Free Valid WGU Information-Technology-Management Questions Updates and Free Demos

WGU D075 Information Technology Management Essentials with complete solutions.

1. **Adware:** Programs that automatically display or download advertising to a computer.

2. **Application Software:** Software that is designed for the user to carry out a specific task.

3. **Best Practice:** A management process, technique, or method that is most effective at arriving at a desired outcome or a better outcome than any other process, technique, or method.

4. **Big Data:** Data that is collected from all over the internet, including smartphone metadata, internet usage records, social media activity, computer usage records, and countless other data sources.

5. **Bus Topology:** A network topology sometimes called a linear bus, where each of a network's nodes is connected to a common linear backbone that has two endpoints.

6. **Business Analytics:** Attempts to make connections between data so organizations can try to predict future trends that may give them a competitive advantage.

7. **Business Intelligence (BI):** Strategies and technologies used by enterprises for the data analysis of business information.

8. **Cache:** A hardware or software component that stores data so that future requests for that data can be served faster.

9. **Campus Area Network (CAN):** A computer network that connects two or more LANs that are located on a campus.

10. **Chief Information Officer (CIO):** A job title for the board-level head of an information technology department within a business organization. The CIO's job is to make sure IT assets are in place to ensure a smooth transition.

11. **Chief Information Security Officer (CISO):** The CISO is generally focused on the security of an organization's data and information, making sure it is backed up, deciding who gets to see it and who does not, and so on.

12. **Chief Security Officer (CSO):** A CSO is in charge of such things as the physical security and safety of employees, facilities, and corporate assets and may have a law enforcement background.

13. **Chief Technology Officers (CTO):** The CTO runs the organization's IT engineering group and serves as the company's top technology architect.

14. **Click Fraud:** An internet fraud scheme that automatically passes a user to an advertiser, whether they had any intention of visiting or not, in order to collect a per-click fee.

Information-Technology-Management Free Sample | Information-Technology-Management Reliable Exam Topics

It is universally accepted that the exam is a tough nut to crack for the majority of candidates, but the related Information-Technology-Management certification is of great significance for workers in this field so that many workers have to meet the challenge. Fortunately, you need not to worry about this sort of question any more, since you can find the best solution in this

website--our Information-Technology-Management Training Materials. With our continued investment in technology, people and facilities, the future of our company has never looked so bright. There are so many advantages of our Information-Technology-Management practice test and I would like to give you a brief introduction now.

WGU Information Technology Management QGC1 Sample Questions (Q191-Q196):

NEW QUESTION # 191
What is the definition of the accountability vs. ownership paradox?

- A. An evaluation of where a business is headed, what it wants to achieve, and how it will support its objectives
- B. The ability to use a uniquely enterprise view to create business process change
- C. A situation in which a company's CIO is responsible for the outcomes of technology implementations but does not have the power to change ' business processes
- D. A situation in which the CEO is concerned they might be overlooking a digital disrupter that competitors have surely discovered

Answer: C

NEW QUESTION # 192
A company wants to create a shopping bot that will search several retailers' websites to find the best prices on products that it frequently orders. Which type of software should the company use to create a shopping bot?

- A. Neural network
- B. Intelligent agent
- C. Fuzzy logic
- D. Virtual reality

Answer: B

Explanation:
Understanding Intelligent Agents:
Intelligent agents are software programs that perform tasks autonomously, such as searching for information, making recommendations, or automating repetitive actions.
They are designed to mimic human behavior in specific tasks.
Application in Shopping Bots:
A shopping bot uses intelligent agents to search multiple websites, compare prices, and find the best deals.
These bots automate the process of price comparison, saving time and effort for the company.
Why Other Options Are Incorrect:
Option A (Virtual reality): VR is immersive and does not search for online products.
Option B (Neural network): Neural networks are used for pattern recognition, not autonomous tasks like shopping.
Option D (Fuzzy logic): Fuzzy logic handles imprecision and is not designed for automating searches.

NEW QUESTION # 193
What is the function of a primary key in a database table?

- A. To manage user access for each table row
- B. To improve storage efficiency for large tables
- C. To identify each record in a table
- D. To connect tables to external systems

Answer: C

Explanation:
A primary key in a relational database table is used to uniquely identify each record in that table. It enforces entity integrity by ensuring that each row can be distinguished from every other row. A primary key must contain unique values and it cannot contain

NULL values. This guarantees that every record is distinct and can be retrieved, updated, or related to other records efficiently.

The primary key serves as the central reference point when creating relationships between tables through the use of foreign keys, thus enabling referential integrity within the database. Without a primary key, it would not be possible to maintain consistent and reliable relationships across different tables.

Option A is incorrect because connecting tables to external systems is not the role of a primary key; this function is handled through integration tools or middleware.

Option B is incorrect because managing user access is controlled by database access control mechanisms, not primary keys.

Option D is incorrect because improving storage efficiency is related to data normalization, indexing, and storage optimization, not primary key assignment.

Therefore, the correct function of a primary key is to identify each record in a table uniquely, ensuring data integrity and reliable referencing across the database.

NEW QUESTION # 194

What is a common risk associated with outsourcing software development?

- A. High cost of developers' salaries
- B. Lack of flexibility to respond to rapid market changes
- C. Short-term contracts that are difficult to renew
- D. Risk of breach of confidential information

Answer: D

Explanation:

Common Risks of Outsourcing Software Development:

One of the most significant risks is the potential for breaches of confidential information.

Outsourcing often involves sharing sensitive company data with third-party vendors, increasing the risk of data misuse or leaks.

Why This Risk is Common:

Outsourcing partners may not have the same level of security measures as the organization.

Compliance issues can arise if vendors do not adhere to industry regulations.

Incorrect Options Analysis:

B . High cost of developers' salaries: Outsourcing is generally cost-effective compared to in-house salaries.

C . Lack of flexibility: Many outsourcing providers are designed to adapt to changes.

D . Short-term contracts: While challenging, these are manageable compared to confidentiality risks.

and Documents of Information Technology Management:

"Mitigating Outsourcing Risks: Confidentiality and Compliance" (Gartner).

ISO/IEC 27001 Security Standards (Data Protection in Outsourcing).

NEW QUESTION # 195

What is a primary purpose of using prototypes in the business analysis process?

- A. To develop the back-end code of the final product
- B. To replace user manuals with interactive simulations
- C. To model requirements and gather early feedback from stakeholders
- D. To finalize the visual design and branding of the product

Answer: C

Explanation:

Prototypes are used in business analysis to model system requirements and gather early feedback from stakeholders. They provide a tangible representation of requirements, allowing users to visualize and test functionality before full-scale development begins.

Option A: Coding the back end is not the purpose of a prototype.

Option B: User manuals and simulations come later in training or documentation.

Option D: Branding and visual design are separate from business analysis.

Thus, the purpose of prototypes is to model requirements and gather early feedback from stakeholders.
