGU Practical Applications of Prompt QFO1 Sample Questions (Q24-Q29):

### NEW QUESTION # 24

Which programming software task is well-suited for artificial intelligence?

- A. Suggesting code modifications
- B. Specifying project structure
- C. Performing user testing
- D. Adding comments to scripts

**Answer: A**

Explanation:

Artificial Intelligence, particularly Large Language Models (LLMs) trained on vast repositories of public code, has become exceptionally proficient at suggesting code modifications. This task is well-suited for AI because code is inherently structured and follows strict logical and syntactical rules. AI can analyze a snippet of code, identify inefficiencies, detect potential bugs, and suggest more "pythonic" or optimized ways to achieve the same result. This is often referred to as "AI-assisted development" or "copiloting." While AI can certainly add comments to scripts, that is a relatively low-level task compared to the complex logic involved in code modification. Specifying project structure and performing user testing often require a high-level architectural understanding and human-centric feedback that AI currently lacks in a holistic sense.

Suggesting modifications involves the AI "understanding" the intent of the code and predicting the next logical sequence or identifying a better algorithm to solve a problem. This capability significantly accelerates the development lifecycle, allowing developers to focus on high-level logic while the AI handles boilerplate code and optimization suggestions. It bridges the gap between raw intent and functional implementation by leveraging the statistical likelihood of code patterns found in high-quality software libraries.

### NEW QUESTION # 25

A person wants to use AI to make a technical document easier to comprehend. Which prompt engineering solution is most effective to achieve this goal?

- A. Correctly instruct the model with the keywords "translating" and "document"
- B. Ask the model to create another version with "read and summarize"
- C. Include reading-level limitations with "at a tenth-grade reading level"
- D. Give a list of appropriate words with the phrase "using these words"

**Answer: C**

Explanation:

The most effective way to optimize AI for clarity and comprehension is to include reading-level limitations.

While "summarizing" (Option B) shortens the text, it doesn't necessarily make the remaining language simpler. However, specifying a "tenth-grade reading level" (or "Explain it like I'm five") provides the AI with a very specific linguistic constraint. It forces the model to swap complex jargon for common synonyms, use shorter sentence structures, and avoid passive voice.

This technique is a form of Output Constraint. Reading levels are well-defined metrics that AI models can emulate because they have been trained on vast amounts of graded educational material. By setting this boundary, the user ensures the output is accessible to a broader audience without losing the core technical meaning. In practical professional settings—such as translating a medical white paper for a patient or a legal contract for a small business owner—this type of prompting is essential. It transforms dense, "impenetrable" text into actionable information, demonstrating how specific constraints can be used to reformat and simplify complex data sets effectively.

### NEW QUESTION # 26

A person wants to use AI to digitize receipts for expense tracking. Which advanced AI tool should be used?

- A. Virtual personal assistant
- B. Voice recognition

- C. Speech synthesis
- **D. Optical character recognition**

**Answer: D**

Explanation:

To digitize physical documents like receipts, the necessary technology is Optical Character Recognition (OCR). OCR is a specialized AI field that involves the conversion of images of typed, handwritten, or printed text into machine-encoded text. When you take a photo of a receipt, the AI analyzes the pixels to identify the shapes of letters and numbers, then translates those shapes into digital characters that can be stored in a database or an Excel spreadsheet.

In the context of expense tracking, advanced OCR does more than just "read" the text; it uses "intelligent character recognition" to understand the layout. It can identify which number is the "Total," which is the "Tax," and which is the "Date" by looking at their positions on the page and the keywords nearby. This makes OCR an essential bridge between the physical and digital worlds. While a "Virtual personal assistant" (Option B) might use an OCR tool to help you, the specific technology doing the work of digitization is OCR. It saves hours of manual data entry and reduces the human error associated with typing in long strings of financial data, making it a powerful "practical application" of AI in business and personal finance.

### NEW QUESTION # 27

A person asks a large language model to develop a product description for a laptop. The person refines the prompt several times, each time adding more details, context, and restrictions to improve the result. Which prompting technique is described?

- A. Chain of thought (COT)
- B. Few-shot
- **C. Least to most**
- D. Cognitive verifier pattern

**Answer: C**

Explanation:

The scenario describes Least to most prompting. This technique involves breaking down a complex task into smaller, manageable sub-problems and solving them sequentially. In this case, the user starts with a basic request and progressively adds layers of complexity—details, context, and restrictions—to guide the AI toward a sophisticated final output. It is essentially a strategy of "building up" the prompt complexity until the model has enough specific information to meet the high-level requirement.

Unlike "Chain of Thought" (COT), which focuses on the AI showing its internal reasoning steps for a single logic problem, "Least to most" is about the user-led structural decomposition of a task. It is highly effective for creative or technical writing where a "zero-shot" (single try) approach often yields generic results. By refining the prompt iteratively, the user ensures the AI understands each constraint before moving to the next level of detail. In practical applications, this technique is used to "warm up" the model's context window with specific domain data, ensuring that by the time the final description is generated, the AI is fully aligned with the technical specs and brand voice required for the laptop.

### NEW QUESTION # 28

Which prompting technique involves using information from an initial prompt to guide the AI to a second prompt?

- **A. Generated knowledge**
- B. Zero-shot
- C. Least to most
- D. Cognitive verifier pattern

**Answer: A**

Explanation:

The Generated Knowledge technique is a two-step optimization process. In the first step, the user asks the AI to generate a set of relevant facts, rules, or background information about a topic. In the second step, this newly "generated knowledge" is incorporated into a follow-up prompt to improve the accuracy of the final answer. This is particularly useful when the AI needs to perform a task that requires specific domain expertise that might not be immediately "top-of-mind" for the model.

For example, if you want the AI to write a medical summary, you might first ask it to "List the current guidelines for treating hypertension" (Generated Knowledge). Then, you use that list in a second prompt:

"Based on these guidelines, evaluate this patient's case." This technique prevents the AI from relying purely on its general training

data and instead forces it to use a "grounded" set of facts as a reference point. It is a powerful way to reduce hallucinations because the model is essentially building its own "contextual library" before attempting the main task. This sequential approach ensures that the final output is backed by explicit logic rather than just probabilistic word prediction.
